From: "John G. Boehm, Jr." <jboehm@financier.com>
Message-ID: <3522D610.AE2320E@financier.com>
Source record: 164949

Hello and thanks for reading. I have the following for sale.

1.) Yaesu FT-890AT $700.00 OBO
100khz-30MHz Rx
160-10M Tx
I have all supplies including manuals for rig.

2.) Radio Shack Pro-46 Scanner $150.00 OBO
100 channel programmable Scanner.
Excellent little handheld scanner. Covers 29-54, 108-174,
406-512,
806-823.9375, 851-868.9375, and 896.1125-956 MHz.
Still have original packaging and user manual in good condition.

Scanner is in very good condition.

Any ?s or if interested e-mail me at jboehm@financier.com.

Hi all,

Now that I found the right volume-settings of scanner and soundcard I
still receive broken text on the WACARS program. Using the right hard-
and software it still does`nt work smooth....
Is there anyone out there who can help??

Thanks in advance
CU Eric

5. ACLU STIRRING POT AGAIN!

Newsgroup: rec.radio.scanner
Date: 1998-04-01 00:00:00 UTC
From: neutrodyne@aol.com
Message-ID: <1998040119154800.OAA05119@ladder03.news.aol.com>
Source record: 165000

The ACLU is running radio ads spotlighting the reception, recording and release of Newt Gingrich's cell call last year as frightening and dangerous to everyone. As usual, they have not considered the reaction which will gush forth from uninformed politicians and the cellular industry. Keep an eye on HR2369 as it hits the Senate. The danger of the ACLU ads is that the Senate may feel empowered to return it to the totally unacceptable wording it once had! While it is ironic that the ACLU may be unwittingly helping strip OUR civil liberties, they will just look silly while WE will take the consequences if their campaign isn't clarified. They have an open forum @ www.aclu.org, it might help to drop them a note on their message board.

Kenwood R5000 w/utility and cw filters installed. Grove TUN 4 ant tuner pre amp
MFJ dual audio filter $650.00
Radio Shack Pro2006 w/mods $300.00
I am currently looking for Motorola 800mhz STX 821II or Syntor, Smart Net or
Smart Zone trunked radios for trade plus cash for the above .
Contact Randy at rmlac123@aol.com till april 15 or rmlac1@ juno.com
Thanks, Randy.

7. Re: Grove telescopic whip vs. Radio Shack center-loaded whip

Newsgroup: rec.radio.scanner
Date: 1998-04-01 00:00:00 UTC
From: "Eric F. Richards" <efricha@flatland.dimensional.com>
Message-ID: <6fu63u$a9u$1@quasar.dimensional.com>
Source record: 165002

Fbals <fbals@aol.com> wrote:
> Anyone have experience using both for low band (30-50Mhz) reception on
> hand-held scanners? The Radio Shack model has the "center loaded" section but
> the Grove is longer when fully extended to 46". Which works better?

Frank,

I would reluctantly go with the RS antenna. I bought the Grove antenna
because I wanted that spring on the base to avoid shearing off a BNC on
my rig. Unfortunately, that spring is connected to the shield side of the
BNC, DC-grounding the thing.

That's not important at the freq it is designed for, which the bag the
antenna comes in says is 130 MHz+ The spring behaves as a choke and
isolates the shield from the center connection at those frequencies.
(The order sheet had the right Grove part number and included the description
"25-1300 MHz antenna" on the item list, so I got the right one.)

Now all I need to do is find a source for extremely flexible shrink tubing,
take the thing apart, isolate the spring from the shield, put it back to-
gether, and then I'll have what I was hoping I was buying.

8. List of the rec.radio newsgroups (brief)

Newsgroup: rec.radio.scanner
Date: 1998-04-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6fs7ru$5uo@news.Hawaii.Edu>
Source record: 165003
Cross-posted to: rec.radio.scanner,rec.radio.shortwave

```
In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman (KH2PZ / KH6)

>me know.

I've posted this before, but it bears repeating. There are two ways.

1. Take the scanner to your local pawn shop, and get whatever you can for it. Use the money to buy a cell phone. You will then be able to hear every conversation you either originate or receive.

2. Open up the scanner. Carefully pry the main CPU apart. (Just the plastic case - be careful to not damage the silicon wafer itself.) Using an electron microscope and a set of very highly sharpened dental picks, locate and re-arrange the traces that block cellular.

Don't even think about the second method if you've had a drink in the past 48 hours. It needs a steady hand.

Ken Plotkin

17. ACARS WNY Toronto

Newsgroup: rec.radio.scanner
Date: 1998-04-01 00:00:00 UTC
From: kmcbear@buffnet.net
Message-ID: <6fum48vtp1@nnrp1.dejanews.com>
Source record: 165012

I downloaded and installed WACARS software. It works pretty weel but the databases are all filled with codes for Great Britain. Does anyone have a database set up for the Toronto, Buffalo area...I get messages with ground locations auch as Manchester and Soho and stuff..would be nice if it read Buffalo or other actual locations that messasges are being sent to or coming from. Will trade a usable Buffalo / Toronto area map for tracking with Jet routes and intersections on it

What exactly did the ad say? I took a look at their web site and the items that seemed to be related to listening to cell phones were all crypto laws. The ACLU can be an ally in this, if that in fact is their goal. *IF* they are being careful (yeah, yeah, stay with me a moment) they can see that HR2369 can be used as an excuse for keeping crypto laws off the books. They might oppose it for that reason. (EFF has opposed watered-down crypto laws for the same reason.)

Sigh...time for another letter...

It's a dual conversion scanner, 200 channel with hyperscan. Cell mod was
easy. Not a bad scanner. This model is my standard everyday use radio. It's a
keeper. It's on as I type this. There are other scanners much more capable; but
don't walk away from this one in a pawn shop or garage sale.

38. Re: About The John Mackey Issues

Newsgroup: rec.radio.scanner
Date: 1998-04-01 00:00:00 UTC
From: Richard Kendrick <wa7twi@primenet.com>
Message-ID: <3522FECA.4B2EC487@primenet.com>
Source record: 165033

Toilet Boy is the one of the most notorious liars on the Net today. If he can't lie his way out of something, he'll blur the information with disinformation.

KA0SSF--John "My real address is weenie@liar.com" <jmackey@usa.net> vainly attempted to misinform:

> Richard Kendrick & Bill Cheek have canceled my messages!

Reality check! Toilet Boy was caught dead to rights canceling virtually all of his critics messages in the scanner groups. He even canceled a few of his own posts just for effect to make it look like it wasn't him. However, several posts were made by individuals connected with the Erols system showing full path and header data clearly identifying John Mackey as the originator of the rogue cancels.

I have never been identified as a rogue canceler of messages, only someone who has had messages canceled by Toilet Boy. The data on Bill Cheek is inconclusive because the header and path information is nebulous.

> Bill Cheek sent me a post card - I have attached it to the
> end of this message.

The back side of a CB QSL card image bearing a San Diego postmark was posted. The opposite side was never shown. Of the side displayed, there was no evidence that it was sent by Bill Cheek as it wasn't signed. The only link was the postmark (Cheek lives in San Diego).

> Other people have forged my identity to post on this NG.

Several posts were made in Mackey's name that incriminate him in various acts. Some say he has a substance abuse problem and that he takes his frustrations out on the net when he is under some form of chemical influence. Another post had him admitting his homosexuality citing a failed relationship as the source of his bad behavior. Toilet Boy as forged a lot of posts, so his claims that those particular messages are forgeries are not believed.

> Richard Kendrick & Bill Cheek have made up stories about me
> & posted them here.

A prime example of Toilet Boy's brand of hypocrisy. He feels it's acceptable for him to blast people as a fool (his most

common epithet), yet he is supposed to be exempt from negative or critical rebuttals. Besides, he's extremely envious of anyone who can create such humorous and satirical stories.

> Bill Cheek made up lies about me & told them to my sysop
> when I was on Fidonet.

Don't know, wasn't there. Ask Cheek.

> Then Bill kicked me off his fidonet echo (like an internet
> newsgroup).

Confirmed by Cheek and acknowledged by Toilet Boy. If Mackey behaved the same way on the fidonet echo as he does here, it's no wonder he got exiled.

> Eric Oyen & Tim Tyler have complained to my organization
> www.parg.org) about me.

They probably have guessing by the public statements they've both made to and about Toilet Boy. See above about Mackey's hypocrisy.

> I can send you the e-mails they sent if you like.

Press him on this point because he's often said "I can post the evidence" but then never does. Mackey likes to fabricate phony messages in a weak attempt to support himself, like the faked email he claims Cheek sent him a few days ago.

> Bill Cheek broke un-written rules of net manners & printed
> my home phone number on this NG.

More hypocrisy. Toilet Boy knows manners like I know brain surgery. Mackey has the manners of a psychotic hyena on LSD. It wasn't Cheek who posted the telephone number, it was me. Another distortion and lie by Mackey.

> (No big deal though, I am listed in the phone book! -
> so it's public info!!!!)

He made a *very* big deal of it at the time. If it's no big deal *now*, why the stink earlier? Just another Mackey distortion of the facts.

> Bill Cheek complained to a ham radio club which I am a
> member about me, sending several e-mails to the club
> president.

Don't know. Ask Cheek.

> Several people claimed to have gotten me kicked off of
> USA.NET, but that has never happened!

Mackey got the boot from USA.NET, but still uses the USA.NET address. It's easy to forge such a return address. I proved that in another message just to show how Toilet Boy fakes his address.

KA0SSF--John "Queen weenie of Richard Simmonds delightful universe" <jmackey@usa.net> tried to lie and tap dance his way around the truth:

> I was not LYING, it was a software work around to make the
> software function as it would NOT otherwise! At the time I
> stated, as I always have since, that they were NOT legit
> addresses.

Here we go around the Mackey wheel of elliptical logic. Tap dance all you want to Toilet Boy, you can't change this one point: you burglarized a computer system for the intent of gaining illegal access to the Internet. The software work around, while a necessity from Netscape's point of view, is a smoke screen you're attempting to employ in order to disguise your crime.

> Just like you forged my address the other day & stated it
> was a forge.

Ah, but you see you simple minded buffoon, the difference is intent. There was no intent on my part to conceal my actions or my *complete* identity Now my purpose, that's a different story entirely. I know that you're such a dolt that you needed an extremely poignant example for me to make my point. Using your identity worked quite nicely.

> If I am guilty, they YOU are guilty of the same crime!

Your argument is completely without merit or substance. Here again, the difference is intent. You needed to obscure your (ultimate) identity because you were in the act of committing a crime (theft of services). Whereas, my intent was to make a point, not steal services that I had no legitimate access, as you did.

> > That's how I proved you faked the addresses with my original
> > posting (spoofing your identity) to show just how easy it is
> > to spoof an address.

> YOUR own admission of faking MY address/identity.

Let see, the definition of spoof is a light parody. The definition of parody is a work in which the style of an author or work is imitated for comic effect or ridicule. And lastly, the definition of fake (as a verb) is to alter, manipulate, or

treat so as to impart a false character or appearance.

I used the word spoof to describe my actions and fake to describe yours. With the above definitions in mind (which come from Webster's Seventh New Collegiate Dictionary), I held your actions (fraud) up for public ridicule through parody.

> Of course, imitation is the BEST form of flattery!

The only flattery exists in your feeble excuse for a short circuited medulla oblongata.

> > You, again by your own admission, did not have a valid e-mail
> > address.

> Correct, is ANYONE arguing this? NO, they are not!

This is the first half of an equation. The second half is your fraud and theft of services, which you are attempting to side step. Can't have one without the other, Toilet Boy.

> I never claimed to have an internet account, just internet
> access.

Each time you attempt to side step the issue, you just make another tacit admission of guilt for theft of services. No valid account is still illegal access, a crime.

> > In other words, you had to steal access to gain entry.

> Wrong, it was my job to access the internet & test digital
> communications, under contract, for a well known company.

This is a lie to obscure the fact that you burglarized a system. If it was "under contract for a well known company," name the contracting agency and company.

> Or as I tried to tell you below but you were to busy looking
> for a arguement to understand:

I understand only too well. I see through your deception and lies. What you fail to understand, is that since you've made you ignominious appearance in the scanner groups, I and many others have learned, through experience, that you are a liar and a fraud. As such, no one takes anything you say seriously.

> Since your word means NOTHING, that is no big deal.

To you perhaps, but that is not the issue. You've made many statements that have been proven to be lies. It is your word that is at stake here, not mine.

> No just that I do NOT have to give personal data to someone
> like YOU.

Doesn't matter who you give it to. You keep spewing the same lies in the scanner groups, and you'll keep running into the same contempt and derision you have now.

> If an investigator were to contact me, THEN I would be
> required by law to do so & would offer NO hinderance.

As the target of an investigation, you would not be informed or contacted unless you were had some connection with someone else who was the target.

> YOU are not trustworthy for such privledged info.

You're such an oblivious dolt. You have no clue whether or not I am trustworthy. And that will always work to your detriment.

Addanip,
I think what you are refering to is the *mobil extender* that is in some police cars. From my understanding, it is a mobil repeater that allows a base to relay through the car for greater range.
From what I can find, that common frequency is 155.445mhz. I have NOT tried this yet,so I don`t know for sure if it will work or WHAT you`ll hear.
Good Luck & keep us posted as to what you hear.

Probably they are tumbling, and the apparent "burning" happens when
the nozzle is facing you and the remaining exhaust plume (solids don't
shut down instantaneously) is particularly visible.

The Pro-2032 is a nice scanner made by GRE. One downfall of it is that
I do believe that it is only a dual conversion scanner. The full range
of the 800MHz range can be opened up. Also you might check out
http://www.qsl.net/ka2pyj/progamitirxt.htm which will allow you to
program the scanner from databases on the computer. It is a nice
addition.

Its at home and so is the manual, and I'm at the office, but I think the answer to that is "yes". Red/orange/black, maybe. But definitely three wires. One is designed to be hot when the car is on, one is the ground, and the other (the important one in this context!) is always hot...the one that provides for the memory function.

In fact it's DIRT CHEAP!! Ace Communications of suburban Indianapolis sells the TrunkTracker desktop for only $285!! In fact, just about everything this place sells is amazingly low priced. check out their website http://www.ace-communications.com

Tell 'em Jeff sent ya'!

Oh, I know.....there are always silver linings
to gray clouds. But it's still a pisser when some
snotball openly does his dirty work, and it would
cost you more to get justice than what you could
wring outa his hide and wallet.

Right on! And we're taking another long, strong
look at the CE-232 Scanner/Computer Interface. It
still has power and features not available in anything
else. And there might be some other stuff we can
extract from it.

Meanwhile, are you doing anything with the Script
Feature yet? There's one powerful aspect of the CE-232.

If no one replies, and if you already have
the RS center-load whip, then stick a 46"
wire into the antenna port for a good
approximation of how the Grove model will work.

:-)

Here are the specifications of the new Sony Scanner: ICF-SC1PC

supplied by Scanners Unlimited (scannerunl@aol.com)

300 channels - coverage from 25 MHZ - 1300 MHZ (less cellular)

AM/FM/WFM - 10 pages (banks) of 30 channels per page

Triple Conversion - runs on 4 AA batteries

Has 9 pre-programmed service search bands with one-button access

One model is PC interfacable in both directions - computer can operate
all functions of the radio

FREE CD-ROM supplied covering all US Frequencies (may exclude Feds)

Intellilgent active memory system memorizes frequencies where
transmission lasted at least 5 seconds

programming options for changing steps and scan pause time

Direct tuning to a frequency without having to store it in a channel

Backlit LCD display

lockout by frequency (up to 100 frequencies)

comes with antenna, belt clip, AC adaptor, Frequency Guidebook, CD ROM
earphone, and Computer Interface Cable included (in PC model)

weight 13 1/2 oz - Dimensions: 7" X 2 5/8" X 1 3/4"

Availability: late April
Pricing: under $400 for PC interfacable model (approx.)

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscrition services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase costs $34. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

FCC

The database is also available from the FCC for free. It covers most services but not all. Sections can be downloaded, processed with a supplied Visual BASIC program, and viewed with Microsoft Access. The entire database is approximately 3 GB in size. See:

http://www.fcc.gov/oet/info/database/raeddf.html

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited

selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

| PRO DATA

| Pro Data is a database manager program for license data. It does not come
| with its own data but can import data from APF, Percon, ScanWare, and
| UFDBF database files.

| Pro Data costs $60. For more information, write to prodata1@gte.net, or
| visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 630-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. Current data is for first quarter, 1996.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See:
http://www.wvsc.wvnet.edu/~fcc/index.html

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

Message-ID: <Pine.OSF.3.91.980401104917.28708B-100000@leofric>
Source record: 165079

Hi everybody,
Being a relative newbie i was wondering which was
the best possible scanner to buy ?? It should hopefully be under
$2K, have no blocking installed (or if it does, easy to remove),
should be programmable and/or with a decent computer interface,
and should offer the widest possible coverage (scanning range
greater than 1GHz). I would also like the maximum possible
decoding capability of most signals...The maximum possible
scanning range is more important to me than anything else.
Any suggestions ?
Thanks in advance.

Message-ID: <1998040113354700.IAA21623@ladder01.news.aol.com>
Source record: 165082

I wish to purchase a Scantenna or the Radio Shack clone of it. I was told the connection for the coax at the antenna is an "F" type only.

Does this mean I can't use my Belden 9913 with it?

Thanks

"Radio Daze" <40-year-old-fool@nowhere.man> wrote:

:I was searching the UHF band on my handheld scanner about 6pm yesterday, and
:it stopped on 459.975. I heard a woman with a very cute-sounding voice
:speaking. At first, I thought it might be a dispatcher of a wrecker or
:security service, but then I noticed that she didn't break the carrier when
:she finished speaking. A few seconds later, she started talking again, as if
:she was responding to a voice that I couldn't hear. Then I realized that I
:was listening to one side of some kind of phone call. I kept listening, and
:she said something about "waiting for her lawyers to get the deal from
:Warner Brothers." In the information I got from the 60 seconds I listened, I
:realized that she was more than likely a famous singer, she had her young
:child with her, and she was talking to her husband on the phone. Suddenly,
:the carrier ended and the scanner started searching again.
:
:Does anyone have any ideas about what I was hearing? There are no
:celebrities anywhere near where I live. However, there is a major
:north-south highway nearby. Could this be some sort of mobile phone? Could
:it have been a telephone call from a airplane? Any other possibilities?

What you heard was someone making a call from a mobile radio which is part
of a trunking system. It is quite common for that facility to be
available.

>make it even better.

Well, the price is right. It needs major work, however. It's not at all intuitive; and the help docs are not that helpful. I have been messing around with it and I can't get it set up properly. I've tried a few other BC895 without any problems, so I know my set-up is configured properly. I have to admit, that I haven't devoted enough time to figuring it out.

The author says that he looked at all of the other programs on the market and was disappointed in what he found. Me too. Unfortunately, FreeTracker is not THE one that covers all of the necessary bases (easy to use and truely functional database; and a decent looking interface that simulates the radio's buttons/features).

EnterDev product is pretty good, but the database is woeful. The Signal Intelligence product is over- priced compared to the others, yet offers nothing more. Scan cat is rudimentary and the interface is butt ugly. Radio Manager has the flexibility but it is bothersome to operate...

Source record: 164800

First, what part of the country are we talking about? I can tell you that in California, the Uniden is set to the following three mobile repeater frequencies:

154.9200 - I've never heard anything on this channel (didn't sound like vehicle repeater)
154.9350 - I've never heard anything on this channel
154.9050 - most common

However, this is ONLY for the CHP, not local police (no such thing is in use in So. Cal. for local police - that I know of).
And to make matters worse, this method doesn't work anymore. It will only tell you when the officer has already pulled someone over and is out of their car. Almost all CHP cars these days automatically turn the repeater on/off when the officer leaves the vehicle. In the old days, they were on all the time. So basically, you have all the info, but sorry to tell you that it really doesn't work anymore (at least in So. Cal.).

Either I've got a defective unit, or you can count yourself lucky. I'm getting almost as many images from commercial air on VHF-high as I do on my double-conversion BC200XLT. And I get much more bleedover from adjacent frequency traffic than on 'old reliable.'
I don't however, get cellular images (thankfully).

Yep, it is done quite often especially with private EMS and smaller agencies. At the agency I volunteered for, we used airpro software and 900 mhz advisors. Airpro also lets you alphapage your email and has some really cool features.

NO, the original thread was talking about getting a license,
NOT specific to the theory as you state!

> I would highly recommend you reading it also John.

Yes Blake I have the ARRL VE manual & the W5YI VE manual. Being
an accreditated VE under those groups I am REQUIRED to have
their manuals. (and pass a test proving knowledege of those issues!)
Would you like me to send you a copy of one of the manuals
so you may become familar with this area of knowledge? (Being
the Chief VE of our group I keep a few extras!)

hehehe,

you're following the advice of the ONLY person offering opposition to what I have said. That is Blake Bowers, who was NOT even a licensed amateur radio operator at the time in question.

(Blake's callsign of KD4RME was issued in 1996, over 10 years AFTER the time in question according to the database. Also he has NO previous callsigns according to the database)

I was licensed at the time in question as I am now. Plus, I am a accreditated VE by both W5YI & ARRL which requires extensive knowledge in the area of licensing new hams.

Blake's license (codeless Technician, the most basic of all ham licenses) does not require ANY knowledge of VE or licensing issues and those licensees are NOT qualified to conduct licensing testing.

Obviously, Blake is not even legally qualified to have any credibility on this topic.

Yea, please do dig it up, maybe that will keep you busy for a while.

> OK? whats the name of the newspaper (the real name) the edition number,
> volume and date of that publication? Also, what page is the article in
> question on and who was the byline?

I don't remember & I don't care to dig it up either. I do remember
that is was on the front page of a newspaper there on base at
McChord AFB the same day that the Puyallup Hamfest (about a month ago)
was held about 5 miles away. I read it while waiting in a restaurant.
IF you are really that hell bent on finding it then call information
for McChord AFB & ask them what newspapers are on the base & go from
there.

KS Column 0498

Here is what we have for the April Kansas Column:

1. TV cable and scanners
2. SW Kansas 800 frequencies
3. Orphaned frequencies
4. Trunker program details
5. Editorial about trunked radio systems
6. Shawnee County/Topeka trunked system note
7. Did you already know this about KCMO Fire Dept.?
8. The mandatory Springtime list of storm spotter freqs

1. Ask 10 different scanner buffs whether TV antenna cable and associated amplifiers/splitters work for scanners or not, and you will get 11 different opinions. It is a law of nature. Never having studied law, I decided to try it myself and see how good/bad this stuff would work. I had to move some of my junkï¿½erï¿½equipment to another room anyway, so it appeared to be the perfect time for experimenting.
Of course, my need to perform outdoor antenna work is directly proportional to the severity of the weather. Cold is the normal adversary, but wind and ice have been known to rear their ugly heads just prior to any condition requiring immediate attention. This instance was no different. It was cold. Real cold! I hated the thought of moving an antenna or running a new length of cable down the tower in frigid conditions, so I decided to fool Mother Nature and make the changes without leaving the confines of my house. Remember the old Parkay Margarine commercial where Mother Nature becomes irritated when she gets fooled? She whips up a thunder storm and fires off a couple rounds of lightning to demonstrate her displeasure. Since I foiled her attempts to get me to climb a tower in freezing weather I have a very uneasy feeling about the upcoming storm season. Anyway, here is how I did it.
My particular needs required that I move at least 2 scanners for monitoring 800 MHz frequencies. My existing setup consisted of a discone antenna and a length of RG-8 terminated with a BNC connector. Hanging on my wall was a big roll of Radio Shack RG-6 TV coax, along with a bag of connectors and a good quality crimp tool I used to wire the house for TV. I bought an RS #278-115 (BNC gender changer) to hook to my existing BNC connector on the RG-8, and a #278-251 adapter to go from the gender changer to an F connector, and there I attached the "bullet" half of an RS inline amp #15-1117. From that point I ran the cable to the new radio room and affixed the power supply part of the inline amp to that end of it. Another short chunk of RG-6 with another RS #278-251 went between the power supply and the radio, and the results

were great. If there was any loss of signal, I could not tell. It worked for bands other than 800 MHz, too.
The next step was to split it for 2 scanners. An RS #15-1141 splitter/combiner and a couple more short lengths of coax with a RS #278-251 at each end tethered the 2 scanners to the single cable. There was a slight loss of signal, but overall it worked fine. Yeah, I knowï¿½all those connectors! The impedance mismatch! What if the scanners interfere with each other!?!? Those fears entered my mind, but it worked. The way I figure, the amp caught the signal at the same point the scanner normally would have picked it up and pumped it up enough to overcome any loss realized during its jaunt down the RG-6. Splitting it did result in a signal loss, but it is a zero sum game. There is not anything gained without a loss somewhere else. Some of you technical types might disagree with what should have happened, but you cannot argue with success. If I could pick up signals by sticking the end of my coax in 32 pounds of creamed spinach, I would do it regardless of what the engineers say.
If you buy any amplifiers or splitters, be sure to check the specifications to see if they will work with the frequencies you need. Some TV stuff is designed for VHF and UHF only, and not 800 MHz.
---
2. Dale sent a list of state 800 MHz frequencies for the southwest corner of Kansas. This is the first list of such frequencies that I have seen or heard of for anywhere in Kansas other than the eastern third of the state. Apparently Topeka finally realized there are people west of them. Perhaps other areas in the western two-thirds of the state will be getting some attention soon, too. Some of the frequencies might change later on, but for now we can go with this.

The copy Dale sent to me was pretty good, but there were a couple
places where the numbers for the spacing and DPL tones were slightly
smudged, so I cannot claim 100 percent accuracy there. Thanks for the
good info, Dale.
---
3. The last few years there have been a number of agencies that have
abandon their VHF and UHF frequencies for the better (?) trunked
systems. Where do their old frequencies go? Around Kansas City a few
of them have been picked up by other departments. For instance, Leawood
PD now uses Prairie Village's old frequency 453.625, and Shawnee PD uses
Overland Park's old frequency 460.375. There is a whole bucketful of
other abandoned freqs that are available locally, and I suspect some of
them are/will be used. I thumbed through Police Call and various
sources to come up with the following list of those that have recently
joined the ranks of unused frequencies. It may not be a bad idea to
poke them in a scanner and let them stew. You never know when they may
become active.

Law Enforcement frequencies
Shawnee County KS
39.680 39.800
Topeka KS
460.200 460.250 460.350 460.400 460.475
Kansas City MO
154.710 154.740 154.860 154.890 155.640 155.850
156.090
Kansas City KS
155.190 155.430
Overland Park KS

460.225 460.500
Grandview MO
155.550
Johnson County KS
Most of JOCO's VHF freqs are still being used. 158.775 is still South
Zone, 159.030 is now Community Corrections and Juvenile Detention. Some
of the others are still used, too. Once all the JOCO units switch over,
they will be given up.
158.775 159.030 159.150 158.730 159.585

Fire/EMS frequencies
Topeka KS
154.070 154.250 154.295 154.430 453.800
Kansas City MO
154.010 154.130 154.445 460.625
Kansas City KS
153.770 154.175 (I think they still use this one for paging, etc.)

No doubt there are some that I have missed. Let us know if you have
any others that may be up for grabsï¿½or that have already been picked up
by some department.
---
4. Back to the Trunker issue. In summary, I use the Trunker program and
one scanner to visually monitor activity (not the actual audio) of
Motorola trunked systems. I plan on firing up a complete 2 scanner
setup soon, but so far the lack of time has kept me from it. My BC235
TrunkTracker sits next to me so I can listen to activity. It works
fairly well that way. Once in a while the TT and the Trunker program
get out of sync, but it is not a real problem. For some more basic
details on how I have been using Trunker, go to the following website
and check out the Feb 98 KS Column that is archived there.
http://www.crcltd.com/sm0ke/scanner/ What is great about Trunker is its
ability to identify individual radiosï¿½meaning the actual portable,
mobile or base radio. Trunker allows you to enter text for those Ids,
which shows up when that radio transmits. Neat, huh? If you know what
agency uses that mobile or portable, you can enter that and have
"Jonesville PD" pop up each time it transmits. If the agency you are
monitoring assigns radios or cars to be used exclusively by one officer,
or perhaps used only in a certain district, you can put that info in.
When it comes up it might say, "Officer Jones" or "District 9" or
"Pumper 51." It will also allow you to identify units that are on
mutual aid talkgroups, or on talkgroups for agencies other than their
own.
Trunker has several columns of information that are displayed. One is
the talkgroup and another is the radio ID column. In mine, talkgroups
are labeled as well as the radio Ids. This leads to something like the
following examples:

Talkgroup Radio

"SO S zone" "Dispatch" or
"KHP Troop A" "K111-Trooper Jones" or
"MedAct" "MedAct Unit 1105-supervisor"

Additionally, the text can be made to appear in various colors.
Perhaps all Fire units could show up red, while all the PD units might
be blue. You can see the great potential of such a versatile trunk
tracking setup.
If you try this with the Johnson County KS system be aware that south
zone is still on 158.775, but is simulcast on the trunked system. The
audio from 158.775 is pumped into the dispatcher's console and
re-broadcast. When the cars are heard it will display the ID number for
dispatch since there is no actual 800 trunked mobile being used.
---
5. On an editorial note, I remember not too long ago when most of us
were lamenting that trunking was going to ruin the hobby. We cried and
moaned (welli¿½at least I did!) about never being able to listen again.
Now with programs like Trunker, we can monitor with greater detail than
ever before. Trunker lets your scanner/computer combination tell you
all sorts of stuff that would be unavailable when monitoring a
conventional system. It appears that trunked radios systems have
actually enhanced our scanning hobby.
The next advancement that will surely ruin the hobby (like trunking
did?) is digital radio. No doubt there is some techno-scanner buff out
there that is already tinkering with a digital decoder as most of us
(i¿½at least me, anywayi¿½) prepare to lament, cry and moan. The hobby
always seems to lag a few years behind commercial technology, but that
has been the case for years. I think scanning has a tremendous future.
---
6. An anonymous contributor told me that the Shawnee County/Topeka
trunked system now has 2 control channels. That ought to make the old
TrunkTracker gag! They have finally gotten the license, and turned on
the simulcast system with the additional 7 channels. The first set is
the original State system and the second batch of frequencies are the
new simulcast system. The new system is being tested, and when it is
completed the old control channel with go away when the County OKs it.
At that point all 15 channels will be on a single system. It is
conceivable that it has already happened, so if you find only one
control channel, do not bother to read this paragraph. If you look at
Smoke's FTP site, mentioned in section 4 of this column, you can find
several columns with the frequencies listed.
---
7. Kansas City MO FD is on the Ericsson trunked system along with all
other city services, but they are kind enough to re-broadcast their
dispatch channel on 453.050. That should keep you fire buffs happy. I
would suggest listening to fire mutual aid 154.280, too. You will
occasionally hear various department dispatchers carrying on some
interesting traffic. It usually starts out as "business," but soon
becomes much more relaxed.
---
8. Storm season is here, so I will put in the storm spotter type

frequencies for the area around Kansas City. I have essentially no Ham radio-storm spotter freqs anymore, so if anyone out there can provide them I would appreciate it. (They disappeared in my awful mess called my office.)

Johnson County 153.995
Kansas City KS 155.895
Douglas County 155.805
Douglas County 155.760
Franklin County 155.835
Leavenworth County 155.820
Miami County 39.640
M.E.R.S 158.820 (Metropolitan Emergency Radio System)

That is it for this month, but do not forget that the column depends primarily on input from you. Our KS Column is the best out there, if you ask me. So send in anything you have. It may be something that you have known for years, but might be new to the rest of us. Frequencies are not the only thing we need, though. We can use radio numbers, district boundaries, business and federal radio system info, and even a joke or two would be appreciated. To start the bad joke section, I will insert a joke that my little brother, Paul, made up when he was in the 3rd grade.

Q. What do you call a book from Texas?

A. A "Tex" book.

(I told you it was bad!)

Andy

I just picked up a PRO-64 at RadShack for $149.00 with the $30.00 coupon in the flyer.....used a gift cert to and only dropped $130.00 out of pocket for this scanner.....and you know what....Frequencies can be loaded using a shareware program and a simple headphone jack interface from your computer.....brilliant!!! See March Monitoring Times for details on this programming method.

You can also eliminate the annoying beep you get while pressing the buttons by holding down the 2 and Enter key when turning ton the radio. (toggle beep on/off this way).....get one at this price if you can.

Peace,
Skane

Tell me Sal, just whatis wrong with being Homosexual. Personally, I have no problem with them. And whatwould you say if I WAS gay?. Would you try to put me down?

I am only saying that Mackey Bashers Inc. have seemed to have latched onto the homosexual thing as a put down. Seems pretty childish. Last time I heard the "you FAG..." Stuff was about 25 years ago, on the elementarty school playground.

It seems that the Canadian Yupiteru scanner dealers have much higher prices (in U.S. dollars) than the European dealers. I almost bought a Yupiteru in Toronto until I did some comparison shopping.

>In one post you're calling people homophobic and here you're talking
>about fags. You're talking outa both sides of your mouth....

Pretty thin, Sal.

No, my friends who *are* gay often call themselves fags, not considered a slam at all, in fact, IF you weren't so fearful of them (no, you can't catch it by breating the same air, ya' dope) you would find that this term is used quite often.

Rather, to watch a bunch of children (whom and your comrades you appear to emulate on a daily basis) play the "you fag" game, that's pretty disgusting.

It also shows that you have too few brain cells to generate a worthwhile insult. THIS is the point I make.

Obviously it's true, and the truth hurts, 'cause now all you can do is try to pick apart my words in an ill fated effort to insult ME.

I'm not the one who has generated HUNDREDS of messages (as Mackey Bashers, Inc.) have all attempting to insult a person with "fag" "Simmons buddy" (is Richard Simmons really gay?, I never considered it MY business, I really don't know)

Blow steam elsewhere, you are no match.

The Radio shack PRO-90 Trunk Tracker is selling for just over $200.
And from what I have been told is that it is very similar to the uniden.
The PRO-90 from Radio Shack is made by Uniden, but has the Radio Shack
name. I just bought it last week, and I am happy with it. It is my first
scanner so I can't compare it with anything else.

I don't type fast enough to make a transcript and I didn't see one on the ACLU website. WLS is on 890KHZ , 50KW 24 hours a day and I have head the spot several times. I ould think it is on other stations as well.
I haven't questioned the ACLU's motives, but anything negative relative to monitoring cellular calls and telling the general public they should fear it will result in backlash against scanner mfg's and users. As long as the bill is still rattling around in Washington, I feel we are at risk.

128. Wanted: Scanner Crystals

Newsgroup: rec.radio.scanner
Date: 1998-04-02 00:00:00 UTC
From: Paul Curtis <pccurtis@flash.net>
Message-ID: <6g0m6c$r53$1@excalibur.flash.net>
Source record: 164919

Does anyone know of an inexpensive source for crystals for old RS crystal scanners? I am looking for crystals for 460.500, 460.300, 460.400, 162.55.

Paul Curtis
pccurtis@flash.net

129. Serial Interface for the 3COM PalmPilot

Newsgroup: rec.radio.scanner
Date: 1998-04-02 00:00:00 UTC
From: joedgilkey@aol.com
Message-ID: <1998040219382100.OAA11120@ladder03.news.aol.com>
Source record: 164920

Does anyone know of a way to make a serial interface for the PalmPilot. It would have to work on the Pilot Personal and Pro (memory and OS independant). And how to access it on the programming side. All it needs to do is receive serial data.

I am trying to make a POCSAG decoder for the 3COM PalmPilot. Any help would be appreciated.

Sorry I'm having a problem answering Bob - we'll try it again - darn url
link won't work properly for some reason...

Anyway - thanks for gettng 4! RadioRESTs - you must like portable gear! :)
Our heartfelt gratitude...

Those looking for us, can find our web site at:

http://www.geocities.com/eureka/enterprises/3830

I haven't advertised RadioREST on the web very much (hardly at all) because,
as you know, we distribute them primarily at hamfests, swapmeets,
etc...sorry for being hard to find...We'll try and keep a "greater presence"
in the groups from now on...

Well, let's see if this message "took"... :)

Take care, and 73's

John (WA6SPA)

I never actually go by pin number. I just check the labels on the
underside of each trace.

If you do want to work by pin number, I believe the list is included with
the FCC certification documents. A letter to the FCC ought to get them.

: > http://www.dejanews.com/ Now offering spam-free web-based newsreading

: It's a dual conversion scanner, 200 channel with hyperscan. Cell mod was
: easy. Not a bad scanner. This model is my standard everyday use radio. It's a
: keeper. It's on as I type this. There are other scanners much more capable; but
: don't walk away from this one in a pawn shop or garage sale.

One thing to watch out for....If Cell rx matters to you....watch the date
codes...while MOST 2032's are modifiable, the last run was NOT!
Although...the 2032, like most double conversion scanners, will receive
images quite well.
BTW, the 2032 is a decient scanner, allthough I'd hate to have to use one
as my primary scanner.
I DO own one, but mostly because I got a VERY good deal on one.
I do like it, as a secondary unit.
I do agree with the other poster though:if you find one at a good price,
don't pass it up.
Keep in mind that I'm a bit "spoiled"-I use 2006's for most of my
monitoring, and most other units just don't measure up to them.

Try any common control cleaner(AKA TV tuner cleaner).
Put a little right on the sticking button, then push the button to work
the cleaner in.
With a bit of luck, the button should free up.

If you were trying your best to keep the scanner from being
detected, it would be best to have it computer controlled. Keep the
scanner in a box made out of copper that is very securely grounded.
Have the RS-232 cable run into the box along with an extention cord
and the antenna cable. The better the ground the better the chance of
not being detected. This should provide a better ground than any
mobile detection unit which aids in stealth. Make sure all seams are
well soldered.
Use gold foil instead of tin foil to line your hats. The gold
foil has a better chance of catching all of the fluxes eminating off
of the cranial implants. Oh, and did you see in the obituary section
of today's paper...ppl died in alphabetical order AGAIN! Its a
conspiracy I tell you. I think that it is actually a computer
generated 'hit list' that the mobsters work off of. People didn't used
to die in alphabetical order. Mobsters and the government are now
using complex databases to go off of.

First off, the John Mackey that frequents this newsgroup and I, S.
John Mackey are two different people-- honestly. I've been aware for
quite sometime of the animosity felt towards the "scanner" John Mackey
in that my own personal net kook from last year, some psychopathic
Guinea Pig breeder whom I locked horns with in a alt.tv.* newsgroup,
wanted so desperately to smear me, she lost sight of what she was
doing and wrongly deduced that your John Mackey here and I were the
same person. Anyhow, it was apparent then to any one who cared, she
was mistaken... well, thanks to her archived messages from that
ordeal, this DiFilippo nut has apparently decided the same thing.
(This is why you guys are suddenly getting all the irrelevant posts,
for that I apologize... especially by propagating this thread further
with this explanation... please forgive that as I will try to be
"readers digest condensed as possible").

Anyhow, DiFilippo is fixated on another local here in the Triangle Area-- there is absolutely no way to consider DiFilippo's collective USENET contributions, particularly with in the past 8-10 weeks and NOT conclude he is, in laymen's terms, "a troll".

The object of DiFilippo's obsession is the [original] Gumby Dammit . Gumby make's no secret about his name, Keith Sload... I've been acquainted with Gumby via our regional newsgroups (the triangle.* hierarchy) for at least a year and a half-- admittedly he can be a little wry and touch sarcastic, but that's generally beside the point since he's virtually always ACCURATE in his statements... I am personally convinced, his motives in ANY STATEMENT that equates to commentary regarding a business of any sort are the consumer at large being as well informed as possible-- that, of course, is largely the spirit of USENET to begin with... so even essentially, even "CCS NETWORKS" posting *commercial* for sale ads to a newsgroup originally chartered for private individuals to notify of intent to sell via a *non taxable* transaction, is interpretable as inappropriate to begin with... but I suppose that's really beside the point-- and of course, that's very arguable, so I'll not expand that thought any further.

In any event, DiFilippo is not only wrongfully smearing the established USENET personality, "Gumby" (who's dejanews author profile yields subscription to alt.collecting.beanie-babies, triangle.forsale, triangle.general, and the like...) he's decided that since I've spoken in Gumby's defense via follow-up USENET posts, that he'd like to smear me (S. John Mackey) as well.

DiFilippo repeatedly demonstrates his propensity to make sloppy errors-- for instance, I noticed him inferring that someone had canceled a post he made here (under another assumed 'Net identity at that) but the bottom line is he DIDN'T post it here, he posted it to the non-existent group, . Whatever, ya know? Not only is he a loon, he's an idiot. (There are many other examples, but I'm already taking up much more of your time than I'd intended). This is the foundation on which he decided getting the inhabitants of this newsgroup since they by and large dislike A "John Mackey"... of course since I don't frequent this group, all he's doing is wasting time entertaining(?) you guys... Honestly, if most of his spew wasn't cross posted into newsgroups I DO frequent, I wouldn't have even thought to look here... alas, its was and I did.

The bottom line here is that "Gumby" antagonized the lunatic that is DiFilippo (the "administrator" of ccsnetworks.com, a virtual domain... with a "cursed with Javascript errors" web site at that) by simply commenting on how entirely over priced the used merchandize he kept attempting to pawn off through triangle.* and other "forsale" group really is.

Anyhow, it's a very sordid tale, but the end result is that DiFilippo has totally cracked and is fixated on making "Gumby's" net life hell... he frequently changes his "from" headers in such a way that

conveys someone ELSE'S established net personality... and is constantly attempting to "win" a game that ended with the indisputable facts that Dick DiFilippo was trying to unload used computer equipment at inflated prices in comparison to local market value. Of course, he has every right to attempt to make as much profit as he sees fit, but I've never observed such a lack of professionalism in defending his high prices, nor have I ever before come across some so inept at facilitating a battle like this, nor lastly, can I imagine any individual doing all this in tandem with their presumed business-- I mean, geez, even if DiFilippo WAS right in the first place-- which he wasn't-- you'd think he'd be making every effort to DOWNPLAY any such controversy since the very association of this situation, which HE'S INVENTED reflect poorly, very poorly, on HIS COMPANIES reputation.

Until very recently, all of his messages were originating from an internic.net registered IP, and the NNTP Posting host blatantly established it was, indeed, HIM... I presume now that the utter frustration all this bull is causing his ISP, has encouraged him to use a secondary dial up account established with mindspring... his internic registration for the IP <209.42.210.65> indicated that he would be the user calling itself "sysadmin" @ mindspring.com... so this isn't unexpected.

Anyhow, now y'all know.
S. John

Whoever was responsible for that story in it's original form, you've
been plagiarized. I'd encourage you to contact Mindspring.Com (as this
is why I've provided full headers in the above quote).

Thanks Again,
S. John

Has anyone heard of agencies like police, fire, EMS, forwarding emergency dispatches to the public thru pagers and stuff like that? I saw a WebPage a few weeks ago, couldn't find it anymore... Someone point me in the right driection, I know this is possible and paging companies do this for a small fee. Thanks

Source record: 164952

Hi John,

I'd go visit Tandy's homepages and download the 3-D "exploding"
view of the whole scanner,parts and all.....

You will find useful info on other aspects of the scanner too..
But no "mod" - info :))

Chances are a bit alcohol on a soft cloth will remove the dirt
and clean up the contacts under the keypad. Also make sure the
keypad itself is cleaned from grease and dirt....

A really great peace of scanner that there, made by GRE ! :)

Regards,
Knut

Uniden Bearcat BC 100xlt Handheld Scanner

Features: -New NiCd Battery Pack
-(1) VHF Rubberduck Antenna
-(1) UHF Rubberduck Antenna
-Earphone (extra length)
-Wall Charger
-Original Case

Radio Features -100 Channels
-10 Ch./bank, 10 banks
-Weather Search
-29-54, 118-174, 406-512 Mhz
-Band Search

The radio has had some use and I'm proud to say, I've taken good care of
it over the years. Everything works perfectly.

I'm asking $100.00 firm for this beauty. It is a very useful radio and
will give you years of quality scanning.

Please EMAIL me or CALL me at (305)895-4355 between the hours of
10:00am & 9:00pm.

73,
Bill

161. Police Scanner for sale Pro 2005

Newsgroup: rec.radio.scanner
Date: 1998-04-02 00:00:00 UTC
From: tglunz@#cybernw.com
Message-ID: <3523d7e4.6623595@207.126.101.101>
Source record: 164954

A Pro 2005 base set, 400 channels, good shape, full capabilities, only problem is the back light is very dim. I don't use it any more, I've got enough radios already so $250 or best offer takes it. low ball offers will be ignored, if you know what this is you know what it's worth.
I would prefer a local sale to avoid all the hassles of shipping and so you'll actually see before you buy
The Pro 43 is sold,thanks.

Okay, the time has come to retire my old RS mag mount mobile and get a quality one. I am looking for advice from experience as well as general price and where I can get the antenna. Here are my requirements:

Magnet or trunk lip mount (will have to go on trunk or hood no matter what)
Prefer all-band, but I mainly listen to VHF low
Prefer cost under US$75
No cellular clones or antennas of dubious quality

Feel free to post and/or email. Thanks!

>What exactly did the ad say?

It was very close to the ad about Linda Tripp recording Lewinski's calls, same style. Except it was about cell calls being recorded. It ended with the typical "Do YOU want to live in a society where you have to worry about your private phone calls being printed in the newspaper" or something very much like that. the ads are on WLS-AM.
They may well be after crypto laws, but the ads are so broad and ill concieved, Joe Public and Senator Dimbulb are going to hear this ad and think "Hey, I saw a bill that's ready to pass about this, lets fix it right now!"

Radio Shack's frequency book lumps all L.A. city frequencies together.
Lots of em. Anyone know which ones DWP uses, will need to know when
the lights / water are coming back on.
Thanks in advance.
Mark in North Hollywood, CA, USA

Please post a site where we can read this alleged atrocity by the
ACLU. I suspect there's a bit of hyperbole involved in this report.

This guy advertised two scanners for sale back in February.
A Radio Shack Pro-2041 and 2032. He confirmed receiving my
M.O. then fell off the face of the Earth. Won't answer my e-mail
or anything. Anybody else deal with this guy?

His e-mail address is snakpit@aol.com

You know how there are Pocsag Decoding softwares out there? HAs anyone seen one for FLEX? OR GOLAY?
Also, I have a Pro-51, i think I screwed it up somehow, it seems to recieve frequencies about 1MHz lower than where they are supposed to be... Can anyone give me some suggestions? Thanks

You'll be pleased to know that I got the first version of WACARS with Airmaster support running last night. At the moment this uses the DDE interface from the Airmaster 2000 software, so you need to have both running at the same time. The soundcard interface works at the same time so you could potentially have two different RX's running at the same time. There are a few issues left to sort out before it's ready but it shouldn't take too long.

<whack>

Now, now, Opie,

Control yourself, you'll break out in a rash or something. This homo
stuff sure gets you going, you sure you ain't got homosexual
tendencies? Usually the ones that protest the loudest is the closest
to being a Nelly Belle themselves. Maybe you ought to hook up with
that psychologist that's lurking here studying Macko the Whacko.

Hi Mike,

Thanks a lot, we didn`t know you were busy with it, thats why some of us
were
bombing your mailbox with these questions........

Well, I`ll be patient en will eagerly watch your homepage for the time
being,
but maybe you`ll mail me when the job is done...or you can use the
newsgroups ass well of course.

Anyway thanks a lot, we, the acars-hobbyists, owe you one at least
something in return......

Some people got nuttin' better to do with their time. It's like my theory of the Middle East. Those people need a hard, ass-busting winter with a snow of about 21" or so. That would take their minds off all their bickering. They don't even have houseplants or aquariums.

THIS country needs a good revolution. People gots too much time on their hands because the gummint does everything for them.

>snip<

If the dealer and/or his/her customer are stupid enough to broadcast their deal they will be caught soon enough without your help. There is a good chance the the cop cruising the dealers beat was listening on the cell freqs all night long and could have heard that and/or a whole lot more.....and probably couldn't care less about it.

Please don't bring any undue attention to the hobby....the media will screw it up and the politicians will use it for fodder to push their total control agenda.

Peace, and happy monitoring,

Skane

>3) Handheld - Realistic 200ch Pro 39

The Netset Pro-46 (sold in the States as Radio Shack PRO-46) can be modified if it is the same model sold stateside. Look at the frequencies covered by your radio as it is marketed. Then with the radio off depress the 2, 9, and L/Out keys simultaneously, while holding down these keys turn the power on. (WARNING: any user programmed frequencies will be deleted at this point, write'm down first.) In Banks 1, 2 and 3 you will see a set of test frequencies. If any of these frequencies fall in a band that has been censored from your radio (i.e. you can't program directly by the keyboard) you can store frequencies from the test freqs into empty channels and use them as starting points for direct searches using the up/down arrows.

Here in the states older PRO-46's (mine has date code 7A3) can search the otherwise censored cell freqs and the euroband 66-88 MHz range using this method. You only need to do this once. Reserve a bank to put the high and low limits of each censored freq. You can get to them by doing a directional search as listed above and as you reach the limit (hi/lo) open the squelch and step to the highest and lowest freqs in the range and then hit MONITOR to temporarily store the freq in one of the ten monitor freqs.....then in the bank of your choice store the monitor freq by choosing the channel you wish to store freq in and pres PROG, MONITOR, ENTER. You can now use these channels as your start off point for searching the censored band. as you come across active channels you can store them in monitor banks and program into scannable channels as you desire.

Sorry for the rambling post......flow of conciousness.

Peace,

Skane

Yes, YOU certainly are!

Always in the past, when given the information you request, either you don't understand it or you find some off-the-wall reason to not believe it.

I don't care to play YOUR game AGAIN! If YOU want it then YOU find it, I told you EXACTLY how to do it!

In other words, PUT UP OR SHUT UP!

FOR IMMEDIATE SALE

ALL PRICES OBO - MAKE ANY OFFER

The following books are from the inventory of a closed mail-order bookdealer. None are used; all in perfect condition unless otherwise specified. Satisfaction guaranteed or full refund.

List revised 10:30AM, Thursday, April 2, 1998

Rider's Radio, misc. volumes #6 to #15. Condition varies from fair to like new with most being in excellent condition. $25 each, shipping paid. Inquire as to availability of particular volumes.
The Radio Amateurs DX GUIDE, 14th ed., 1981, by Radio Amateur Callbook, Inc., 46 pages. $3.
Radio Amateurs Complete Map Library, circa 1981, by Radio Amateur Callbook, Inc. List $4.50. $2.
The Hexadecimal Chronicles, Don Lancaster, Sams 21802, spiral bound, list $17.95. $2.
Microcomputer Primer, Waite & Pardee, Sams 21653, 2nd ed., 4th ptg, 1982, 384 pgs, list $14.50. $2.
Battlestar BASIC for the TRS-80, Dasenbrock, Sams 22006, 1983, 102 pgs, list $12.95. $1.
Timex Sinclair BASIC Primer with Graphics, Waite & Chapnick, Sams 22077, 246 pgs, 1984, list $9.95. $1.
The ARRL Extra Class License Manual, 1986-1987, 258 pgs, list $5. $2.
Broadcast News Handbook, Donald W. Miles, Sams 21183, 1975, 390 pgs, list $10.95. $2.
The Beginners' Handbook of Amateur Radio, Clay Laster, Sams 21569, 1979, 384 pgs, list $10.95, $3.
Radio Astronomy for the Amateur, Dave Heiserman, TAB 714, HARD COVER, 1st ed., 2nd ptg, Jan. 77, list $8.95. $5.
So You Want to be a Ham, Robert Hertzberg, Sams 21600, 8th ed., 1st ptg, 1979, 192 pgs, list $7.95, $2. (I read an early edition of this book in the public library around 40 years ago)
Fifty Years of ARRL, pub'd by ARRL, 1st ed., 3rd ptg, 1981, 152 pgs, list $4. $2.
From Tin Foil to Stereo, Read & Welch, Sams 21205, 2nd ed., 2nd ptg, 1977, 544 pgs, list $9.95. $8. Damaged front cover, $7.
Communications Monitoring, Robert B. Grove, Hayden 0894-5, 1979,

116 pgs, list $5.95. $3.
Communications World, 1981 Edition, Davis Publications, 118 pgs,
list $1.95. $1. Contains White's Radio Log.
Financial Planning for Super Calc and the IBM PC, with 5.25"
disk, Sams 22061, list $49.95, $2.
100 1980's 5.25 inch floppies with IBM compatible DEMO software,
$5 plus actual shipping cost; over 1000 floppies
available. Value limited to historical significance.
Vintage Radio, 1887-1929, Morgan E. McMahon, 2nd ed., 1973, 250 pgs,
HARD COVER edition $13.
Easi-Guide to Snowmobiling, Sams 21221, 1975, 144 pgs,
list $3.50. 25 cents.
OSCAR, Stratis Caramanolis, translated from German by Colin Newberry,
190 pgs, 25 cents.
Broadcast News, Donald W. Miles, Sams 21183, 1975, 385 pgs, $2.
Electronic Circuitbook 1, Project Constructions, Forrest Mims III,
Sams 21241, 1976, 95 pgs, list $4.95. $2.
Second Class Radiotelephone License Handbook, Edward M. Noll, Sams
21722, 6th ed., 2nd ptg, 1981. (FOR HISTORICAL REF ONLY) $1.
BYTE Magazine, Any full year, 1978-1981, $25.
Photofacts, Howard W. Sams, #1-150, 600-1400, with some exceptions,
USED, good condition, any number (e.g., #23, #1004, #1350),
$8. Any folder (a particular radio, TV, etc.), $4.
Any 100 consecutive numbers, $400.
Telephone Accessories You Can Build, Gilder, Hayden 5748-2,
9th ptg, 1981, list $7.25. $5.
More Telephone Accessories You Can Build, Gilder, Hayden 0893-7,
2nd ptg, 1981, 128 pgs, list $5.95. $4.
North American Radio & TV Station Guide, Vane A. Jones, 14th ed.,
Sams 21725, 1st ptg, 1981, list $7.95. $3.
Same title as above, 15th ed., 225 pgs, 1984, list $9.95. $4.
Novice Class Amateur Radio License Manual, Anderson, Sams 21529,
1st ed., 2nd ptg, 1979, list $3.95. $2.
World Radio TV Handbook, Billboard Publications, 1983 edition,
540 pgs, $3 or 2/$5. Some other years are available when
they surface; ask for specifics on 1979, 1981-1990. Other
editions $5 each; addtl copies $4.
The IRCA Almanac, 2nd ed., 1980, list $9.95, $1.
Perfect Guide to Perfect Writer, Meilach, Sams 22186,
1st printing, 1984, list $16.95. 25 cents.
Programs for Beginners on the TRS-80, Blechman, Hayden 5182-4,
2nd ptg, 1981, list $8.95. $1.
TI BASIC, Introduction to; Inman, Zamora, Albrect; Hayden 5185-9,
2nd ptg, 1981, list $11.95. $1.
Dr. Dobb's Journal of Computer Calisthenics & Orthodontia, Volume 5,
Hayden 5492-0, list $22.95, $7.
Radio Angels, Stack WA6IPF, Ham Radio, 1st ptg, 1978, Only $3.
FM Atlas and Station Directory. 4th ed., Dr. Bruce Elving, $5.
5th ed., $3. 7th ed, list $6.95, $1. 8th ed., 1983, 128 pgs,
list $6.95, $2.

Optoelectronics Guidebook---with tested projects, Fox, 190 pages, HARD COVER, lst ptg, Jan. 1977, TAB 836, list $8.95. $6.
Introduction to Medical Electronics---for Electronics & Medical Personnel, 2nd ed., Klein, HARD COVER, lst ptg, Jan. 1976, 310 pages, TAB 830, list $9.95, $5.
Basic TV Course, Kravitz, 222 pages, TAB 105, 9th ptg, April, 1980. List $7.95. $4.
The Fascinating World of Radio Communications, Wayne Green, HARD COVER, 176 pages, TAB 586, 1st printing, Oct. 1971, list $6.95. $5.
The Handbook of Radio Publicity and Promotion, Macdonald, TAB 213A, 3-ring binder, 370 pages, 4th ptg, May, 1981, list $34.95, $8 OBO.
Hear All the Action, Waterford, Sams 21535, 128 pages, 1st printing, 1978, list $6.50. $4.
Guidebook to Small Computers, Barden, Sams 21698, 126 pages, 2nd ptg, 1981, list $4.95. $2.
A DXer's Technical Guide, IRCA, 2nd ptg, 1981, 98 pages, list $10. $1. Same title, 2nd EDITION, 1983, $4
Electronics Quizbook, Graf & Whalen, Sams 21204, 1975, 64 pgs, list $4.50. 25 cents.
IRCA Almanac, 2nd ed., 1980, 168 pgs, $1. Same title, 3rd ed., 1983, 164 pgs, $2.
IRCA Foreign Log, Volume 6, 7, or 9, est. 160 pages, 1978 to 1981, $2 each; specify volume number.
Radio Communications Receivers, Cornell Drentea, TAB 1393, 1982, 280 pgs, list $13.95. $6.
Beginners RTTY Handbook, RTTY Journal, Jan. 1982, 86 pgs, $4.
Basic Business Software, E. G. Brooner, Sams 21751, 1st ed., 2nd ptg, 1981, 140 pgs, list $11.95. $2

NO, it was about 4 months after I arrived here that I was asked for
them, or about 2 months after Bill Cheek was asked to give HIS. But
Bill NEVER DID give his credentials. So what is good enough for Bill
is good enough for ME. If Bill gives his (& they are verified as
authentic) I will give MINE IMMEDIATELY!

Obviously, you have NO idea what you are talking about!

In Monroe County NY, the agencies here all use plain english. I think
the rationale behind this was that in emergency situations, information
can be better conveyed using everyday speech, rather than being
distracted by remembering what the 10-code is for "Officer needs
assistance".

The people who should REALLY worry are the ones doing the scamming. In just the last few weeks an article appeared in the newspaper about a man who traveled some distance to KILL (and in fact DID kill) an individual who ripped him off over RADIOS of all things.

Maybe that's where snakepit went.

SCAMMERS BEWARE, you may end up DEAD!

CORRECTION:

I inaccurately stated in the last post that the person who killed the guy that ripped him off travelled to do so. In fact he mail bombed the kid that ripped him off, killing the kid and severly injuring the kid's mother.

Different method, same results, don't rip people off, and chances are, you won't be opening a mail bomb.

Hi All - This is a reminder of the radio meeting to take place in Seattle on Sat. April 4th. at about 12:30 - 1:00pm.

The meeting will be at Aurora Family Restaurant at 8800 Aurora Ave. North. From I-5 take the North 85th. street exit. You will be heading East. Continue about a mile to Aurora Ave. and take a right. You will see the restaurant on the East side of the street. I will make an effort to listen to the 146.96 and 444.3 machines. Hope you make it, there will be much discussion on and demo's of the Puget Sound 800 system.

nospam@abc.com writes:
> who are legit companies to import from?
> how can i import and not get scanner confiscated?
> what are the chances? what triggers a search?

If you are trying to buy a scanner in a foreign country and have it shipped to you, you probably won't have much luck with Customs - the seller is required by law to file an accurate description of the contents of the package, and remember that the buyer assumes all risk of confiscation - the seller gets to keep your money regardless, so don't expect them to put themselves at risk by filing a fraudulent declaration. Customs is definitely on the lookout for imported scanners these days (since mid- to late-December 1997) and has lists of the dealers involved.

You might have better luck bringing a scanner in as part of your personal baggage, but as I now understand it, that is illegal as well. At best, it'll get confiscated. Presumably there are penalties for false declaration as well.

There are mods posted (and also findable with Excite, etc.) for many scanners. If you really feel you need to listen to prohibited frequencies, see what mods are available for units you're interested in.

Personally, I think your time/money would be better spent lobbying your Congresscritters for sensible regulations (for example, listening to anything is permitted but new phones must ship with strong encryption).

Try Radio Shack. They used to carry crystals but you have toorder them
through a catalog. Service is prompt and they cost about $5 if I
remember correctly. Just be sure to have the model number or the
proper IF for your radio.

>You'll be pleased to know that I got the first version of WACARS with
>Airmaster support running last night.
snip
>

Hi Mike,

I am following your developments with much interest. Your program
WACARS looks very good but will not run very well on my machine. Only
about 30% or less character decode.

I am running here a 486DX-50 with a local bus video card, ESS1688
sound card, Windows 95a.

With WACARS my CPU loading is 100% as shown by Win95 CPU monitor.
Incidentally I have also run KRACARS which shows 35% CPU use and
decodes 95%.

Re: the Airmaster support/decoder. I assume it is something like the
Hamcom interface? Someone may like to clear up my understanding.

As others have said, a serial interface from a modem would be nice
also. I have an AEA (Timewave) DSP-232.

Whoooooeeey, if I were you (which I ain't), I'd
heist myself and my scanner down to Radio Schloque
and either get it fixed or swap it for another one.

You got time still. But you won't always....

> I don't however, get cellular images (thankfully).

Small consolation, I guess. But that complicates
the issues around why you get the aero images.
Now that is weird, if you ask me. I'd get it
fixed or replaced, if I were you.

True, C.O.D. does nothing to insure you get what you expect/want.

However, since my original post, things have changed. Supposedly there
was a "mistake" or "communication" problem. I'll keep you all posted.
The point in all of this is that it would be nice to keep the Internet
a safe and fun place to exchange and talk about our favorite hobbies
and toys. Most of us (I'd like to think) are on the up and up, the few
that are not...make us all weary amd look bad.

I was looking at radios at a local electronics store and I was wondering, does a transceiver have more or less the same functions as a scanner, as well as transmission capability? I figured if I was going to spend the money, I might as well get a radio that can receive and send.

If anyone has any info regarding this, it would be appreciated greatly.

Thanks in advance,
Jeremy <merlich@rohan.sdsu.edu>

>
> Does this looks like a small black bug with 16 legs?

I'm having a little difficulty determining exactly what it is you're after here. If, by "headphone" jack, you're refering to an audio output for an external speaker or headphone, then the scanner already has one - between the antenna jack and squelch control knob.

If what you require is access to the raw, low-level, unfiltered audio output, then you will have to access the point mentioned in Bill Cheek's file. This chip is between an orange cube and a separate, small circuit board in the rear of the scanner. You will have access to it by taking the back off of the scanner. Pin 1 will be at the top left of the chip, pin 8 is bottom left, pin 9 bottom right, and pin 16 top right. This scanner uses the small, surface-mount version of the chip, and only individuals with very good soldering skills should attempt to attatch to it.

Whether you require the unfiltered audio or the regular audio connection will be determined by the type of signals and data you wish to work with. The HamComm program will be of very little use to a scanner operator, as its purpose is to decode data transmissions found on the shortwave bands. If you wish to work with DTMF (touch) tones, the older paging tones or 1200bps Amateur Radio packet, then you can get by with a simple connection to the speaker output of your unit. If you wish to decode the paging services providing high-speed text or data, MDTs (Mobile Data Terminals), 9600bps Amateur Radio packet, CTCSS (sub-audible tones) or any of the more complex data transmissions, then you will have to install a socket on your scanner that's connected to the unfiltered audio point using Bill Cheek's information. You will have to obtain the appropriate freeware/shareware to operate your HamComm-style interface on the mode you want to work with. An example of a program that will work with the regular audio output of your unit is:

ftp://ftp.funet.fi/pub/ham/packet/misc/pktmon12.lzh
This package will allow you to monitor the standard 1200bps Amateur Radio
packet transmissions found on 145.010 MHz and other nearby frequencies
in North America. I hope you are familiar with files compressed in .LZH
format (similar to .ZIP), and can extract the files within it.

I just bought a BC 855 XLT without an instruction book. When I turn it on it reads (scan lockout 000.000) Can anyone tell me how to unlock it and program it. I beleve it is unblocked. but not wure.

Thanks

Wrong, you blithering idiot! A guy in Indiana sent a mailbomb to a kid in
New Hampshire who ripped him off for CB gear - killed the teenager and
injured him mother. He did NOT travel some miles to KILL! Get your head
outta yr arse and get your facts straight...

Aw, you shouldn't talk to Obladee-Fada that way. You'll hurt his feelings (it's easy to do). In any case, he's as wacko as they get so you better not get him mad at you. No telling what he'll do.

Revolution does not HAVE to be military. In fact in the USA revolution should not be. The constitution grants the people many rights, among them the ability to shed the weight of government when it no longer serves the people. Besides, there are nearly 300 million people in America and only 2 million in the armed forces; I doubt many of them would want to detain or kill 150 citizens each.

I am not promoting revolt, but when the government becomes more of a hindrance than a help the people have the power to overthrow it.

I bought a Pro-37 at a yard sale for $25 bucks. Seems to run OK. Looking back at past (old Dejanews setting) posts on Pro-37, I saw some article about a modification to "restore full 800 MHZ" band. Checking the bands shown on the back of this used portable scanner, it breaks the 800MHZ band into several gaps ranging from 806 to 899 and to 960MHZ.

Will the "modification" allow me to get ALL of the 800MHZ or simply the cell freq's that were "outlawed" ca 1993 (to enhance the value of cell phone stock --which it did)? This Pro-37 looks to be vintage about 1992. Or, does the Mofification FAQ instead restore later model Pro-37's to get the same 800MHZ freq bands that my (earlier and older) Pro-37 already gets now?

Also, when the local police changed their freq's a couple years back, did many of them land in the 800MHZ bands --and for which the "modification" could be useful?

Another question. If this Pro-37 was originally sold say 1991 by Radio Shack, what was the eventual best successor (best portable scanner) that RS sold --and which got the completest bands? My guess is that, now, ALL scanners are not as good as ones that are 8 years old because Fed laws are outlawing scanning of certain frequencies? Thanks!

Hey Dip,
Wait just a minute ! I WAS here when this all started. I HAVE read Cheek`s credentials, ONLINE & OFF. I verified them to MY satisfaction after doing research on Bill. I now know more about him then I know about my own uncles.
And best yet, It ALL is correct and TRUE, he IS smarter then you, he DOES have a better job, HE helps people with GOOD information, HE don`t START trouble (he don`t walk away from it either) & HE is HONEST and open to non-Mackey types.
I know the names of his parents, where & when he was born, the names of his schools (the ones he went to & the ones he TAUGHT AT), his war record (where, when & rank), his well-known work with law enforcement & satellite & space engineering.....ect....ect...ect...
It`s all public record. ANYONE can look it up. (Have someone read it for you,John)

And now, John, It`s your turn !

Your no more than a little wart on the ass of a man like Cheek ! Your verbal abuse of people on this ng shows your limited dealing with people and life as a whole. Your a sore loser that wouldn`t admit to being wrong, even if it to be a matter of life or death. A CHILD, not a man!
You are the son of a very sad man, John Mackey Sr. The thought of you having the same name, & turning out like you did, broke his heart. With his life savings in hand, he tried to send you to school & give you a respectfull life. To belong & help fellow mankind.

What did you give him in return? Yes, a very sad man was he indeed. I hope God had mercy on him, for you sure didn`t. Not willing to admit that your father was a good man & knew he had to try & kill you while you were a pup, you moved several times during your life.

Your Beaverton, OR. address was a last ditch effort to avoid your father before his death, fearing that he would find you and make *the final cut*. Your failed marriage thankfully did not produce any offspring. (we all know why, he he he)

You DID, however, see the need for a higher education and were *self taught* in the three main buiseness management ideas (so you think) of Cheat, Lie & Word Management. You lied yourself into a janitor job, working late-nights. Your training on the day-shift brought you close to a man named Bill. A gay man also stuck in a dead-end job.
Among other things, (sick) he showed you how to find gay porn on his computer, then to a gay ng. You paid close attention to how he accessed the net, not missing a stroke. Then, after six months of mop training, poof.

Off to night-shift with you.
Not having anyone around & you feeling horny, you started stealing computer access to get to the ng`s. One night around 2 or 3 years ago, (after inhaling concentrated vapors of WINDEX) you couldn`t find the gay ng & stumbled into this ng by mistake.
Still high on the fumes, you read a respond from Bill Cheek, a smart man indeed. Almost father like. Your thoughts turned to your gay *friend* Bill on day-shift, and started to sob, as Bill would not transfer to night-shift with you. You turn angry & bitter.
You now HATE smart, father-like, straight men. You lash out at anyone with an IQ of more then 130. And if the name is *BILL*, you will hunt them down to the ends of cyber-space.

That is how you ended up here. Since YOU wouldn`t show your credentials, I`ll post them for you. The only difference is, Cheek DID show his. You just didn`t want to look.Now I don`t expect you ,John, to believe me, as I`m not dumb or gay, so why don`t you look it up yourself?

Get a life. They have them on sale at Wall-Mart this week. 1/2 off.
(should fit you)

Unsure, I don`t know about the hand-held pro 26, but the pro 2004 is a
GREAT scanner. I wouldn`t sale either of mine. Good luck.

Message-id: <6fpu2r$p4o$1@newsd-134.iap.bryant.webtv.net>

Apparently "NOT" I decided to check this NG out in Dec 97 because I own
a scanner. I couldn't believe all the flaming going on in this group. I
decided to save this NG in my folders and come back at another time
hoping all the little kiddy fights were over. Well it is now almost
April and all the losers (you know who you are) are still playing ego
trips & you don't know-he don't know crap. Well i'll be deleting this NG
from my folders and try to find one that is willing to help scanner
owners out without filling 700 posts with cry baby garbage. It's too bad
because there seemed to be "some" very knowledgable scanner owners in
this group willing to help out people. All i'll leave with is-Try
growing up aliitle and run a newsgroup that will help people out.
Good Luck-Dennis
Max Innis

Hello,

I am very new to the world of scanning, but I would very much like to get into it. I have found two scanners for sale, they are:

Realistic Pro 26
Realistic Pro 2004

What's the difference(s)? Which should I go for? The 2004 is somewhat cheaper, but I want a fairly good one, and can't afford to waste my money.

Any help would be greatly appreciated.

Regards,
eclaca@leeds.ac.uk

The PRO-2004 is about 8-10 years old. There are some parts available, but the electroluminescent display is sold out. However, you can still use the scanner. I have a PRO-2004 and two PRO-2006's. I like the metal case on the 2004, and it seems a bit more sensitive on some signals. It can also be changed from 300 to 400 channels, controlled via computer, given an S-meter, changed to 65,000 channels and many other neat things.

Or, if you want to listen to 5 channels of your local police, go for the PRO-26.

How about just getting a long whip antenna? You can go to a local Ham Store and ask for a "Hot Rod" antenna. They improve reception a lot. I think R/S also has a model that is simlar.

Are you a "hands-on" kinda guy? You like
soldering irons, resistors, capacitors, and
stuff like that? If so, the PRO-2004 is a
cool scanner that has the capability to be
made even lots better with some hands-on.

The PRO-26 is pretty much hands-off, but
otherwise, a very good scanner, too.

I like the low band Antenna Specialists too. You see them mounted on all the state and local police cruisers on the trunk here in Mass.they have both mag and perm mount available, costing about 40.00.I use the MONR33 with a visegrip mount on my tractor trailer mirror and transfer it to the mirror on my pickup when home.It is tunable for low vhf and comes with excellent instructions to do so.They alos have one with a choke for 800mhz I may try sometime soon. I mail ordered mine from Scanner World I think.

How secure are the V-Tech digital phones against eavesdropping? I bought one a few weeks ago, and today I heard someone on my line tell me to "get off the phone big mouth."

Is it possible someone has a similar digital phone, and is able to talk on my line?

I also tried one of the new DSS phones, but I thought the sound quality on this regular digital one was actually better, so I bought this one. My old phone which I replaced was an AT&T low band (46/49 mhz) 10 channel model, which I discovered after reading this newsgroup, was like using a small radio station to broadcast my phone calls all over the neighborhood.

320. FS: RARE Hard to find 14 volt Grain of Wheat Bulbs

Lot of 10 NEW 14 volt grain of wheat light bulbs. Most rigs use 12
volters. These are 14 volters and put out just about the same amount
of light on 12 volts as the 12 volters do. They should last virtually
forever once replaced in your rig. This voltage is quite hard to find.
Mostly one ends up using 12 volters only to have to replace them again
in a short time. These bulbs draw apprx. 60ma. at 12 volts. I found
these at Dayton one year and bought up all the guy had. Lot of 10
grain of wheat bulbs $15 postage paid to you.
Email me if interested. Also have some of these up on eBay if you want
to play the auction bidding game.

> LEGALLY QUALIFIED? What in the hell are you blabbering about?

Blake, if you wanted to go thru the licensing proces with someone & sign their FCC form 610 for that person to become an amateur, you couildn't. The reason for this is because in order to be an ACCREDITATED VE & do the types of things you have been discussing you are REQUIRED BY THE FCC to have AT MINIMUM a GENERAL CLASS (amateur radio) license!! You do NOT have the license to qualify (legally) to do this according to the database.

I have been an Accreditated VE thru the ARRL for 8 years, and am one of the most active VE's in the United States.

I have a Midland 70-254B commercial handheld transceiver, 5 watts,
covers 440 to 470 mhz, 16 channels, PL encode/decode, keyboard
programmable, has jacks for external speaker mike, battery 13.2v,
1000mah, and manual. The radio and battery are "as-new" condition.
I do not have the Midland charger.

Looking for $300 or trade to BC3000, ar8000, pro26 or 64, trunk tracker.
Sony 2010, Sangean 909, Grundig Sat700, Yaesu 9600, Lowe HF 150/225.

I also have an Icom Super BP8 battery and charger that fits the Midland
I can include with the right trade. Icom made this radio for Midland and
is identical to the U-16.

RadioShack will have a new TrunkTracker radio on the market soon. The Pro-91 is a cheaper scanner than the Pro-90. It has only 100 channels compared to the Pro-90 which has 300 channels. This might be a good scanner to have if you already have a scanner that you like, but need another one to dedicate to trunking service.

Obviously you have no privacy with your new phone. However it's unlikely
that another V-tech would be able to steal your dial-tone as the phones
and their base units handshake when the phone is lifted from the base.

You're such a hypocrite Toilet Boy. Whatever turmoil Macaroon
may have caused is nothing compared to the quantity or flavor
of trouble you've caused in the scanner groups over the last
two years.

> He has been asked for his REAL IDENTITY numerous times
> but refuses to give it, showing himself to be a coward!

You've been asked for the information about your supposed
degrees for two years now. Based on your statement above,
your refusal to divulge that information about yourself
also makes you a coward. I'm sure no one is surprised by
that revelation.

Wrong, you lie again Toilet Boy! Cheek *did* give details of
his credentials to me. I asked him directly for the information,
and he readily provided the data. You're just peeved because
he didn't give them to you.

> So what is good enough for Bill is good enough for ME. If
> Bill gives his (& they are verified as authentic)

Cheek has provided the information and it has been proven
correct. You're running out of excuses to delay providing
the data about your alleged degrees. You'll try any excuse
to avoid it becoming known you lied about your degrees.

> I will give MINE IMMEDIATELY!

You've said that before when you promised to provide the
data about you in December 1997. Remember that pesky little
challenge I gave you? No, you remember? It was the one you
FAILED miserably. No surprise there.

> Obviously, you have NO idea what you are talking about!

Ah, yes a favorite Toilet Boy tactic. When caught in a lie,
you accuse someone of having no understanding of the situation
at hand. It is *you*, Toilet Boy who is clue less here. Your
veil of innocence is illusory, people see right through your
lies and deceit. Your constant denials and attempts to deflect
scrutiny of your lies only reinforce the weakness and feeble
nature of your defense.

Chuckster wrote:

obfd@aol.com (OBFD) drooled all over himself while attempting
a coherent thought:

> AND this guy calls him "toilet boy", accusing him of "lying"
> like a broken record... (for lack of anything of SUBSTANCE)

OK Opie, here's a little "substance" for you to examine. It's
been proven that Toilet Boy has lied about the following points:

1. He claims that he has written several articles for the ARRL
and other technical journals.

I proved he lied here. Check DejaNews and you'll see the evidence.

2. He claims that he did not forge cancel over a hundred posts
in the scanner newsgroups.

Two individuals from the Erols system posted the proof that
Mackey's denials of responsibility were lies.

3. He claims that he has a Masters degree.

In the absence of proof, he lied.

4. During May and June 1996 he claimed he had children and was
half Indian.

During the same time period, he also claimed he had no children,
and that he was full blooded caucasian. One of the two statements
has to be a lie. Either way, he lied. The evidence resides on
DejaNews. Look it up.

That's enough to make my point.

> AND Mackey is an Extra Class Ham, which is prob more than the
> guy obsessed w/ toilets will ever amount to...

I have an Extra Class License. I, like Toilet boy, also have a
General Radiotelephone Operator License. However, I have the
Radar Endorsement, Mackey doesn't.

I also have Journeyman Rating ISCET Certified Electronic
Technician, a PCIA Certified Mobile Communications Technician
(formerly NABER Certified Two-Way Radio Technician), and an
A+ Certified Service Technician endorsed for DOS/Windows.
Your beloved Toilet Boy has none of these.

stutter so horrendously.

> you're following the advice of the ONLY person offering
> opposition to what I have said. That is Blake Bowers, who
> was NOT even a licensed amateur radio operator at the time
> in question.

Just because Blake was not licensed during the time in question
does not mean he was unaware of what was going on in the
amateur radio community at the time. Many people become
intimately aware of the activities well before the obtain their
radio license. I'm quite sure that in 1983 when you got your
first license, you didn't decide to get the license on one day
and take the test that very same day. I'll bet you spent a fair
amount of time getting acquainted with a few hams in your area
while studying for your first examination. Many people have
gone quite a few years between the time they first learned of
amateur radio and actually earned their first ticket.

Therefore, saying Bowers was ignorant of the events during the
Bash years is a clear demonstration of *your* ignorance.

> (Blake's callsign of KD4RME was issued in 1996, over 10
> years AFTER the time in question according to the database.
> Also he has NO previous callsigns according to the database

It is irrelevant *when* he was licensed because you cannot
establish when he first became aware of amateur radio. Since
you have no way of knowing precisely when he first got
interested in amateur radio, your position is unfounded and
full of holes.

> Blake's license (codeless Technician, the most basic of all
> ham licenses) does not require ANY knowledge of VE or licensing
> issues and those licensees are NOT qualified to conduct
> licensing testing.

> Obviously, Blake is not even legally qualified to have any
> credibility on this topic.

Just because Blake's No-Code Technician license does not legally *allow* him to conduct exams, it also does not *prevent* him from reading the same material you studied to get certified as a VE. The information is freely available to any interested parties. For instance, I have the ARRL VE Book and often loan it out to other hams (who do not have an Advanced or Extra Class) so they can learn more about the examination process. You're not qualified to render an opinion on what information Blake is or is not knowledgeable on. Only he is.

Now it is you who is showing your ignorance again, Toilet Boy.

That's because Toilet Boy is a moron with zero credibility who attempts to *think* he is credible.

KA0SSF--John <jmackey@usa.net> tried to strain his tiny mind in a feeble attempt to display command of the English language:

> Those are a nice scanner!

My, my, my, Toilet Boy, for someone who claims to have a Master's Degree, you have truly horrible grammar. You know, Toilet Boy, flaunting such poor grammar is the hallmark of someone of limited intelligence and even more limited education. When you show us these illuminating insights into your puny intellect, how do you expect anyone with even a modicum of reason to believe your claims of advanced degrees? Oh yes, how could I have forgotten, you don't actually have a real Master's or even a Bachelor's degree, now do you, Toilet Boy? Hmmmm?

Since you need a refresher course in grammar, let us examine your statement. Is the sentence about a single scanner or multiple scanners? If it is a single scanner, the sentence should read 'That is a nice scanner.' But, if it is about multiple scanners, then it should have read 'Those are nice scanners.' You should have gone to class that day instead of dropping your drawers for stray men in the bathroom.

Call me silly, but I've looked and looked at the program, and I think
it's just an improved version of edacs.exe, displaying the info
broadcast on the control channel. It doesn't seem to be able to control
a scanner at all, from what I can see.... or am I doing something
innanely stupid here?
The next version, so the trunker team reports will have these features.
And oh boy! am I looking forward to that! Be nice if they could get it
to work with a few more scanners and maybe use just the one scanner for
the job (looking for the 10101010... sequence to end the voice channel
and return to the control channel to continue decoding...)
Anyone got a reply to this? Particularly looking to control AOR5000....

Thanks - Jason

What can I say! I've had an AR5000 (not the +3) for 8 months and I love it. It is by and far the best base scanner I have ever used. It also ranks with some professional radio-monitor gear I have used (IFR, Anritsu etc) Features, features, and more features. And flexibility in everything it does. The only things I don't like about it are the relay that clicks every time it changes frequencies at 40 & 400 MHz boundaries and the inability to appoint parameters such as delay and resume time etc on a per channel or per bank basis - these are configurable, but act globally on the whole lot.
But Oh Boy! the quality of the RF and audio and features sure makes it one heck of a radio....

Hi Frank (and others)
I personally like the Yupi - it has a great sound quality, and the RF quality is pretty good, too. It may not be quite as good as some out there (ie AR8000 and base version scanners) but it definitely ranks in the top range.
Sensitivity is wonderful, selectivity is pretty good (for a scanner) and dynamic range is OK. For shortwave/HF, it's not too bad so far as a scanner is concerned, bearing in mind a real HF receiver will always beat it.
Things I don't like: can't select no delay is the main problem, a bit heavy on battery life, too. And I'd like computer control (but then I should have bought a AR8000) and I'm still trying to find the discriminator tap point!!!

To sum up, I'm quite besotted with it.

I have duel Firestick antenas (2' in length) mounted 100
inches apart and in need of a duel coax harness to connect to a
standard CB radio. The people at Firestick told me that each length of
coax needs to be 18' feet in length, but did not say what coax would
be best (Rg 59 or 58), any sugestions? Any help would be appreciated.

Rumor has it PARG has provided more VE test sessions in the Portland Metro than ANY other ham group.

One fellow I ran into (NON parg affiliated) at Seaside said PARG provided almost as many test sessions as ALL ham clubs in Portland Metro.

I don't know, I'm NOT in PDX, but the source was good. I'll try to find him and have him post here.

Sounds like you have an ax to grind. Not an impartial source of info.

Wrong! It's still quite easy to import scanners. I asked one overseas
company (well known in this ng) what were the odds of customs snagging
one. The reply was virtually nil. I do agree with someone who posted
here that that will change when they figure it out. So, if you're
going to, now's the time because soon you won't be able to.

Oh, maybe you think I'm a rectal ventriloquist or something. That's
pretty funny, Mackey. You're a real funny guy. Maybe I could look
you up at one of these Ham Fest things you're always talking about
and we could have some laughs. Do they ever have them in B.C.?

There you go. It was not too tough for you to admit you were
mistaken. I of course, did have to spell it out for you, and leave
you no room to move except to finally admit it, but heck, did it
hurt you to admit it?

>I imagine you have a couple Bash books laying around from your
>early days. I'll see if I can find any old Bash books from others.
>
No Bash Books. I don't collect those. I do have some very
interesting catalogues from Motorola from back in the 40's and
50's though. Part of my antique Motorola collection. I don't
really collect much other stuff though. Just picked up a Motorola
dealers warranty service manual for some of the original Motorola
car radios. Mint condition!

>Would you like me to send you a copy of one of the manuals

Nah, again, I don't collect those things. However, I do collect
antique Motorola literature, collectables, etc if you come across
that kind of stuff.

Actually, the kid lived in Vermont! and I havn't been "ripped off" ...yet!
Things "seem" to be rolling along again, time will tell, I'll keep y'all
posted.

At A-N-Y rate...there isn't a piece of radio ANYWHERE that I'd kill a fly
over.....ok, maybe a fly, you get my drift. The point is we all want to swap
and sell radio/scanner/hobby equipment over the Internet freely and to

some extent "worry free". This obviously requires a degree of risk, in the end the risk is for the most part worth it. If not, you learn a lesson. What you do from there depends on what you learn. Over the years I've learned that it's best to establish some kind of relationship either in person or over the phone, for some reason this personal connection makes a difference in the commitment to finish the deal. Secondly, those who tend to offer a means of communication volunteerly, either a home or office phone number often times both, tend to be genuine. Sometimes a price may tempt you to "lower your guard" and want to be "the first to respond" because the price is such a "bargain" ......there's where a flag should go up. And so on from there on, lack of comminication either by e-mail, voice, or in person.

To me, half the fun of the deal is meeting the person, sharing all the stories about all the stuff you have or had, how much your wife, girl-friend, etc., bugs you about your "geeky" hobby and the "Forbidden Room" in your house or apartment.

The LAST thing I wanna hear is "SEE! I told you so, you got ripped off!"

-Tom

The ACLU is the originator of the ECPA (Electronic Criminal Protection Act). They started the ball rolling and the cellular industry picked it up to ban cellular monitoring. The ACLU were afraid that cops would hear pimps, dope dealers, muders etc. plotting, confessing on their cell phone and their friends would actually go to jail. They don't care one bit about the law abiding scanner monitor.

I am new to scanning. I recently received a new Radio Shack Pro-2045 base scanner as a gift. I was able to get it working to listen to a few local police frequencies and am just starting to get into this hobby.

I have been reading this news group for a few weeks now, and have not seen any information on this particular scanner. Does anyone have any comments or information (good or bad), tips etc. on this model scanner.

I was always told co-phase antenna harnesses are critica in length. I seem to remember that's why rg-59 (75 ohm) cable is used - the 59, at a critical fraction of a wavelength acts as an impedance transformer (or phase inverter. It's been a while-). Check your SWR after lengthening anything is a co-phase setup, if you can't find a solid refernece in a book or somebody who has done this lately.

I would like to hear from those of you who own a RS PRO-2042.

I just purchased mine yesterday but the sensitivity on it doesn't compare to either my PRO-2006, PRO-2005, or BC9000XLT.

I normally prefer RS scanners but for the money this one has been a big disappointment.

Does anybody else have the same problem or did I get a faulty unit?

E-mail me at kelley@ix.netcom.com

Thanks

Yea, lets do that Blake!

> John Mackey has finally admitted that he is wrong,

Perhaps you should read my message again. I state that "you may be right" & that I did not have the necessary info to prove anything else.

Lets also reflect on the fact that this was an issue that started on ONE newsgroup, & now YOU have expanded it to FOUR newsgroups in an obvious attempt to cause trouble. Blake, you had been doing pretty good for a year or so, why are you wanting to cause trouble NOW?

My suggestion to everyone, is to support Blake in being a positive force in each and every thread where he is having his normal problems. Please, take a breath, and post a message to him congratulating him on finally having the inner strength, to to become a positive force on these newsgroups once again.

Further, counsel Blake to finally admit that he is wrong in other threads, and to listen to that inner voice, and admit the other wrongs that he has within him.

If we all work at this, we CAN make a difference!

Hello everyone...

1) Is it possible to modify the US version of Winradio to receive cellular frequencies? I know that earlier scanners were easy to modify, but I haven't been able to find any information on whether it is even theoretically possible.

2) Has anyone connected their Winradio to a "data-slicer" interface to receive POCSAG and MDT info?

3) Is there a manufacturer of premade "data-slicer" interfaces (i.e. the serial to discriminator output)?

Jeff

I just purchased a Radio Shack PRO-90 trunktracker yesterday...they went on special. Had to purchase the demo unit because everyone else in this town had the same idea, only they were quicker. The demo did not even have a fingerprint on it. No further reduction in price though...only a better warranty. :<

I had listened to the 16 trunk channels in my area on a standard scanner before...it was a mishmash of confusing stuff with some interesting things here and there, but you cannot follow a conversation at all.

I also thought that the only thing of value on the trunked system would be a local fire department.

Boy was I wrong. There are all kinds of things on this trunked service...about one hundred different IDs...some of them were stakeouts! Cool! Local parks...juvy hall...medical...it'll take a while to figure it all out.

It's amazing to me just how much stuff can be crammed into 16 frequencies.

Now my question is...if Caltrans has an 8 frequency trunked system with only 6 IDs in use...why the heck are they using a trunked system? Perhaps a good motorola salesman sold 'em a "bill of goods"?

From everything i've heard, it's _not_ worth the price of admission. A friend of mine, he's a tech in a computer store, bought one and said that interference from the computer is so bad and selectivity so bad that the whole thing is in a drawer now. He got one of the Icom units and is *very* happy with it. bud

Why pay some shop $20 to $40 to re-program your phone, when you can do
it
yourself? Now you can order complete programming instructions for virtually
any phone on the market. Simply print this form, fill it out completely, and
mail
it with $5.00 (US check or money order) to the address below. Oders
paying
by money order will be shipped within 48 hours of receipt (if paying
by check,
please allow time for check to clear).

Name:

_____
Address:

_____
City, State, Zip:

_____
E-mail address:

_____

Phone manufacturer:

_____
Phone model number:

_____
(usually located on back of phone
under battery-
if unsure, note all numbers that you think may
be
correct, we'll figure it out for you.)

Mail to: Programming Instructions

2316 Pine Drive
Ferndale, Wa 98248

If we cannot locate programming
instructions for your phone, we will notify
you via e-mail, and return your
check or money order to you promptly.

Roumor has it if you download the Aussie software from the home BBS, it doesn't know what country it is in!
Seeing the ad for thr WinRadio (R) Digital Suite(TM) leads me to believe there is built in data slicing or it's equivalent through the ISA bus. $99 worth of a software add-on from the manufacturer enables Satellite Weather FAx, HF fax, Packet, ACARS, DTMF, CTCSS and other4 functions.
My question with it always was, how is it going to work with my motyley assortment of parts that have probably never been assembled together in a PC in my exact configuration before. It's hard enough getting video, audio and and a modem to live with today's high performance motherboards & PCI disk controllers. I know my (skywalker HOT-569) motherboard doesn't like "Plug & pray" ISA sound cards. Seems like something that would work with FCC approved, UL listed gear, but with the "fleamarket flyers" a lot of us cobble together?

If you are feeding a co-phased antenna, you may be destroying its performance by adding (or deleting) coax to the pre-existing length. Usually with cophased antennas the coax is part of the matching between them.

As for splicing, I tend to use BNC connectors and a BNC barrel for that purpose. This type minimizes impedence bumps.

You can get the 30 channel version (the BC60XLT-1) at the Wal-Mart internet online store as a "closeout" for only $57. Been there, done that (last week).

Remove the radio from the case, and look for a trim pot inside on the outer edge. This is the squelch. Adjust this up or down to your preference. Remember that as the battery weakens, the squelch will open, so adjust it slightly high.

> repeater)

It's CLEMARS - A simplex statewide mutual aid channel. All law
agencies are supposed to have at least some capability on this
channel.

> 154.9350 - I've never heard anything on this channel
> 154.9050 - most common

Extenders are easily identifiable by their "chop-chop-chop" sound
(the carrier drops out to check to see if there is another
extender nearby).

> However, this is ONLY for the CHP, not local police (no such thing is in use in
> So. Cal. for local police - that I know of).

> basically, you have all the info, but sorry to tell you that it really doesn't
> work anymore (at least in So. Cal.).

Same here in Nor Cal (Bay Area).

To make things worse, because of the varied terrain around here,
the extender may be just around the corner, or 10 miles away on a
mountain, and they will both sound the same.

It's not "guarantee" that a cruiser is around.

Hi All,

CC: abuse@sprintnet.net, wa7twi@primenet.com

looks like someone from SprintNet has issued another Rogue
Cancel in the rec.radio.scanner News groups again!!! All
indications seem to imply that the guility party is located
in the Mountain Time Zone (GMT -7,00), however, at the time
I came across this cancel it was actually 18:34 EDT (which
makes it 15:34 PDT). This person did a pretty nice job of
trying to cover his tracks, but not good enough. This person
is also using Netscape Gold version 3.01 under Windows 3.1.
This seems to indicated that our Friend in Beaverton, OR has
been playing games again and decided to Cancel a post from
Richard Kendricks!

The Cancelled article can be viewed at the following URL in Deja News:

http://x4.dejanews.com/getdoc.xp?AN=340995093&CONTEXT=891816930.528941534&hitnum=3&AH=1

I just realized that the GMT -7.00 is probably showing up
because of the Time Changed that occured last night. The
person that issued this cancel is most likely located in
the PDT Time zone (same as Beaverton, OR)

Nope, John. I offer no more facts than I already had. No
need to. You admitted you were grossly in error, and we
see no reason to continue.

And again, John, we are all proud of you for admitting wrong.

I own a RS RRO-2042, and have not much bad to say about it aside from these two things, and these aren't all that bad:

1. 1000 channels in 10 banks is difficult to manage. 50 banks of 20 would have been better.
2. The tuning know should have a detent so it can be tuned faster.

...aside from this, this is the best scanner I've owned.

obfd@aol.com (OBFD) drooled all over himself while attempting
a coherent thought:

> AND this guy calls him "toilet boy", accusing him of "lying"
> like a broken record... (for lack of anything of SUBSTANCE)

OK Opie, here's a little "substance" for you to examine. It's
been proven that Toilet Boy has lied about the following points:

1. He claims that he has written several articles for the ARRL
and other technical journals.

I proved he lied here. Check DejaNews and you'll see the evidence.

2. He claims that he did not forge cancel over a hundred posts
in the scanner newsgroups.

Two individuals from the Erols system posted the proof that
Mackey's denials of responsibility were lies.

3. He claims that he has a Masters degree.

In the absence of proof, he lied.

4. During May and June 1996 he claimed he had children and was
half Indian.

During the same time period, he also claimed he had no children,
and that he was full blooded caucasian. One of the two statements
has to be a lie. Either way, he lied. The evidence resides on
DejaNews. Look it up.

That's enough to make my point.

> AND Mackey is an Extra Class Ham, which is prob more than the
> guy obsessed w/ toilets will ever amount to...

I have an Extra Class License. I, like Toilet boy, also have a
General Radiotelephone Operator License. However, I have the
Radar Endorsement, Mackey doesn't.

I also have Journeyman Rating ISCET Certified Electronic
Technician, a PCIA Certified Mobile Communications Technician
(formerly NABER Certified Two-Way Radio Technician), and an
A+ Certified Service Technician endorsed for DOS/Windows.
Your beloved Toilet Boy has none of these.

John I have been watching your postings since last year, and you made several postings that if Bill Cheek would stop his postings about you , you would go back on topic and behave.

Bill has stopped and yet you are still attacking him personally, now you are saying there is a warrant out for him, where is your proof of this ?

If you had any you would have posted it on here , so now you have added another lie on top of the others.

You need to show your proof or just go away and stop causing problems on the newsgroups, enough is enough it is time to prove what you say is true.

Source record: 164623

In attempts to connect my pro-66 scanner to my computer to
decode MDTs and POCSAG and others, I opened my little hand held and
looked arround for a bit and found silkscreed on to the board a little
"TP DISCRI." with a little arrow ponting to a lone solder spot... i
visualy traced this pont through a few micro risistors or caps. i
couldn't tell they could have even been diodes there the little surface
mount numbers... any way they led back to a pin wich mached a similar
labled chip from Bill Cheek's wonderful list... the lable of the chip
and the
one in the list is off by like one or 2 letters at the end of the ID
number... the just of this letter is.
Is this "TP DISCRI." a good place to tap for the + part of my
Discriminator tap and also what should I use for my ground in the tap??

Please And Thank You (PATY) Matt.

Source record: 164627

Hey John,
Wait just a minute ! I was here when this all started. I have read Cheeks credentials online & off. I verified them to my satisfaction. After doing research on Bill, I now know more about him then I know about my uncles. I know the names of his parents, kids & pets, where & when he was born, the names of the schools he went to & the ones he TAUGHT at, his war record, past work with law enforcement, satellite & space engineering...ect...ect... It`s all public record. Have someone look it up for you.

And now John, It`s YOUR turn.

You are no more than a little wart on the ass of a man like Cheek! Your verbal abuse of people shows your limited dealing with people & life as a whole. You are a sore loser that`s not man enough to admit when he`s wrong. A child.
You are the son of a very sad man, John Mackey Sr. The thought of you having his name & turning out like you did broke his heart. With his life savings in hand, he tried to send you to school & give you a respectfull life. To belong. Help mankind.
And what did you give him in return? Yes, a very sad man indeed. I hope God had mercy on him, for you sure didn`t!
Not willing to admit that your father was a good man & well respected by all, you knew that he had to kill you while you were still a pup, and you moved several times during your life. Your Beaverton, OR. address was a last ditch effort to avoid your father before his death, knowing that if he found you, he would have to make*The Final Cut*.
Your failed marriage thankfully did not produce any offspring. (We all know why...he he he)
You did however, see the need for a higher education and were * self taught * in your ideas of buisness management...cheating, lying & word manipulation.
You lied your self into a janitors job working late-nights. Your training on the day-shift brought you close to a man named Bill, a gay man also stuck in a dead-end job. Among *other things*, (sick)
he showed you how to find gay porn on his computer, then to a gay ng. You paid close attention to how he accessed the net, not missing a stroke.
Then after 6 months of mop training, poof, of to night-shift you went.
Not having anyone around & you feeling horny, you started stealing access to get to the gay ng`s. One night a couple of years ago, (after inhaling concentrated vapors of WINDEX ) you couldn`t find the gay ng & stumbled into THIS ng by mistake.
Still high on the fumes, you read a response from Bill Cheek, a smart man indeed. Almost father-like. Your thoughts turn to your gay friend, Bill on the day-shift, and you start to sob as he has not been to *visit* you since

your transfer to nights.
You turn angry & bitter. You now HATE smart, father-like straight men.
You lash out at anyone with an IQ over 70. And if his name is BILL, you
hunt them down to the ends of cyber-space.

That is how you ended up here. Since you wouldn`t show your credentials,
I posted them for you. (pretty sad, ain`t it?)
Cheek DID show his, but you didn`t want to look. Now I don`t expect you
you believe me, as I`m not dumb OR gay, so why don`t you look them up
yourself ?

John, get a life. They have them on sale at WAL-MART this week, 1/2 off. (
should fit you)

Poof, back into the background I go. Flame away, have fun. (I won`t see
your post anymore)

I just realized that the GMT -7.00 is probably showing up
because of the Time Changed that occured last night. The
person that issued this cancel is most likely located in
the PDT Time zone (same as Beaverton, OR)

No kidding John. When did I state that I did? You stated that I did
not have a legal qualification to know the rules, and what had
evolved. Never has there been any question of whether or
not I have ever given a HAM exam, the only thing that
has been debated is your ignorance of the rules, and what caused
them to evolve.

Now John, we ALL are quite proud of you finally finding the inner
strength to admit that you are wrong. Don't screw that up now.

Chuckle. I understand John. I can see where it is tough for
you to admit that you were wrong. Once again, we are ALL
proud of you finally finding that inner strength, and finally
admitting it.

Did you use professional counseling, or just finally realized
how much better it would be?

476. John Mackey admits wrongdoing!

Folks, lets take a step back from the flames, and reflect.

John Mackey has finally admitted that he is wrong, and we need to be supportive of that fact.

Each and every one of you all know, that it had to be a tremendous effort on Johns part to finally admit, that after years of the crap that has been going on, to finally admit that, yes, he was wrong.

I am not sure what finally caused the admission, he was caught in a situation where it had been obvious for a number of posts that he was wrong, but as normal, he continued to dig himself deeper. Out of the blue, came the admission.

My suggestion to everyone, is to support John in this. In each and every thread where he is having his normal problems, please, take a breath, and post a message to him congratulating him on finally having the inner strength, to finally admit that he is wrong.

Further, counsel him to finally admit that he is wrong in other threads, and to listen to that inner voice, and admit the other wrongs that he has within him.

If we all work at this, we CAN make a difference!

Maybe we can get him to finally admit that he just screwed up, when he destroyed the famous repeater systems. That would be a cleansing action for him, to allow him to start fresh!

>I say you lied. You had no valid internet address because you stole

We all know how John is, but, amazingly, he admitted that he
was wrong in another thread! Maybe, if we all are very supportive,
we can help John through admitting more problems he has, such
as this thread!

Encourage him to come clean! It will help him tremendously!

Tell him that you are proud of him!

How can I add several feet of RG 59 coax to an existing piece
(presently no connectors on either end) with the least loss in gain?
Is there a certain (splicing) connector that is best? I cannot run all
new cable due its' permanent mounting, but must add a few feet to each
side of a co-phased 2' Firestick CB antenna set up. Any help woudl be
appreciated.

Most radios. e.g. Yaesu FT 212,2400,2500 etc.,etc. use a 10 volt bulb which Yaesu wants to sell you for lots of bucks and then it blows out again just like you surmised. I replaced these with Radio Shack 12 volt bulbs at 2 for $1.79 and haven't had to re replace any yet. Yaesu and maybe others run these off of a 8 or 10 volt regulator and not directly off of the 12 volts that the radio runs on.
At any rate, whats so rare about a 14 volt grain of wheater? American Science and Surplus has them for 4 for $2.00 or 50 cents apiece. The $1.50 each price you are quoting sounds like a rip off.

Do you really believe that customs at the US/Canada border will actually take the time to check such a minor thing as the receive capabilities of your scanner? Personnally, I don't. Sooooo, unless you plan to tell them as you are rolling across the border "Hey that guy up there is on his cell phone discussing..... I just heard it on my scanner" you should not have a major problem. Be aware however that some cities on the border have "No scanners in the car laws". Example Detroit WILL seize ANY scanner found in the passenger area of a motor vehicle.

John

Source record: 164676

Can I increase the quality of reception of my RS PRO-90 by replacing the standard antenna that comes with the unit with another/better one? I live downtown in a city, so I know I have a lot of interference. I listen primarily on the 855-869 Mhz range, but would also like to get 39-46 Mhz, which I basically don't get now. I listen in my car and several rooms in my house, so I think I am limited to a portable solution. I heard the Watson 889 did very well across the board, and especially in these ranges. Any suggestions?

Thanks.

>band. Checking the bands shown on the back of this used portable
>scanner, it breaks the 800MHZ band into several gaps ranging from
>806 to 899 and to 960MHZ.

Good choice. The Pro-37 was a pretty good scanner in it's time, and while
lacking some of the newer features, still fits the bill quite nicely.

>Will the "modification" allow me to get ALL of the 800MHZ or simply
>the cell freq's that were "outlawed" ca 1993 (to enhance the value
>of cell phone stock --which it did)? This Pro-37 looks to be vintage
>about 1992. Or, does the Mofification FAQ instead restore later
>model Pro-37's to get the same 800MHZ freq bands that my (earlier
>and older) Pro-37 already gets now?

The stock Pro-37 will get 806-960 less cellular (as indicated by that lable).
The "modifaction" actually more of a "restoration" will unblock the blocked
bands, giving complete access to the range from 806-960. As far as I know,
there were no significant design changes during the Pro-37's production run;
my 11A1 Pro-37 gets the same frequencies as a last year one.

>Also, when the local police changed their freq's a couple years
>back, did many of them land in the 800MHZ bands --and for which
>the "modification" could be useful?

The police should not be in the cellular ranges; they are reserved for the
cellular companies.

>Another question. If this Pro-37 was originally sold say 1991 by
>Radio Shack, what was the eventual best successor (best portable
>scanner) that RS sold --and which got the completest bands? My
>guess is that, now, ALL scanners are not as good as ones that are
>8 years old because Fed laws are outlawing scanning of certain
>frequencies? Thanks!

Well, this question really depends on your wanting to (illegally AFAIK)
receive cellular communications. If you aren't interested in that at all,
then some of the newer ones are head and shoulders above the older ones,
having more channels, computer interface ability, better reception, and trunk
following. It really depends on what you want out of a scanner. I recently
purchased a Pro-37 to replace the one I sold a bit ago mainly out of
sentimental value (it was my first scanner). It was received unmodified, and
will probably stay that way unless I decide to add more channels or something

else. If it weren't for the sentimental value, I'd probably have gotten a newer handheld (maybe a trunktracker :)).

Anyhoo, I hope this helps. If you'd like to see a great page that has reviews of many scanners, check out:

Some rubber duckies apparently are better than others.
But there has not been any research that I know of
to substantiate these claims. One thing is for sure,
though......that all rubber-duckie-like antennas are
not very good on an absolute scale.

You have only to connect a base-type antenna for even
a few seconds to compare the difference. It probably
isn't worth the time and money to hunt down a "better"
portable antenna....basically another rubber duckie.

> I live downtown in a city, so I know I have a lot of interference. I

Well, Radio Shack has an interesting portable antenna
worth a look. It's their #20-006 that might be a lot
better for when you're not trucking around.

You might also be able to contrive something with their
#20-161 with an adapter or two.

Their magnet mount whip antenna perched atop your
refrigerator (#20-012) would certainly beat the rubber
duckie antennas. It would also work great in your
car when you're on the road.

I am very supportive, Blake. In fact, I have thought
for a long time now that he needed a real good cleansing.
Confession is so good for the soul that I am surprised
he hadn't discovered it for himself until now.

Although, I must admit that he did post another
confession recently....something admitting to his
choice of lifestyles and coming out of the closet.
I didn't pay it too much mind because it wasn't
related to radio. But the confession you wrung from
him is certainly a step in the right direction.

Between the two recent confessions, perhaps the
lad has begun the long road to recovery. Yes, I am
very supportive. Nice job, Blake.

Are you taking up a collection to assist him and
his poor family in any manner?

Bill

I forget the URL (it's on some unrelated site or net) but Stark Electronics has
Winegard, Channel Master & maybe one or two more.
The RAdio Shack ground plane (the big one @ $34.95? now)
is the best Omni I've had up in the air and the best of any sort outside of the
OLD Grove SCanner beam. Trouble is it is fragile in high ice or wind areas,
breaks off right above the bracket, especially if your support pole is limber.
Why adapt RG-58 to anything? RG-6 is lower loss and fits 50% of the
scanner antennas sold with a standard F connector. It fits a Pl-259 connector
with the proper sleeve, or just use an "F" to pl-259 adapter.
To use a TV antenna you mount it vertical instead of horizontal. Turn the
thing 90 degrees & drill new holes for the "U" bolts. WARNING: (nobody ever
mentions this) the wind load is higher this way, especially if ice collects.
Use HEAVY pipe& a sturdy mount. Also, the insulators are stressed for
horizontal, not vertical. Use a SMALL antenna & don't expect it to last long.
"Swept wing" (angled log periodic) designs like Radio Shack Tv antennas are
lousy physically anyway and come apart right away when mounted vertically.
You'll need to rotate it, or point it in the serious direction of interest. The
pickup off the back & sides is worse than a simple scanner antenna. Remember
too that a 6 foot long TV antenna only gives 0-4Db of gain on low band & VHF

and maybe 5db on UHF. Not a lot, because they are so broadbanded.
Personally I'd get a long UHF TV yagi (which is pretty small and light & easier to change to vertical & have it stay up a year or two) on a rotor for exotic UHF & 800 hunting & get a good omni scanner antenna for everything else. Get a switch & pick what you need as you go .
Using one TV antenna for both is not an option (oh it might work a bit, but not worthwhile on one or the other): The loss when polarized wrong is about 10 db, and the biggest Tv antenna only has 6 to 8 db gain on low band, 10 or 11 on UHF. So its probably worse than you internal whip.
I learned the above over many years of picking up shedding elements after every wind storm. Go sturdy & go small. The last 5 feet above the rotor isn't worth it in the long run & tighten the bolts until you are SURE they will break, then go 1/4 turn past.

Actually, your John Mackey here was making an attempt to
differentiate for the benefit of a net-kook here in North Carolina
that he and I are two individual people (an unfounded assumption
that's actually happened in the past). Frankly, I've explained this
once here already, so I'll forego the involved explanation <G>. It's
readily apparent that "the scanners" John Mackey is not well revered
in this USENET circle; something I'm not qualified for or interested
in deciphering. However, since I personally have an equally
conspicuous presence in MY CORNER of the Internet-- though, at the
other end of the spectrum, I wholeheartedly feel I'm typically very
well received, a reputation which is the side effect of having simply
been painstakingly thorough and not unnecessarily judgmental for the
better part of the last several years-- I'd very much like not to have
all that unjustly tainted... of course, every now and then, a bad
apple comes marching down the pike into once of MY circles, and the
ensuing "battle" (which frankly, I've never wasted time on
facilitating a serialized flame festival, my battles are won swiftly
by not becoming irrational) seems to lead the unqualified net kook
into a quick assumption your John Mackey and are one in the same...
which, really, isn't that significant, since it's OBVIOUS to anyone
who bothers to look, isn't the case-- yet the UNSUBSTANTIATED
suggestions of impropriety, in the volume they've been being made in
some periphery newsgroups, are indeed of and unto themselves enough
for me to have actively solicited for a pointed statement to the
contrary be made here to counteract all of that. In any event, this
was (I'm assuming) YOUR John Mackey's only motivation for having
started this thread.

S. John

obfd@aol.com (OBFD) drooled all over himself while attempting
a coherent thought:

> AND this guy calls him "toilet boy", accusing him of "lying"
> like a broken record... (for lack of anything of SUBSTANCE)

OK Opie, here's a little "substance" for you to examine. It's
been proven that Toilet Boy has lied about the following points:

1. He claims that he has written several articles for the ARRL
and other technical journals.

I proved he lied here. Check DejaNews and you'll see the evidence.

2. He claims that he did not forge cancel over a hundred posts
in the scanner newsgroups.

Two individuals from the Erols system posted the proof that
Mackey's denials of responsibility were lies.

3. He claims that he has a Masters degree.

In the absence of proof, he lied.

4. During May and June 1996 he claimed he had children and was
half Indian.

During the same time period, he also claimed he had no children,
and that he was full blooded caucasian. One of the two statements
has to be a lie. Either way, he lied. The evidence resides on
DejaNews. Look it up.

That's enough to make my point.

> AND Mackey is an Extra Class Ham, which is prob more than the
> guy obsessed w/ toilets will ever amount to...

I have an Extra Class License. I, like Toilet boy, also have a
General Radiotelephone Operator License. However, I have the
Radar Endorsement, Mackey doesn't.

I also have Journeyman Rating ISCET Certified Electronic
Technician, a PCIA Certified Mobile Communications Technician
(formerly NABER Certified Two-Way Radio Technician), and an
A+ Certified Service Technician endorsed for DOS/Windows.
Your beloved Toilet Boy has none of these.

Hi...

I have a question about a note I saw in the Orange County CHP CAD CGI thing. You know what I mean. :)

The CHP issued a sigalert bulletin to Orange County Communications (control-one). One of the CAD notes reads "FYI SIGALERT WAS ISSUED UFN". What does UFN mean?

The incident can (might) be found at http://168.145.1.186/win-cgi/CADii.exe/OCCC415

Thanks,

Chris Stankevitz

Hello all name is Pat and, UH Yep. A 7808 is a +8 volt three terminal regulator chip. It is there to take the 12 volts or whatever from the battery or walWart and convert to the proper B+ the radio needs to operate. The fact that it gets hot is there is a dead short somewhere in the radio. Unless the chip has 78LO08 designator in will sink over 1 amp of current at a dead short....and survive, just don't push your luck. Either a transistor has gotten a emitter to collector short, or a capacitor has shorted, or one of the IC'S has internally shorted. The fact that it runs for 5 minutes leads me to suspect that something is getting too hot and then shorting thus making the 7808 get hot. Try hitting some of the internal parts with some freeze spray see if you can isolate the area.

Face it you need a service manual and a VOM and a scope would be nice and trouble shoot the sucker. Good luck

I've addressed your quantity of "on-topic messages here" in another post and won't repeat it here. Look it up for yourself. As to the "legit ID," you show you hypocrisy yet again, Toilet Boy. Imagine, you of all people getting upset about someone because they don't have an ID legitimate enough to suit you. Now it is you that is jealous because he's beaten you at your own game.

> > > He has been asked for his REAL IDENTITY numerous times

I like the truth very much. That's why I shove it up your nostril so often and why you have such a problem with me. The truth you run from, burns inside you like a hot poker in the eye. When I voice the truth about your lies, you run like a coward from that truth. You resort to feeble attempts to silence my voice with rogue cancels. Keep canceling, Toilet Boy. I can repost faster than you can cancel. For each and every post you cancel, the digital bloodhounds get closer and closer. Can you feel the heat, Toilet Boy? Think now, is that the heat from the truth that burns within you, or is it the steamy, stagnant breath of the bloodhounds right before they rip the last sordid vestiges of life from you? Think quickly, Toilet Boy, which is it?

You may be the contact person of record, but that does not
establish you as being responsible for the growth of PARG.

> that I am the trustee for the club call of K7PDX.

You're such a gullible twit, you'll sign anything.

> > How about fcc reports from the various incidents you have
> > bragged about. Your name only figured in 1 such report as
> a "supporting member of the

> So then you admit that I am listed, thank you.

No, Hawke correctly identified you as the contact person who
provided the information to the ARRL. You were *not* listed
in any of the three statements as a participant. Only *one*
document listed you as a source of information, nothing more.
I posted my analysis of all three statements and I can post it
again to refresh your defective memory. Unlike you, I can back
up my ability to recall posts. Don't like that Toilet Boy?
Well, look it up in DejaNews then.

> > However, the question remains: why have so many people put

YOU are the target of more kill filters than any other person
in the scanner groups today.

> > Well, lets see. I have, on my hd, some 79 articles from you
> in the last 8 days. Perhaps, I'll zip them up and send them to
> the President of PARG (as one file) and let him read all that
> you have wrought. I am sure he would enjoy having a 300 K

> zipped file sitting in his mailbox (and that

> In other words, you intentionally want to spam him to make trouble.

You've incorrectly used the term "spam." To spam is to transmit the same message across multiple newsgroups, usually more than twenty-five. Whether he finds the information causes the president of PARG trouble is subjective. He just might find the information enlightening at that. Hawke should send it to your president.

> other stupid bullshit deleted to preserve bandwidth.

You mean you deleted more truth that you are afraid to face.

-=KA0SSF=- <jmackey@usa.net> tried to deflect the issue (his stupidity) by whining:

> Once again Richard Kendrick spews with crap that has NOTHING
> to do with the currect topic or the subject of this NG!!

> Kendrick, have you EVER posted an on topic message to this NG?

Just for fun, I examined yours and my posting history for the last three months. The results of my examination were amusing.

I looked for on and off topic messages. Now so you understand what I mean by "on" and "off" topic, I'll tell you the definitions I used in my search criteria. They are:

On Topic - Something that has to do with scanners in general, receiver repair, receiver usage, or parts procurement

Off Topic - Anything that is not covered by the on topic definition

While you were involved in *many* discussions (mostly inane rambling), the only subject headings where the content was (even remotely) on topic are:
- Oscillator Tuning Tool
- WD-40 Usage In Radios
- PRO-2009 Question Regarding IF Frequency
- PRO-64 Trunk Tracking Scanner
- Receiving Satellites

Now the subject headings where my content was on topic:
- MAX 232 Chip Procurement Question
- PRO-43 Memory Chip Procurement Question
- Unblocked FRG-9600 Technical Clarifications
- WD-40 Usage In Radios
- Using TV Antennas With Scanners
- Posted Listing of Phoenix, AZ Airport Frequencies

Here are the totals. As usual, Toilet Boy, you can check them from DejaNews ;-).

| Mackey | Kendrick |
Month | Total | On | Ratio | Total | On | Ratio |
| Postings | Topic | On:Off | Postings | Topic | On:Off |

JAN | 174 | 3 | .017:1 | 35 | 2 | .057:1 |
FEB | 197 | 3 | .015:1 | 51 | 4 | .078:1 |

MAR | 128 | 2 | .016:1 | 50 | 4 | .080:1 |

Total | 499 | 8 | .016:1 | 136 | 10 | .072:1 |

The numerical statistics were also quite amusing. It seems you've posted 3.67 times as many times as I have and said a lot less. Tsk, tsk, Toilet Boy, so much noise and no substance.

I've still got you beat when it comes to on topic posts, Toilet Boy.

538. discrimator location for the r7000

Thank you, Jack. I have Smacksie on my Shit List
and don't see his posts anymore. I'm glad to
know that he's taken up the call with OBFD@AOL.COM
on that score.

OBFD sent me an email threatening to "expose me",
so obviously he and Smacksie are in cahoots. They're
so tight, those two, that the only way you can
separate them is with a crowbar. They might
even be one and the same idiot for all I know.

I don't know where they drag their crap up from.
Mackie recently claimed I was on AOL, no less.
And he likes to think I never held a 1st FCC Phone
ticket with radar endorsement, and he can't stand
the thought of my being an engineer. Our dear
lad, Smacksie, has utterly no regard for truth.

But anyway, I have never had a warrant out for
my arrest (that I know of) and I've been jailed
only twice in my life.....and those were years
ago....for being drunk, disorderly, committing
mayhem and running amok..

And even those were thrown out in court. The
witnesses failed to appear both times. Nowadays,
I am a gentle, peace-loving sort of dude and
don't drink anymore or commit mayhem.

I was thinking about finding me a hamfest up in
Oregon to go to, though.......

;-)

Hi Sal.

Smacksie misses all those who hose him the
worst, especially when they back off and
give 'im some slack. He can't stand going
without for very long....if you know what
I mean. One of his favored expressions is:

"Ooooohhh, that hurts soooo goooood!"

But he's a quadrasexual hermaphrodyte, if that
helps explain the situation. And...SHE is a
"very active" (read promiscuous) VE for that
phony amateur radio group up there in Portland.

I hear you are going to meet her at a hamfest
one of these days?

Bill

Pretty awesome, IMHO. Have you checked
out their web site at:

http://www.winradio.com

WiNRADiO's RF Spectrum Scope is second to none,
and it's the fastest computerized radio around
at 50-cps.

Not only is it pretty cool now, but some hot and
great stuff has come out for it, and more is on
the way.

WiNRADiO is worth a long, strong look...

Why?

The PCR-1000 is slower than molasses in a winter blizzard.
And it's "spectrum scope" is hardly more than a bargraph.

It's an okay radio, yeah. But why do you think it's
better than WiNRADiO?

>

I bought the PCR-1000 a couple of months ago. Thought about the Winradio but opted to buy something that was independent of the ISA bus. Besides, the PCR-1000 is more portable - in that I have installed the software at home and at work - and can easily port the radio itself back and forth. Would be way too much trouble to do so with the internally mounted Winradio.

Only drawback I've seen so far is that Icom steadfastly refuses to document the control code protocol used witn the PCR-1000. This information is slowly becoming available via reverse engineering efforts, but it still amazes me that Icom has been so stubborn about this.

The radio reception itself is supperb in IMHO. I gave up an AOR8000 just to get this radio and have no regrets. Only area the AOR8000 beats it in is portability. And I seldom ever took the 8000 out of my office anyway.

I suspect you'd enjoy either radio. Both have had good reviews. BTW, the scan rate on the PCR-1000 is roughly 20 cps using Icom's software. With ScanCat Gold you can tweak it to be roughly equivalent to the Windradio's 50 cps if you so choose. I even got it working at 80 cps but found it sometimes failed to stop on some marginal signals - probably due to insufficient sampling time.

For Sale:

Icom R-100 wideband receiver. This set is in excellent condition and works great. It receives from the Broadcast Band through microwave (I don't recall the exact frequency range offhand), including the 800 cellular bands, which ARE NOT blocked. The R-100 is quite sensitive, and I've been enjoying the shortwave reception in my car. The set provides AM, FM, and Wide FM modes, selectable tuning steps, and has an excellent Auto Store feature. See all the particulars at www.icomamerica.com.

This set retails for over $700. with the cell bands blocked. I'd like to sell mine for $375 shipped, OBO. I'm selling the set because I've decided to add a mobile HF rig to my car.

Please reply to tony@bright.net, or call me at (419) 523-5000 8AM-5PM Eastern Time.

Thanks & 73,

Tony Schroeder N8SNC

The 2004 is solidly made, and subjectively enjoys superior reception
capabilities than its successor, the 2006.
Unfortunately, it suffers from reliability problems, due to deterioration
of the plated through holes on its circuit boards [my 2004 included!].
this has been cofirmed to me by staff at Tandy,s national repair centre,
but it would appear that the problem was associated with a particular
production run,
and was rectified on later examples.

As an owner of one, and as a ham operator who has a spread spectrum project on the bench, I'll point out that a spread spectrum phone is secure from casual scanning. It is not immune to monitoring if the equipment or the operator is sophisticated enough.

For example, if the transmitter uses direct sequence BPSK spreading (not QPSK spreading), then one can monitor the signal by listening to the second harmonic of the signal. The spread spectrum cordless phone I have is digital, though. However, decoding the digital transmission is not impossible for the most determined sort.

Bottom Line: with the current technology on the market it takes enough determination to intercept a spread spectrum transmission that one should be more concerned with someone placing a wire-tap on the phone line leaving your house.

Thanks, Jake. Given that, does anyone know of a certain brand or models that fall into this category, or know of a source to compare the secure qualities of 900Mhz phones? Which one do you use?

Aside from the fact that you may greatly de-tune your antennas by changing
the lengths of cables, the proper cables for rg59, if that is what you
really have, and not rg58, would be F59 male plugs and F81 bushings. The
video connectors are quite low loss. If you have rg58, you should at
least use bnc connectors.

I have had a trunk tracker for 3-4 months and have been really enjoying it. However recently it has begun to either be unable to get the data channel or else it loses it and then cannot get it back. It will usually begin tracking the next day.

anyone else had a problem like this one?

is it in the scanner?

Maybe in the Sacramento CA county system I have been tracking?

I would appreciate any help in finding a starting point on resolving this problem.

thanks

604. Scanner Antenna questions

Newsgroup: rec.radio.scanner
Date: 1998-04-06 00:00:00 UTC
From: Dennis Wenger <Dwenger@worldnet.att.net>
Message-ID: <6gbcgt$jkj@bgtnsc03.worldnet.att.net>
Source record: 164543

Can someone repost the info on turning a TV antenna into a scanner antenna
?

Also, is it possible to ..."intermingle" (don't know the correct term) a
scanner antenna WITH a TV antenna, for the betterment of both, or would it
only deteriorate both ? If they can be used jointly, how would they
connect, since I cant find a RG-58 to "F" adapter in my RS catalog.
Different wiring on the scanner ?

One more question. I would like some other sources for scanner antennae's,
other than RS and Scanner World, which both seem to have a very limited
selection. Other sources, preferably with Internet Websites
would be appreciated.

I bought a 2006 from a guy who bought a whole bunch of them (some were new,
some were slightly used) at a US Federal Government surplus property
auction. It seems that some three letter agency purchased a few more than
they needed for their project.

Isn't it funny how they pass a law that says you can't manufacture these
scanners any more and then they dump a bunch of them on the surplus
market...

Hi all,
After much of the weekend looking for the real discriminator output on the Yupiteru MVT7100 receiver, I have the following to offer.
The discriminator output (for Narrow FM) appears on pin 9 of the TA 31136 sufrace mount chip on the IF board. However the output level of this is pretty high, and I have found that my Hamcomm slicer interface works well (and this is probably recommended) if you tap the discriminator not at this point, but on the other side of the 56k surface mount resistor which takes the unde-emphasised audio to pin 8 of the 4066 surface mount IC.
If your slicer interface does not like the lower level, I guess you could take the high level output, but make sure you use some form of protection against shorting, such as a 5K ohm bleed resistor.
Now, some interesting things: This point that I mentioned here works perfectly for PD (pager Decoder etc) but I really wanted it to look at an EDACS control channel, 9600 bps, which it did not do initially. Switching the radio to AM mode worked! I have one theory on this: the output that I describe is constantly on, but selecting different modes alters the bandwidth, with AM selected over FM seeming to give a slightly wider bandwidth, which helps in decoding fast datastreams. The damned thing even worked when selecting SSB (work that out!) but no output is detected for wide-FM.
So, there you have it. If your discriminator tap doesn't work using this info, try bleeding off a higher level output, and try selecting AM mode.
Thanks - Jason

I'd say something is very wrong! If you have a decent external antenna coupled with a decent cable. (try never use telescopic or indoor one...)

I have seen a 2042 with an external discone with _considerable_ lengts of cable (REAL cable, like "LX RG 213 UBX") , perform _much better_ than for instance an UBC3000XLT or any typical RS PRO handheld...

The Pro-2042 is supposed to be as good as they get today,the 2005/2006 is history, but probably even better in some respects..

Regards,
Knut

HI
A COMMON PROBLEM WITH THESE SCANNERS IS HAND OIL GETTING UNDER THE BUTTON KEYS
YOU CAN TAKE THE RADIO APART AND CLEAN THE RUBBER BUTTON PAD WITH WARM WATER
AND A MILD DISHWASHING SOAP .
GENTLY WASH THE PAD WITH YOUR HANDS AND SOAPY WATER AND RINSE OFF .
DO NOT USE ANY SCRUBBING MATERIAL!!
LET AIR DRY AFTER USING A TOWEL TO REMOVE THE MAJORITY OF MOISTURE
THEN USE DENATURED ALCOHOL TO CLEAN OFF THE TRACES ON THE CIRCUIT BOARD BY
USING A Q TIP DIPPED WITH THE ALCOHOLAND AFTER CLEANING THE BUTTON TRACES USE A
RUBBER ERASERTO CLEAN THE CONTACTS UNTIL THEY ARE NICE AND SHINY AND WIPE ALL
REMNANTS OF THE ERASER OFF AND RE ASSEMBLE THE RADIO
ALSO CHECK FOR TRACES BEING EATEN BY BAD BATTERIES AND IF THAT IS THE PROBLEM
YOU HAVE TO REBUILD THE TRACES USING OF COPPER WIRE
GOOD LUCK AND E MAIL ME WITH ANY QUESTIONS
AND I MAY BE ABLE TO FURTHER HELP YOU IF YOU ARENT ABLE TO DO THE REPAIRS
YOURSELF LET ME KNOW AND I COULD DO IT FOR YOU FOR AROUND30-40 DOLLARS
DEPENDING ON WHAT NEEDS TO BE DONE BUT TRY THE ABOVE STEPS ABOVE IF YOU ARE
ABLE TO
JIM>I have about a 5 yr old PRO-37 portable Radio Shack scanner.

Source record: 164643

I have tried every combination of wiring I can think of and still cannot get the Pro-64 to load with either WLoad64, Load or Load64.

I have tried it with and without the resistor, with pin 3 open except for the resistor and on COMM3 as well as COMM1.

I also upped the character delay and interline delays to 10 and then 50 ms but still no response from the radio.

It just keeps saying PC/Pgm.

Is the radio ready to go back for service or is there something else I can try?

Is this true of band-tuned vs. general coverage rubber duckies? I monitor mostly aviation VHF and am looking for better reception. Do you feel that I probably won't find it in a rubber duckie made for that frequencie range (if there is such a thing)?

>You have only to connect a base-type antenna for even

Any kind of base-type antenna? I was under the impression that the rubber duckies outperformed at least a simple dipole. Am I off here? I could easily fabricate a 1/4 wave dipole or ground plan and put it in my attic. I haven't done so thinking that it would substantially help. Besides, I still need a good hand held solution.

What do you recommend for the best band-specific reception for a hand held?

Thanks,
Greg

> is such a thing)?

Specially tuned antennas are an exception to what
I said above.....at least, they can be. When you
narrow the bandwidth, the opportunity for GAIN goes
up. Now as to whether any particular antenna has
more gain than another remains to be seen/ But
there is a better chance of it in your exception.

> >You have only to connect a base-type antenna for even
> >a few seconds to compare the difference. It probably

> >portable antenna....basically another rubber duckie.

> Any kind of base-type antenna? I was under the impression
> that the rubber duckies outperformed at least a simple
> dipole. Am I off here?

Well, bluntly, yes. Even if a duckie were tuned to the
hilt, the best it could emulate would be a dipole or
perhaps a quarter-wave groundplane. Now you put up
a simple dipole 20-ft off the ground, and it will clean
the clock of any duckie at ground level.

> I could easily fabricate a 1/4 wave
> dipole or ground plan and put it in my attic. I haven't
> done so thinking that it would substantially help. Besides,

> I still need a good hand held solution.

Yes, handheld solutions are a different breed from
fixed solutions. A dipole or groundplane in your
attic would, in most cases, way outperform the
duckie at ground level. But that doesn't help
you when you're traipsing across town..... so
you'll still need the duck. And I am not convinced
that one is any better than another, so long as
both are reasonably well designed. Seriously,
though, you can stick an 8" wire in the BNC of
a handheld and it will perform favorably along
with a duck. It won't beat it...and it might lose,
but there won't be a night and day difference.

> What do you recommend for the best band-specific reception
> for a hand held?

Well, that Radio Shack center-loaded telescoping whip
is tunable....and for a variety of needs, it is
hard to beat. For a pure rubber duckie, I really
don't have a recommendation,,,,especially for band-
specifics. Now once upon a time, CRB Research of
Commack, NY carried what they touted to be a superior
duck. But claims are one thing. And I really don't
know what such antenna do when put to the test.

I use my normal rubber ducks when doing some serious
boogey-trucking by tennis-shoe-express, and a magnet
mount dual center load for the vehicle, and the
centerloaded telescoping whip for other occasions.

Hi,

Remove the top cover of the R-7000 and it is the LEFT side of resistor
R97. Facing the receiver, R97 is about midway between the front and
back of the board on the left side.

R97

I have been collecting information on the Louisiana State Police Motorola Smartzone system, and need help filling in the blanks.

Folks that can run the trunker utility, please help! We are looking for Site ID's for specific locations, as well as data channel channels for each of the sites.

Below is what I have so far. If you can help update this list, please send information to lblant1@airmail.net Thanks to the folks that have helped out so far!!

Thanks!
-LB

Oh, I see.

So, if I asked you, if you now confessed to being a child molester,
NUMEROUS warrants on file at the Beaverton OR Police Department,
as well as LONG and illustrious history of run-ins with many different
law enforcement agencies in that area, for criminal impersonation of
a law enforcement officer, that would be fine?

Or how about ...

John, have you finally confessed to sexually abusing your mother?
Remember, when you made her do all those acts in front of a bunch
of local teenagers? When you invited the family dog in to help
service her?

Hello,

I am using the MDT.EXE prog and it works 100%. The problem is my local PD (Nassau County, NY) is using three different channels and the data traffic seems to be unevenly split across the three channels. There seems to be no rhyme or reason to what it on what channel. For instance sometimes 1st pct is on the second channel, sometimes (only a few sec later) it is on the 1st freq. I am very confused.
Does anyone have any similar experiences or possibly a suggestion of what I could do to be sure I recieve all the traffic.
I don't know if makes a difference but these freqs are in the 484.XXXX and 485.XXXX range.

Thanks and 73 to all

-Adam N2RCC

BTW- There seems to be more activity on 483.8625 and less on 484.3625 and 484.6125. Also on 484.6125 sometimes the more powerful signal drops out and a weaker one come up (possible a mobile unit or something)

I recently acquired a handheld Bendix/King two-way radio and need help in identifying it. It came with a BK rapid battery charger and extra battery and if I can't figure out how to program it, then I would be very interested in trading it for a good scanner or shortwave radio, preferably wideband. Where do I look for identifying marks? Any help would be greatly appreciated.

If you are interested in the Bearcat TRUNK TRACKER BC-235XLT handheld, let me know. I have three scanners different scanners and although the Trunk Tracker works perfect, I am downsizing in my life and will later on re-buy perhaps the desktop Trunk Tracker.

Purchased around Nov/Dec '97 from Scanner World. Have packaging, receipt (transfer warranty?), all manuals....perfect condition, has not been used outside but only at my desk. Two battery packs with extra external charger.

$200

Darren

-=KA0SSF=- <jmackey@paXrg.org> tries to lie his way out of
his predicament with Sprint:

> I am thinking about changing to a new ISP. The reason
> for this is because sometimes when listening to Real Audio
> broadcasts the streaming gets fouled up coming from my ISP.

ROTFLMAO! Yeah, right Toilet Boy. You're up to your slimy
ear lobes in fecal matter. You're a quart low because
excessive prozac consumption absorbs bile.

You, as well as I, know you're about to have your account
with Sprint terminated any moment now. This is your wimpy
way of posturing so when you lose your account, you can say
"I quit Sprint, they didn't terminate me." You're a liar,
Toilet Boy. I tried to tell you, your account was under
surveillance, but, no you wouldn't listen.

Here's a premade check list of all your favorite excuses you
can use to whine and snivel with:

___ You're a fool and don't know what you're talking about.

___ If I'm a liar, post the proof. Put up or shut up!

___ There you go changing the subject, trying to avoid the
truth.

___ Sprint was a crummy ISP, so I quit them and found a
"real" one.

> So I wonder what others have found to be a good ISP?

One that does not have you for a customer.

> I am considering MCI, does anyone have anything to say about
> them?

Yes, sign with MCI, pull the same shenanigans there, and they'll
terminate you just as fast as Sprint. You'll find the next ISP
just might be onto your little tricks much faster this time.

> I want an ISP with local dial in access in Portland, Seattle,
> Salem (Oregon), Sioux City & 800. I also want one that supports
> 56 connections. Any suggestions?

Use your favrite ISP, AOL. They'll love you.

Source record: 164334

-=KA0SSF=- Everybody's favorite village idiot sniveled:

> Thank you for acknowledging the numerous on-topic messages I
> make!

I was extremely generous when I said you were "on topic." For
clarification,
let's take these one at a time.

- Oscillator Tuning Tool
Your attempts to dispel the efficacy of metal tuning tools in
highly
selected circumstances was useless. Your total lack of experience
shows just how little you really know or understand about the
nature
and behavior of RF circuits. Your lame spouting of about metallic
tuning tools is only because your nemesis Bill Cheek explained
their
usage in certain applications. Several people had to explain it for
you and correct your errors. You got it wrong, Toilet Boy.

- WD-40 Usage In Radios
WD-40 is a highly effective cleaner and lubricant that can be used
in
selective applications. Your lack of experience, again, comes to
the
fore when you spout off as you did. The flammability is not an
issue *if*
WD-40 is used prudently. Consider that millions of women worldwide
use
hair spray routinely. Hair spray is *very* flammable; ever try the
trick
with a lighter and make a pseudo flame thrower? Again, you got it
wrong,
Toilet Boy.

- PRO-2009 Question Regarding IF Frequency
Giving someone the IF of 10.7 MHz doesn't even require looking at
the
radio. So many FM radios use 10.7 MHz as an IF, you could spit it
out
and have better that a 50:50 chance of getting it right.

- PRO-64 Trunk Tracking Scanner
Since you work in a Radio Shack, you would be able to have a
customer

read the manual to you and learn that this radio is capable of monitoring trunked radio systems.

- Receiving Satellites
Who explained satellites to you, Richard Simmonds?

> hahahahahahahheehehehehehehehehohohohoho

Another brain stutter.

> Gawd, I DON'T BELIEVE IT!!

Still can't face the truth that you're a moron.

> You must have NO LIFE if you had nothing better to do than to
> sift thru a total of 635 messages over several months &
> give each individual message a rating!

I'm very good at ferreting out information, especially given the power of DejaNews search filters. The whole data search took ten minutes and the analysis took another five. For me, spending a measly fifteen minutes to dispel more of your lunacy was a pleasure. Eat your heart out, Toilet Boy.

Behold brothers and sisters, I bring you the profound story of how King Mackey the Great became so. It is an exciting tale filled with wonder, awe, and heroic deeds. Come closer, as I relate this grand history.

In the land of Scannerdom, the county of Power Supply was plagued with a terrible injustice. The evil mercenary force from Capacitor held the people of Smoke prisoner. Repeater, the ruler in exile of Power Supply, offered a rare and unused Radio Shack battery card to anyone who could free the people of Smoke from their Capacitor prison. A young and fearless warrior stepped forward to take up the gauntlet. Repeater told him of the dangers but the young man was undaunted and resolutely set off to free them.

When he arrived at the gate, Mackey was challenged by the fearsome guardians, Positive and Negative. So terrible were these mighty sentinels that even the renowned guardian Cerebus trembled when faced with Positive and Negative. Armed with his trusty screwdriver he didst battle with them. In the hands of a true warrior the screwdriver is no common weapon. Our hero, battle tested and proven in the labs and urinals of Technical School, was much more than a professional. He was a Grand Master of the Number Two Phillips Blade.

The guards fired spinning hex nuts and sliced with the dreaded razor sharp quartertwenty threads. Again and again, using every feint, lunge, and parry the guardians had learned in centuries of defending the cabinet, but to no avail. Mackey maneuvered himself and with one swift strike, he ended it. He had touched both guardians in the only way to kill them. He bridged the gap between them in a move only a Master Bladesman could execute, the Short.

The Capacitor force exploded from the cataclysm releasing the Smoke from their electrolytic bondage. Afterward, the Smoke rewarded Mackey with their highest honor, the Diddler of the Spark.

Mackey, hoisted by his own petard, began the journey home. In the land of Recdotradiodotscanner, he was attacked by the Legions of Ennui. These were no ordinary warriors, but elite shock troops. Armed with the latest in Apathy, Disdain, and Contempt, they lay siege to our hero.

For months, a battle of attrition was waged. One after another, mighty warriors all, they fell. Even I, your humble scribe was a soldier in the Legion of Ennui. Alas, I too, fell before the great Mackey. No one could understand how a single man could withstand such an onslaught as we heaped upon him. Then we learned the source of his great strength. He was the most favored disciple of the malevolent gods, Fraud and Liar. They had taught him the secret fighting languages of Turpitude, Innuendo, and the most deadly of them all, Obscenity. Under their smutty tutelage, he repeatedly repelled the attacks with adroit displays of oratorical onanism.

There was a point in the war when we thought we were going to prevail. We had Mackey surrounded, he was in everybody's kill file, and his ISPs were terminating his accounts as fast as he could login. He had been beaten back to where he stood alone, armed only with a 300 baud modem and a Commodore 64.

Sadly, we all were victim to his great strategy and now he sprang his most devastating weapon. Surrounding him with our keyboards poised for the final death blow, he hoisted his hands above him. Like Moses bestowing the Ten Commandments to the chosen people, in his hands his mail-order diploma proclaiming him Master of Communication Technology smote us down.

Cowered by the supreme Divinity before us, a hush fell upon the surrounding army. The only sound was a muffled cough from one of the younger soldiers. We lay prostrate on the ground before him, fearful of his wrath. Who were we to show the temerity to challenge his divine turgescence. We waited. Slowly, he walked through the defeated masses, and went home.

Upon returning to Scannerdom, he found word of his great deeds had preceded him. He was declared Supreme Grand Master Fool of the Universe and the people clamored for his ordination as King. In response, the Church of Scanner Mods proclaimed him King and the great sage and visionary Pope Bcheek presided over the coronation. As he placed the Discone Crown upon his head, he spoke the sacred papal blessing, "This boy reeks."

So there you have it, brothers and sisters. Behold the saga of his fetidness, King Mackey the Great, Ruler of Torpor, Supreme Grand Master Fool of the Universe, Grand Master of the Number Two Phillips Blade, holder of the Diddler of the Spark, Divine Master of Communication Technology, High Priest of the sect of Fraud and Liar, and Orational Master of Turpitude, Innuendo, and Obscenity.

All hail King Mackey the Great Liar.

679. MDT doesnt work, POCSAG does

Newsgroup: rec.radio.scanner
Date: 1998-04-07 00:00:00 UTC
From: Chris Stankeviz <cstankev@NOSPAM.ucla.edu>
Message-ID: <352AEAFA.422D@NOSPAM.ucla.edu>
Source record: 164350

This may be a long shot...

I have the 'quick and dirty interface' (instead of the 'all in one')
running on my 2042. POCSAG works *sometimes* (I've had about 2 good
sessions of the past 10 or so). PD.EXE 'registers' the scanner input,
as I can see in the 'status twirly thing' on the screen. MDT1234W
doesn't work at all with Ardis or other presumably Motorola MDTs in the
area. I've tried reverse polarity. I'm not running under Windows. I
just get the "Checking for incoming data on COM3..." message
indefinately.

Any ideas? I'm on the 10th floor of my dorm... with a couple concrete
walls. The signal (voice and data) sounds fine, though...

Thanks,
Chris Stankevitz

Yeah Right!

I don't think you'll find many ISPs that will put up with your
CRAP! By the way, Rogue Cancels are a violation of Sprint Net
Terms of Service so I don't think you have much time left.

Regards,
John

ps: I don't think you'll be able to cancel this one John!!!

682. REPOST: [REPOST] MORE ROGUE CANCELS in rec.radio.scanner from SPRINT!!!

OK, Toilet Boy, you've canceled this message before. I can keep posting it faster than you can cancel it. Each time you cancel, the trail back to you gets better and better. Since your account is under surveillance now, keep it up.

Now why would you keep canceling this message? What could you find in here so offensive? Oh, I know, the truth about you. So you're running and hiding from the truth again, eh, Toilet Boy? No surprise there. Nyuk nyuk nyuk. Read 'em and weep, Toilet Boy.

689. Trunktracker question

Newsgroup: rec.radio.scanner
Date: 1998-04-07 00:00:00 UTC
From: Adam Lane <alane@thegrid.net>
Message-ID: <352B15EC.1B4F@thegrid.net>
Source record: 164360

I've been monitoring the Alameda County trunk for a few days
now, and i've got a few questions...

Occasionally, I see an ID with an odd number. This may be an
indication that the system is not actually a type II trunk, but
is a hybrid between type I and type II. I've toyed around with
programming my scanner to scan a hybrid trunk, but it's quite
confusing and the manual leaves one wanting more information.

I've searched the Motorola site for information about their
trunk system to no avail.

Can anyone suggest a source of more accurate, technical information
about Motorola trunked systems, especially relating to hybrid trunks,
ID encoding and the like?

For example, if you program a hybrid trunk with block #1 set to
type 10, all of the 16xxx codes turn into 103-x codes. Gee;
it would be really nice to understand a bit more about the
underlying system. The manual does what it can in 6 pages...but
it's not much help.

690. heathkit receiver for sale

Newsgroup: rec.radio.scanner
Date: 1998-04-07 00:00:00 UTC

I have come upon a Heathkit GR-64 Shortwave receiver. I would like to sell
it.
It looks clean. All tubes glow. I have heard the WWV on it but I can't say
that it works perfectly. I will say that it needs work. But then what
receiver of this vintage doesn't.
No box no manual.
$25.00 or best offer plus shipping from southern California takes it.

Well, Another Mackey lover.
Oh Big F ckin Deal, Have someone read through some of the last
postings from Mr. Cheek & when they get done, ask them what they read. Mr.
Cheek CLEARLY stated that YES, he HAD been arrested...MANY YEARS AGO. Way
back before you grew your third brain cell.
The point is that he never tried to hide it, was up-front & honest. You &
Mackey just don`t understand the concept of honesty, do ya?
Maybe you can borrow mackey`s seeing-eye dog and have it bark what it
reads to you in your own language, you little son-of-a-but anyway, when you
go pickup Johns mut, stop by WAL-MART and get a life.

Get lost punk!

Charlie

I put mine in a hollowed out wheelchair. But be sure it's electric andyour
ridding in it while your scanning. I think the RF from the chairs DC motor

keeps it from being detected.

Remove NOSPAM from my E-Mail address to reply, Eric.

695. Re: HF receiver

Newsgroup: rec.radio.scanner
Date: 1998-04-07 00:00:00 UTC
From: jtward01@aol.com
Message-ID: <1998040701305400.VAA12442@ladder03.news.aol.com>
Source record: 164400

There are decent receivers for HF military in almost every price range from about $200 and up. Of course, you get what you pay for, so a $200 portable isn't going to perform like a $2,000 professional receiver. Now, quickly, some to check out:

$200-$250 - RadioShack DX-398; RadioShack DX-394

$400 or so - a used Yaseu FRG-100 or Drake SW-8

$500-$600 - a new Drake SW-2; new FRG-100, new Lowe 150

$600-$800 - a used Drake R-8, ICOM R-71, Kenwood 5000 and many others.

$1,100 - new Drake R-8B, Kenwood, ICOM etc.

$2,000 - ICOM R-8500; AOR AR-5000

Good luck.

John Ward

697. Re: CG Helicopters

Newsgroup: rec.radio.scanner
Date: 1998-04-07 00:00:00 UTC
From: JPGRIFF <jpgriff@nospamworldnet.att.net>
Message-ID: <6gc0d1$c7l@bgtnsc02.worldnet.att.net>
Source record: 164402
Cross-posted to: phl.scanner,rec.radio.scanner,alt.radio.scanner

Interesting news. I read in the news that the CG was closing Air Station Brooklyn and relocating their units to Atlantic City.
Most active HF freq's I have logged are 5696 and 8983 kHz USB. On VHF, the helos usually operate on the USCG marine channels. Try 157.05 157.10 157.15 157.075 157.125 157.175.
Several UHF freq's are designated for air ops, but I've never logged any activity on them. 282.8 381.8 381.7 258.3 383.9
Scanner Master lists 164.3 as in use by Air Station Brooklyn.
Good luck
John

Hi Bill,

Yeah, the hamfest thing kind of interests me. Mackey says
there is a big one in Seaside Oregon in June. With a opportunity to

eyeball him and having never been to a hamfest, I could kill
two birds with one stone, so to speak.

I have a Pro-51 also, and had the same problem, the markings on the
motorola discriminator chip are not clear, try all possible combinations
of Pin 9, don't worry you wont mess anything up, if you hook up the right
pin to a set of earphones and the ground to the other side of the
earphones you should be able to hear audio, remeber the squelch is always
off when you take audio straight from the disc.
Hope that helps, if yuou have any more questions, e-mail me directly...

John, How do you know Jack is not associated with law enforcement and checked it out through the national crime computer.
So far all you have done as usual is make remarks that have no basis what so ever and not on topic.
You want people on the newsgroup to stop their attacks on you , but you are not doing anything to make them want to .
If you would just keep your postings on topic and not reply to the people who are responding to your off topic postings then they would be back on topic also.
I guess this would be too logical for you to understand let alone actually do.

To keep things on topic, anyone know what the frequency range of the Radio Shack Pro 30 is ?

704. AR8000/OPTO Scout vs CUB?

Hi, and thanks in anticipation..

Ive got and AR8000, built the interface and found some super FREE PC
software: http://www.geocities.com...637arc.html#registration or search
ARC for Windows Homepage.
However, Im interested in an OPTO SCOUT, question is, will the AR8000
interface allow connection to a PC and what can I expect (range) etc
from the Scout? If I am willing to to sacrifice the PC/AR8000 connection
will the Cub provide similar performance and is that performance worth
the outlay?

Thanks, JT. (Whew, I sure pulled that one outa
my sweet patooty.) Never actually did that one
before. Of course, it was pretty obvious and
elementary.....but still.....

<grin>

Did you just remove it altogether, or replace it
with one of smaller value? I was kind of afraid
removing it might make it too "tinny". My good
woman hates my PRO-43 on which I did that mod.

Of course, she can hear whispers three rooms away.

I have been using a "Bell Phones" model 39500 digital spread spectrum for about a year with no problems. All I can hear on my scanner is a slight increase in the noise level around 900Mhz. It is a direct-sequence spread spectrum phone produced by Rockwell. I was leary at first, I've had a LOT of problems with Bell products before, but at less than $120 I couldn't pass up a new toy. The battery lasts for several days off hook and for many hours of talk time.

From: -=KA0SSF=- <jmackey@paXrg.org>
Message-ID: <3529E3A1.6168@paXrg.org>
Source record: 164413

I am thinking about changing to a new ISP. The reason
for this is because sometimes when listening to Real Audio
broadcasts the streaming gets fouled up coming from my ISP.

So I wonder what others have found to be a good ISP?

I am considering MCI, does anyone have anything to say about
them?

I want an ISP with local dial in access in Portland, Seattle,
Salem (Oregon), Sioux City & 800. I also want one that supports
56 connections. Any suggestions?

thanks!

>

I have to agree. I loved the Pro-2045 so much I went out and bought another one. The second one is my "search slave" - does nothing but search for (new) active frequencies. I haven't bought the tone board yet, but am planning to do so very soon. I have a BC9000 that I like very much also, but the 2045 seems faster and more sensitive. Also, the PRO-2045 is on clearance sale right now for $150. You won't find a better scanner for TWICE that price.

<brechtd@oanet.com> wrote:

>Does anyone know and confirmed the location for the discrimator output of
>the ICOM R7000

Hello Douglas,

Here is how to pull discriminator audio out of your R7000 to use with
various decoders that want clean audio. Use a short piece of shielded
cable to the spare jack on the back of your R7000:

Best is junction of C131, C84 and R99 on I.F. board. Take output
through a .01-.05 to block DC present at this point.

Not quite as high an impedance, but easier to get to from the top of
the board, is junction of R97, R99, C87, C115, etc. This is the other
side of R99 as preferred method. Again need to go through a cap.

If you have the service manual or schematic, these points
geographically are between Q13 and X3, 1/2 way down and 2 inches in
from the right of the schematic.

Be careful not to load the discriminator output too heavily, as it is
a high impedance point.

Hope this helps.

AOL is a good ISP, but I'm not going to debate that with an idiot.

The ultimate form of back peddeling happens to be cancelling other people's posts, a tactic that you have engaged in to a considerable extent.

Yes, you are a fine one to worry about bandwidth waste, given that you are by far the worst wastrel that has ever come down the pike. I suppose your current campaign of issuing rogue cancels is a feeble attempt to conserve bandwidth, eh?

fred schneider wrote:
> Can someone please tell me what an +ACI-Opto Scout+ACI- is and what it does ?
> long time scanner user but not high end user ....

Hi Fred,
The Optoelectronics Scout is one example of a frequency counter. This device is a wide-range receiver designed to sweep its entire frequency coverage in a VERY short period of time and display the frequency of the strongest detected signal.
Originally designed as a piece of laboratory equipment to test the calibration of transmitters, models are available these days which cater to the scanner community. Some include memories to automatically store frequency hits as well as various other info all depending, of course, on how much money you're willing to sink into it.
It is sort of an "art form" to learn to use one properly. Most people are under the false impression that it will capture the exact frequency they are looking for(when an agency is transmitting on an unknown frequency). It takes a bit of homework and patience to use properly and effectively.
Hope this helped and happy monitoring!

Thanks Robert! Took the words right out of my keyboard!

Glenn,
Be advised that the $400 price may no longer be in effect. iCOM
was running a promotion through the end of March on the R10 which
took $100 off the normal $500 price. And, as of April 1, there
was suppossed to be price hikes on iCOM gear as well!

>
>

Denny,

On scene air operations with the USCG Chopper and boats are usually handled on Marine VHF channels designated for the CG (Ch 21, 22, 23, 81, 82, 83). The chopper also keeps in touch with the air station while enroute to the incident on the primary UHF AM frequency of 381.8 - Only expect to hear the chopper on this channel though since the base transmission is not very powerful.

USCG boats and aircraft also have a 56 channel "LANT" radio with many VHF public safety, government, marine, and USCG 160 mhz channels programmed. This radio is DES encryption capable. The LANT channel plan is too extensive to post here. In other news Air Station Cape May and Air Station Brooklyn will be consolidating into Air Station Atlantic City this spring. Here is an excerpt from an article in Worldwide Utility News (WUN). The full text can be found in:

http://www.gem.net/~berri/wun/files/misc/uscg_air.html

CGAS Brooklyn and CGAS Cape May are both scheduled to close later this spring in a plan to consolidate buth operations into the new CGAS Atlantic City, New Jersey. According to an article in the NY Daily News, excerpts of which were posted on the rec.aviation.military newsgroup, the new CGAS Atlantic City will open for operations in early June, while CGAS Cape May and CGAS Brooklyn will close in mid-May. During the peak boating season, CGAS Atlantic City will

forward-base some helicopters with the New York Air National Guard Rescue units at Francis S. Gabreski Airport (former Suffolk County AFB) on eastern Long Island.
---- 1/98

The WUN article also mentions several good HF frequencies to listen to the helicopters communicate with CAMSLANT and COMMSTA stations.

Hope this helps,

Joe

A Pro 2005 base set, 400 channels, good shape, full capabilities, only problem is the back light is very dim. I don't use it any more, I've got enough radios already so $250 or best offer takes it. low ball offers will be ignored, if you know what this is you know what it's worth.
I would prefer a local sale to avoid all the hassles of shipping and so you'll actually see before you buy
The Pro 43 is sold,thanks.

You might want to ensure that the squelch is not set to tight. Even though the squelch itself does not function in the trunk track mode (as far as the audio output) it does have a factor in acquiring and keeping the data channel. I have found that if I have the squelch too tight the unit will sometimes lose the data channel. Adjust the squelch first in the non trunk mode and then go to trunk mode and see if that helps.

From: pathana@is3.nyu.edu
Message-ID: <6gbnp2$4cr$1@news.nyu.edu>
Source record: 164496

I have made an interface for Programs like Hammcom. This interface is
exactly "Ron Wilson's Sche." My Scanner is Pro-51. I am using Pin 9
as suggested by Bill Cheeks' article. Using 10 uf .
and trying to use a wire to make a ground and one for 10uf. No
shielded cable though.

Circuits I checked on the F/board looks fine TO ME.
But not audio transmsiion is detected. How to check the folloiwng:

1) if the scanner is transmitting the audio from Pin 9?

2) if the f/board circuits ARE NOT SHORT

3) and I am Monitoring a correct frequenct to begin with?

any help is appreciated.

DO TELL! DOOOO TEEEEL!

Above $150? I routinely see such scanners in the local pawn shops for less
than 100 (and these are the cell modifiable ones!)

Telling me to be quiet about a true statement of opinion is like waving that
carpet in front of a bull. Now, I can see where, as time goes on and these
things get a little more scarce, that the price will go up. However, until the
flow of imports is completely cut (which won't happen soon as out illustrious
customs agents aren't real sure what to look for yet), expect supplies os such
scanners to be available for a long time.

Harry,
I am not sure. I have been looking for two days. Im usually consult that page when looking at something I find interesting on an auction web. I sent the owner of the site an e-mail to see if it is moved, dead or whatever and am waiting for a reply. I'll be glad to let you know e-mail (if) when I get some info as well as post it here for all the others. I know if it is gone that it will be sadly missed by a lot of people.

I also planned to use the search and store on the federal service vhf frequencies. I have it connected to a discone at about 40 feet elevation with 9 month old RG 6 cable.On mil uhf it is great. Slightly more sensitive than my PRO 2004 and a wonderful performer. On vhf it sucks. Every signal I hear is mixed with a local pager on 152.63 mhz. Even going down to the telescoping whip I still hear the pager on all vhf transmissions. I do not have this problem with my 2004 or my 200XLT on this antenna. Of course my 860XLT hears _all_ pagers so I don't count it. Another problem I have is hearing local cb'ers on 30 - 54 mhz.I love the hardware on this unit and will probably keep it to use on mil uhf but just wondering if I really would be better off trying something else in that price range or if there is a quick fix for the vhf problem. Thanks for any replies.KenRemove the NOSPAM to reply by email

> channels you want with the data link?

You're not going to find many, if any, "mods"
in plain, free ASCII text files. Several mods
have been published for the PRO-64 in copyrighted
journals and magazines...with photos, schematics,
etc. You'll have to buy the back issues of those.

As for autoprogramming the PRO-64, it will load
400 channels in about 45-sec from a computer text
file. Yes, it is worth the $5 or so it takes
to make the cable. You cannot program cellular
freqs and other bands from the computer than the
scanner isn't otherwise set up for in the first place.

You betcha! That one was a sure-fired chance.
Now I am hearing wind of another audio mod. Seems
two blokes compared the innards of their PRO-26's
and one had a jumper wire where the other didn't.

The one with the jumper wire sounded better than
the other. So they swapped upper boards, and then
the other rig sounded better. They weren't able
to describe it very well, but from what I gathered,
it was a factory mod that provided more power to
the Audio Power Amplifier chip.

I'm looking into it deeper and will advise of what
turns up.

Rgds,

You also forged this attach e-mail this morning. You also tried to send
it to Big Mike <mscott@teleport.com> but forgot to change your identity
```

back! It was sent throught Sprints SMTP Mail server from IP Address
sdn-ts-007orportp02.dialsprint.net(206.133.225.117). Well, guess what?
It bounced again!!!

By the way, I also reported all of you Rogue Cancels to
abuse@sprint.net!

Regards,
John

John,
you'd better check with the webmaster at parg. I just got done sending
him all 113 postings you've made in the last 10 days (the most recent
being excessively abusive on your part).

Also, I've carbon copied all said postings to ABUSE@USA.NET and
ABUSE@SPRINTISP.COMalong with a complaint regarding the recent rogue
cancles originating from SPRINTISP.COM.

So john, I dare say, you are about to get the 5th degree from all sides.

Any others who have complaints may also send them to these addresses:
ABUSE@SPRINTISP.COM
ABUSE@USA.NET
WEBMASTER@PARG.ORG

Hawke

I use them everywhere now. Im my hand scanner, my camcorder, my
notebook, flashlights, etc...
NiMH batteries do not have a memory, so you can leave the scanner on the
charger all the time, or recharge them from a partially discharged
state. They don't have to be exersized. But, they loose "shelf life"
charges generally twice as fast as NiCad's (typically 20% over a week.
And, since they're about 2.5 times the capacity of a NiCad, they take
2.5 times longer to charge. So if your charger will charge NiCads in 10
hours (50ma), it will take 37.5 hours with NiMH.
My scanner has a small switch inside the battery case for NiCAD use as
Alkaline batteries are 1.5V and NiCad/NiMH are 1.25.

Nope. Your ISP(s) and thinking of getting rid of you. In fact, with all of the shennigans that you have pulled here lately--antics like forgeries, rogue cancels, theft of service--you'll be hard pressed to find another ISP.

You constantly whine about Bill kicking you off Fidonet (and it's easy to see why that would happen). Soon, you find yourself kicked off the Internet!

778. Open Letter to John Mackey

Newsgroup: rec.radio.scanner

To John Mackey <jmackey@usa.net> or <KA0SSF@parg.org>

CC: abuse@sprint.net, abuse@dialsprint.net, abuse@sprintmail.com

I think it's become pretty evident to everyone in the group that you
cancelled Several posts of Richard Kendrick wa7twi@primenet.com and
mine over the Last few days!

You also made several mistakes last night, when you attempted to send
an e-mail to some friends of yours. You obviously had just cancelled
some of my posts and forgot to change your identity back before sending
it out. I guess you didn't count on it bouncing back from
"teleport.com". Dooh!!!

You also screwed up this morning when you attempted to reply to my posts,
but once again forgot to change your identity back before posting a forgery
with my e-mail Address. Dooh!!!

Then you screwed up when you attempted to reply to Hawkeï¿½s posts, and once
again forgot to change your identity back before sending another forgery
with my e-mail Address. Dooh!!!

Then you screwed up when you attempted to cover you tracks after you
realized that you posted 2 articles under my e-mail address. You issued
2 cancels within 5 minutes after you realized you mistake. Dooh!!!

Then for some reason, you forged a post in rec.nude with my e-mail address
and then Cancelled it a few minutes later. Dooh!!!

Keep it up John! I'm sure the folks a Sprint will be very interested in
knowing why you've gone on this rampage of the last few days!

Regards,
John

I have not tried MDT, but I do a lot of (ham) digital stuff over radio
and have to second Per's suggestion - unless you tie to the discriminator
output, you're not going to have any luck with the higher data rates.

Now assuming you've done this, the other possibility is that you're
not hearing Motorola protocol. LAPD certainly doesn't use it.

Of course, from campus you probably have a pretty good shot at most points
south of downtown (I've worked handheld-to-handheld with a guy in the
San Gabriel mountains from my office in the Physics building), some of
whom may be running Motorola protocol - but being able to hear the weak
signal and being able to copy it are two entirely different things.
At high data rates, a flaky path will cause a fair amount of bit loss -
unless the MDT code makes good use of any FEC bits, that data is lost.

...And I can imagine that trying to do FEC on a relatively slow computer while
taking unbuffered data in off the serial port is at best a little problematic...

Just some random thoughts 8*)

Per H. Nielsen (phn@login.dknet.dkx) wrote:
: Are you using discriminator output ?

: If not this is probably the reason for your lack of success.
: POCSAG use a lower baudrate than MDT and may in certain cases decode
: successfully from tape or loudspeaker output.

: MDT is 4800 baud and definately requires a discriminator output to work.

Good for you... you see scanners in pawn shops. That doesn't have
anything to do with what a scanner can sell for here in this newsgroup.

Cell scanners can easily go for above $150. Period.
It wasn't an insane asking price.

Besides, if you have access to all those great scanners - why don't you
pick some up and sell them for cost, since you seem so eager to help this
newsgroup to get the best prices. :)

> GW

Hi GW,

A couple of posters mentioned that you will upset the tuning of your twin truckers if you change the length of the coaxs. This is true. However, if you calculate an electrical half-wave and then add to that the current length of the RG59 sections you will have plenty of length and maintain the proper VSWR. Even if you have too much coax now you can bundle it up and tie it out of the way. The additional losses are so minimal the difference should be immeasureable. Now that I think of it, you can replace the RG59 with a lower loss coax and probably end up ahead of the game. One more thing, you can leave one section as is and then add the half-wave (electrical) section to one side only. If you need specifics, let me know!

Cheers!

Andy

If you want to take it mobile I would recommend a 1/4 wave magnet mount antenna. If you prune it to 156MHz you should be laughing.

If you are talking in you house, you could use a quarter wave antenna and stick it up a pole. There are many very good antennas for use at the base. Not suprisingly, the more money you pay the better the reception will be.

My only advice is to NOT get an analogue tuned table radio. Splurge for
a PLL Synthesized unit. I'd look at radios made by Lowe, JRC, Kenwood,
Icom to start with. I wouldn't consider an AOR 'cuz they don't perform
nearly as well as I would expect.

Hope this helps.

Hi Paul,

Years ago with my first scanner I had the same problem. It was a Realistic PRO-2021. After studying the schematic carefully, I found that there was an ANL (automatic noise limiter) circuit built into the AM receiver chain. I removed it - I think it was one diode. Improved things greatly! I had little or no electrical noise in my neighborhood anyway.

Perhaps your receiver is suffering from the same over-engineering?

Hi Rich,

We see the same thing with the SRBs from the Shuttle launches. I've been told that as the boosters descend into thicker air, the hot gases and combustible by-products and residual fuel tend to ignite in puffs. The term used is "chuffing". It is quite visible even on the daytime images taken from the CastGlance and StarCast aircraft. I've watched many of these films in the course of my duties (Flight Evaluation Lead Engineer for the company that makes the SRBs). Really some fantastic images as the SRBs go through re-entry.

As an aside, we now have a Video camera and VCR mounted in the forward dome of the SRBs. The mic is hooked up and the unit turns on at lift off. Though no visible images are recorded until main parachute deployment (when the frustum separates from the SRB to deploy the main parachutes , there by uncovering the camera canister mounted in the forward skirt dome) the entire flight sounds are recorded. Now that is really neat audio!

Cheers from Sunny Florida

>greatly appreciated...Thanks Very Much...

The computer interface will let you program any or all of the 400
channels. The channels you don't program will remain as they were.

Whether it's worthwhile or not depends on how you use the scanner. If you
load it by searching yourself, you wouldn't need it. If you ever have a
list of frequencies that you want to load (like auto race team
frequencies), it beats the socks off punching those itty bitty keys.

If you want to use the interface, don't get ripped off by Radio Shack's
data link. Get one of the freeware/shareware programs. All the ones I
know of are at or linked from:

http://www.access.digex.net/~kplotkin/scanner.htm

Bill Cheek has a list of mods. Look for his url in his posts.

805. Pro-51 drift?

Newsgroup: rec.radio.scanner
Date: 1998-04-08 00:00:00 UTC
From: Jose Cuervo <jose512@eden.com>
Message-ID: <352C5233.7E9F73D1@eden.com>
Source record: 164298
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I have a Radio Trash Pro-51, ever since I added the 2 wires to tap the discriminator some frequencies are off by about 1Mhz, for example if i try to listen to something that is supposed to be on 155.550, its not there, it shows up on 154.550, and that goes for alot of frequencies especially in the 800-900Mhz range, can anyone help?

806. Re: Looking for 800mhz scanner

good luck chuck- you`ll need it- the only way you can pick up a
unblocked scanner is used, but they go for around 200 dollars and up-
maybe an old pro-34.....anybody else?

I use the 3 ft Fire Stick scanner antenna.
It works from medium in the 40 Mhz range and
reall good on most other bands including 800Mhz.

I think they are out of Arizona.

815. Re: Need PRO-37 Repair Help

I have a very nice Icom IC-R7000 receiver for sale. Covers 25-2000 mhz, including full 800 mhz. It is mounted in a nice EEB 19 inch rack panel with a speaker.
Has the Icom remote control with it. Also has a Deltacom interface but I have not used it. Has the manual but no box. asking $775 shipped in the lower 48.

May consider trades of scanner/shortwave equipment. Or maybe a Standard 5900 mobile rig. Or maybe a 706?

I have the feeling that the police have placed a hidden "bug" under my bed, although I can't find it. I need a radio capable of picking this bug up, so I can hear what they are hearing.

I make several sounds as I talk and sleep , and need to know what they are so I can be prepared when charges are filed against me. Can a radio Shack Scanner perform this?
Thanks in advance.

Are you using discriminator output ?

If not this is probably the reason for your lack of success.
POCSAG use a lower baudrate than MDT and may in certain cases decode
successfully from tape or loudspeaker output.

MDT is 4800 baud and definately requires a discriminator output to work.

What's this radiorest (sp?) thing I'm hearing about?

Is it on the web? Where?

If it'll hold my scanner holder, I'm VERY interested - I'm tired of knocking over my radio each time I try and use the keypad... :(

Thanks - EARL

Why YES, a Radio Shack Scanner will do this QUITE well, but you will need to buy the most expensive hanheld unit they sell. It is the only one capable of doing what you are asking.

Good Luck!!

839. Re: Pro-37 Questions

Newsgroup: rec.radio.scanner
Date: 1998-04-08 00:00:00 UTC
From: Jason Mahoony <jake@nospam.com>
Message-ID: <352B1712.6409@nospam.com>
Source record: 164398

Thanks everyone for their kind suggestions to remedy my problems with my aging PRO-37 scanner! You guys are a lifesaver.

I made the "mod" by clipping relay/diode D13 and yes I get full 800 MHZ access now. However, if I try to directly enter the numbers numerically from keypad, it will not accept it (Error!). But, I can set "Limit" down from 899MHZ and it searches the entire spectrum of 800-899MHZ. Then, when I get a "hit", I simply press the Monitor key and it stores it in there.

Another problem I had talked about was my (little rubber) keys on the keypad were not "picking up" or actuating. I took it apart and removed the (really weird looking) rubber-key-pad-mat-dealy. Then, I sprayed some solvent onto Q-Tips and wiped the rubber keys deals off well with several moistend Q-Tips. I also wiped the contact board/pad (that the rubber key pad lays on to make contact). Finally, I took a soft eraser and lightly "erased" over the contact board/pad. Then, I put 'er back together --of course forgetting to put in at least one screw, back in.

Also, my PRO-37 "on-off" and combined volume switch shot craps on me. Taking the back off, I could see where (on the volume/on-off switch) it had 2 lower wires which was "the power" line. I went to Radio Shack and bought a small toggle switch (one that had a very small part sticking out in the back, or lower, portion so that it would take up as little room as possible inside the case). Then, I took my DREMEL --a drill would work just as well, but not nearly as much fun-- and cut a hole in right side for the switch. I merely took the two (lower) wires off the OFF/ON switch and ran them to the newly installed switch. Then, put 'er back together.

Now, I have the ON/OFF switch on the side of the scanner. After turning it on, the old volume (and used-to-be-ON/OFF) switch still works fine for volume control.

I would like to replace the stubby (rubber-duck) antenna with an extendable antenna that just screws on (like the present antenna). Anybody have any ideas where I can get one and how much it will cost? Thanks, again!

>
> Frank J. Grimm

You are incorrect in this. Recievers can be detected, the British GPO can detect unlicenced TV Sets, using detection trucks. How much of a signal does a TV reciver put out? As all radio recievers have IF and RF oscillator stages these can be detected. I can pick-up my scanner using my old Hallicrafters S-108 tuned to 21.4 Mhz (the IF frequency harmonic) Up here in Canada, the Police can detect illegal radar detectors using this same principle. Even your PC puts out RF signals, and someone can replicate what you are typing right now if they wanted to.

The key phrase is if they wanted to. I don't know if they could tell if it was a scanner, or just a reciever using an IF of 10.7 Mhz.

843. Q: Scanner birdies...

Newsgroup: rec.radio.scanner
Date: 1998-04-09 00:00:00 UTC
From: Adam Lane <alane@thegrid.net>
Message-ID: <352D5B55.782D@thegrid.net>
Source record: 164102

Here's a question for some "old-timers".

All of my scanners have birdies. Fine; no problem.

I know that digital electronics, such as what's inside my CD player and my SLR camera throw quite an RF field. I don't even try to listen anywhere around my computer when it's on. I can hear my camera's CPU at a distance of 30 feet, for example. How it got FCC certification, I don't know.

My question is...Does an older, analog tuned radio have less birdie frequencies than a new CPU controlled radio? Is the self-inflicted RF interference mainly due to the digital control circuitry?

I imagine that birdies are not an issue on crystal tuned radios, since they don't get much more than a few frequencies.

Where I come from we call gp-300s cheapy-300s, but to answer the question, in some radios there is a ground, which in your case is the ground part of the audio output, just connect an ohm meter to the ground and each of the other pins and see which one has a closed circuit when you ptt and has an open circuit when you release.

You bet. Older analog radios are "clean", and do not have
problems due to funny frequencies given off by digital
multiplication and division of crystal oscillators.

The cleanest radio of all is the very old direct RF tuned radio, before
Major Armstrong developed the Superhet or Regen. Superhets had no
intermediate frequency stage, so each gain stage had to
have RF Tuning. As far as pollution goes, regenerative receivers
can oscillate with too much feedback, and superhets have a local
oscillator.
That is why the "modern" receiver designs were not used during
covert WWII operations- the enemy could sniff out the LO or
oscillations.

853. Pro-90 vs. 535XLT?

Newsgroup: rec.radio.scanner
Date: 1998-04-09 00:00:00 UTC
From: goose@umcc.umcc.umich.edu
Message-ID: <goose.892172298@umcc.umcc.umich.edu>
Source record: 164112

I looked for a FAQ or previous thread that might discuss this but came up empty handed, so here it goes.

I'm out to get a Trunktracker scanner, this will be my only scanner as I'm a mild scanner hobbiest. I've been looking towards the Bearcat 535 but the Pro-90 has caught my eye. From what I can tell they are pretty darn similar, am I right about this? Should I go with one over the other?

Humbly, I ask the masses,
Christopher

If your scanner picked up the bug, you wouldn't have to worry about it.
All that feedback would be quite annoying.

The worst commercial web-site i've seen so far. Even your links to
other companies don't
work. Not that I need to know Uniden's address anyway. A business
should have
a better storefront that _that_.

I don't think i'll drop by, it's not clear what models you sell at all.
Nor prices.

AND TURN THAT CAPS LOCK KEY OFF DAMMIT!

861. Captain Scanner

Newsgroup: rec.radio.scanner
Date: 1998-04-09 00:00:00 UTC
From: Emilio Goldstien <EmilioG@Sofa.net>
Message-ID: <01bd6433$d3cbcb20$c6cde0cf@cuib>
Source record: 164120
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I have come to be called Captain Scanner by the many police officers in my area.
They think of me fondly, as "out of nowhere" I appear at various in-progress crime scenes around my town. Last fall, I found a red cape with the letter "S" emblazoned on it. It has a few rips, but alludes to experience of this old soldier.

I have no agenda, no particular reason for chasing down the events as they occur, just a dedication to being on the scene when something major has happened.

Twice I have been found in the driveway of a home where a hostage situation was in progress. I hoped I could talk the crazy boyfriend from his hideout. Once I was taken down by officers before they realized that it was just good old Captain Scanner on the scene again. I hope that someday I will be able to provide valuable assistance, and each event I attend gives me training I could not get sitting in my one-bedroom apartment placing tiny ads in newspapers across the country.

My name is permanently recorded on the police radio tapes along with some of the biggest crime stories we've seen in the area. And, like the daring soul seeking out a local news reporter during a live interview, then tripping on the sidewalk behind him, I am married forever to the event, and the whole city celebrates my appearance on the scanner radio.

Long live Captain Scanner, and the time-honored ideals he embodies. And long may the hobby of scanning endure. There are criminals in them thar hills, and each victimized man or woman adds pleasure to the scanner lifestyle we live each day for.

Thank you for spending this time with these meaningless pixels.

Bill paid for his mistake, and when was being drunk and disorderly
classed as being on the same scale as killing someone.

Plus when are you and John going to show proof of this supposed warrant,
you post everything else on here , so lets see the proof you have.
You and John are so full of it because you don't have any proof.

As I told John before put up or shut up, same goes for you , if you have
proof post it where all can see this great warrant you have.
The reason you don't is because you don't have one and are just blowing
in the wind like John is.

Also this question was addressed to John and not you, yet you answered
it for him.
Does this mean you and John are one and the same?

If anyone is the neanderthal it is you as you equate a misdemeanor crime
as being the same as killing someone , but then again you and John have
the same thought process and that has never been much to brag about.

As for wasting bandwidth, you and John are doing a good job of that all
by yourselves and there are many people who will agree with me on that.

And there was a time that you thought John was a jerk as the post shows
below.
This was found through a search on Dejanews
I know your going to say someone forged it .

I don't think it matters; they all seem to be using the same chip set.
Mine is from Sanyo. There are others from Lucent and Radio Shack.
Just make sure it says "Spread Spectrum Digital" on the box...

Why does it list mscott@teleport.com as the e-mail contact for Mackey?

Wouldn't that mean that if mscott@teleport.com appeared over and over in a news posting that mscott@teleport.com would start to get lots of spam mail from spambots?

I hope that johnny (aka mscott@teleport.com) knows enough not to use the email address mscott@teleport.com in the newsgroups.

Johnny iza smart buoy.

There are not any freq mods for the 235 as of yet. There are however several other mods for the backlight in this months Monitoring Times (Published by Grove). There is not likely to be any Freq mods because the freqs are in the firmware and it is not possible to reprogram this area w/o alot of work that 99% of people could never even accomplish.

Hi Chris,
Here in the US, Radio Shack discontinued them many moons ago. That means they are priced at clearance level and will stay that way. Good luck finding one!
To anyone interested, I did see one being auctioned on eBay until midnight tonight(Apr. 9)...

Has anyone else noticed how few real posts there would be in this newsgroup without all of the thrust / counterthrust garbage?

891. FreeTracker 2.1 released (BC895 TrunkTracker Software)

Newsgroup: rec.radio.scanner
Date: 1998-04-09 00:00:00 UTC
From: no.spam@for.me
Message-ID: <8AFAC353CEFE391B.167B660F4B62FC0C.A6D743F8C03CF48B@library-proxy.airnews.net>
Source record: 164172
Cross-posted to: rec.radio.scanner,alt.radio.scanner

http://www.AutoWinNet.com/freetrack.html

FreeTracker is a powerful Windows95/NT program for controlling your Bearcat BC895 base scanner. And as the name implies, it's FREE!
To operate it, you need a cable that connects your scanner to a Com port. You can get this cable from a variety of sources, including making it yourself. See the program's documentation for details.

The main features are:

* Supports up to 25,000 "Virtual Channels" which are like the radio's normal channels, but add Callsign, Description, Color (for activity log), Alarm, location, hit count, and more.
VChannels can be scanned for activity, or stored into your BC895

* Descriptions - You can store Descriptions, Callsigns, and Locations for frequencies and Trunk Talkgroups/ID's. When that freq/talkgroup appears, a description is shown, along with Callsign, City/State, etc.

* Alarms - You can assign a Wav file, graphic, .RTF file, speaker beep, or run a script while that freq/group is active. For example, have all local police codes shown during police calls. I just added some Cool bitmaps that appear with local police and fire stations

* Colorful charts and graphs show you what frequencies/talkgroups are most active

* Powerful script language lets you create your own custom scripts, and run when a certain event happens on your scanner.

* PerCon database lookups from their web page (stored as html) can be imported. Also imports from Grove, Probe, and PerCon Dbf files!Drag and Drop channel editing throw any database entry to a channel, or vice versa.
If that frequency is already assigned, it zooms to the channel # to avoid a duplication

* Activity Report is color coded - you can assign any color to any specific freq/talkgroup

* Search Ranges - you can store up to 2,000 search ranges, then double-click them to activate an immediate search of that frequency range

* All BC895 keys are supported, allowing a virtual radio on your desktop

* FreeTracker can be minimized as a TrayIcon, with a feature-rich right-click menu for easy access to popular functions

* Database-editing in a simple grid. Click the record you want, and change any value

* Communicate with your radio interactively - type any command in, and see the response.

* Power users can utilize the quick-command box. Simply key in a command word to change frequencies, channels, scan, hold, search, manual, etc.

Example Syntax:
f15189 tunes radio into frequency 151.890
c56 takes scanner to channel 56
Up arrow emulates SCAN key
Down arrow = Manual
Right arrow = Search
Left arrow = Hold
... plus about 50 more powerful commands

* Export all scanner channels/freqs to a text file or Dbase, then import back into the scanner at a later date.

* Complete logging to a file, or printing just about anything.

* Export your VChannel/talkgroup database to a HTML file for posting on your favorite web page.

* Multiple copies can be run for multiple BC895 scanners

892. Where do my questions go ?

Newsgroup: rec.radio.scanner
Date: 1998-04-09 00:00:00 UTC
From: Dennis Wenger <Dwenger@worldnet.att.net>
Message-ID: <6gj1os$bdk@bgtnsc02.worldnet.att.net>
Source record: 164173

I've posted a few questions that I know went out, because I received responses via e-mail, but they never
get posted on the Newsgroup so that I might see what anyone else's thought on them are.
Where do they go ? Do they get lumped into the Cheek Vs Mackey crap that goes on here and subsequently spun off into the Netherworld of cancellation ?
I am, and have been, a fan of Bill Cheeks for years, since the late 70's. Never heard of no Mackey.

I have several modems, myself. Just not sure of the hookup.

Would it be like this?

Sine gen. --> xfmr ---------- xfmr <-- inverted audio
\ /
\ /
\ /
output

Where would the diodes go?

I'll check some books at home tonight

I think you are trying to draw a double side-band generator. You'll
still have to filter out one half of the output.

There are IC chips that will do this much easier!

Let me know if you want more information.

Put your stereo under your bed, and play Axl Rose music(?) at full blast!!
That should stop anyone from eavesdropping. Then line a baseball cap with
aluminium foil so they can't monitor your brainwaves! (they'll need a
supersensitive reciever for that!!!) But the Axl Rose at 120 dB, will
do the trick.

;-)

Here is an excerpt from a FAQ I read...
----------START---------

I'M RECEIVING, BUT I'M ALSO TRANSMITTING....SAY WHAT!
You don't have to have vast experience of TEMPEST and the like, to know
that any piece of equipment that is turned on and uses crystal
controlled or ceramically resonated circuits, generates spurious output.

Put an antenna on to this piece of supposedly dormant equipment, and you

now have unwanted radiations, in effect when your radio or scanner is
switched on and connected to an antenna, you are constantly transmitting

a signal, small it may be, but it is there! And if an amateur like me
can receive them at up to 50 feet, then how far can the pro's get!
'BULLSHIT' you say!

EVERYONE!!!!!!!

There is a new URL for the W5GB homepage, it is now at:
http://telsat.nmsu.edu/w5gb/

KC5KTO's page is improperly linked here, due to some server changes and
I have been unable to locate were his files ended up. If I find out I
will post the new URL.

Better than new Uniden Sportcat 150 Yellow, 100 preset
800MHz-capable handheld scanner.

With Nicads, Charger, Rubber Duck Antenna, Box,
Manuals and Freq Guide book. Basically everything
that came with it and virtually unused.

Plus, it has a handy discriminator output jack
installed neatly on the back panel for use with
PD204 POCSAG Decoder.

Willing to trade for an 800MHz-capable base or mobile unit.
(eg. RS Pro2022, Pro2026, Pro2038 or similar).

Make me an offer.

You better like it, because the alternatives you mentioned
are the extent of your viable options.

Mr.Cheek CLEARLY stated that YES, he HAD been >arrested...MANY YEARS AGO....

Really, I have been taking the advice of some of the wiser of the group, and if I don't LIKE what a person has to say, I don't bother READING it. SO, when it comes to the Cheekster.....

I'll just have to check it out.

My question then, since BillyBoy sees fit to 'confess' is just WHAT WERE you arrested for BillyBoy, was it that sick stuff someone was taliking about, something about enticing little boys into your car, <and then yankin' yer' gank in front of them> or was that some OTHER Bill Cheek?

And if so, what does "a LONG TIME AGO" have to do with it, once a sick F***, ALWAYS a sick f***,

ESPECIALLY for someone as HIGH and MIGHTY as old BillyBoy (ButtCheeks for those who may be confused)

Don't know 'bout any of you, but this Genl'man has NEVER been arrested. I may be a foul mouthed, crotchety ol' cuss, but I follow the law. 'lessin yer' talkin ' wtih that whiner GeoVet, who cried somethin' bout "unsolicited" mail. Funny thing is, an old coot like that ALWAYS gets a bunch of that out to the postbox, where does he WHINE 'bout THAT?!?!

Are you sure that MDT works with COM3? I remember that the original only worked with COM1 and I had to recompile it for Com2. Maybe the SW wasn't fully tested for COM3 or you may have a different IRQ setting. Just a thought.

I got some connections in Rogue River and Medford and over on the
coast that I been promising to look up. Perhaps I could arrange a
trip to coincide with your itinerary. Mackey suggests that I bring a
friend or my lunch to the hamfest. Does he mean that there won't
be any food available there?

Try the ARRL antenna hand book (I have the 15th edition) and look up
TURNSTILE ANTENNA (page 19-8). This is easily scaled for 137Mhz, infact
building it for 146 would work just as well.

Good luck

Not even close. The new image rejection specs(60dB) make those annoying
creatures a thing of the past.

A great radio and even better at that kind of price. Highly recommened.
Read my First Impressions of it at http://www.qsl.net/n2mca/BC895.HTM
as well as my review in the coming April issue of Scanning USA.

Happy reading and best of luck with your decision!

hey everyone... this message is for people liveing in the lower mainland of British Clolumbia...does anyone have ALL the frequencies for the Vancouver Fire Department? this list must have Fire Tact 4... I missed all the cool stuff when Hazmat 17 had to burn off the natural gas from that cab this week... also when the VPD switches over to the wide area radio system will i be able to listen to there new style MDTs? I know that the current version MDT1234 is written for 4800 or 9600 i cant remember baud and our VPD runs at a slower speed is it possible for me to try and re program the C code to make it run at the current speed? could any one tell me the current speed so i know what to shoot for? thanks... please respond via NewsGroup post rather than e-mail so we all can work on this problem... thank you.

If your main interest is in one band, you can build a simple dipole or a groundplane. A dipole consists of 2 elements, usually of equal length. For the 154-158 Mhz band, the total length would be about 18 inches, each part of the dipole being 9 inches. Solder one of the wires to the center conductor and the other to the shield of the coax. This will work as well as any commercial antenna using a similar design, such as a whip antenna. Cost has little to do with performance. Generally, more expensive antennas will be constructed of better materials, and ones designed for car use have a magnet-mount or glass suction base. Amateur antennas designed for the 2 meter band (144-148 Mhz) are cheaper than similar commercial antennas.

Sound advice from an intelligent individual. If your phone is on, it can be cloned. If you only turn it on to make calls, it can only be cloned during the time it's turned on. The users of cellular phones need to educate themselves to understand that they're really only using two-way radio, and their signals can be intercepted.

Not true! Quarter wave VHF/UHF antennas are easily made out of scrap
materials and cost next to nothing! Try welding rods, braising rods
(better), wire coat hangers etc.
Give it a go!

I agree, the page says you stock scanners and acressories but gives no mention to what kind!!! Also, the graphics on the bottom of the page that are supposed to link to uniden and cobra don't even have a link installed to take you there, yet they are "Links to Manufacturers". I hope thats just a rough starting point to your webpage because if you hope to conduct business over the internet, then that page certainly won't help you. Not trying to sound harsh, just trying to offers some advice.

Thanks for your interest. The answer to the first question as read off of the manual the freq range covers 25-520mhz, 760-823.945mhz, 851-868.945mhz, 896-1300mhz. The cell mod was done to recover the freq gaps of 824-581mhz and 869-896mhz. Total coverage. You can program and scan 400 different channels. From what I have heard it is a very good radio. I bought it just to say I had one, I never really used it to its full functions. A hobby for cordless and celluar phones mainly. It was fun but I moved on to big computers... The optoscan 456 computer interface board is installed in the unit and works quite well. I scanned a picture of the introduction to the opto456 manual. It covers what all the opto can do. The version of the scancat-gold software is 6.0. I have all the manual's , boxes, paperwork and invoice's as well. The radio does not have as much as a scratch on it. I keep all of my radio equipment in a foam padded hard case. I have invested over $700 in this equipment and it is in new condition, But I am willing to take $500 flat for all. If you are interested or have any questions let me know by email and we'll make arrangements to exchange phone numbers.
Thanks again,
Gene

>John got the IDP (Internet Death Penalty."

You just don't get it, do you? John only bothers folks who enjoy being bothered. He doesn't bother me at all, since I pay no attention to most of what he says. In fact, he's an asset to my reading this newsgroup, since I routinely killfile almost everyone who flames him. This cuts down on the no-content noise about 90 percent. In fact, I thought I had you in the ol' Twit Filter, but I must have relented, or else you changed your ID somewhere along the line.

Complaining to ISPs for one's own lack of self-control is a pretty pathetic tactic, IMO. It's way too easy for such tactics to backfire on you.

: I have a new FT-50, and tried both of the mods out there, i came up with
: 60-999Mhz no holes at all, don't ask me how I did it... I dont remember,
: sorry...

A question:what are the first 2 characters of your unit's serial #?
Generally, units with a number below 7L will mod fully.
For example, I have a 50, and the serial # starts with a 6M-it modded
perfectly(band-free mode).

I think your first move would be to take those two wires back off and see if it is OK then. If it is, you'll have to isolate your pickyp line with capacitors, or connect it somewhere else. Do you have the manual? It might be useful in choosing a spot to tap in....

and read. There are all sorts of ways around the blocking.

The cellular providers do not want to upgrade so that their signals
are encrypted. So the bullshit about privacy. Anytime you broadcast
a radio signal, it is not private!!!!

Right now there are companies that sell to law enforcement agencies
equipment that is designed to follow CelTel conversations. Fits into
a briefcase with recorder. Don't even begin to ask about the military's
ability to intercept signals.

You have civilians, on a budget, able to not only intercept the
conversations by get the ESN and clone it to anyone CelTel. They
just broke up a ring in Indy. Forget private. And the law is a
joke.

988. DIRECTION FINDING?

Hey all -- does anyone know of a way I could use my handheld scanner
as a direction finding device? Ive found some strange data signals
on 160.035mhz and Ive found that when I point the radio in one direction
or another the signal fades a little -- I kinda wanted to know where
this signal was comin' from. Maybe something I could do to my radio ....

Thanx in advance!

Actually, it wasn't much of a mistake. I
was jailed for my own safekeeping more than
anything else. Or maybe for the safekeeping
of a certain group of foreign nationals whose
lives and limbs were at stake. The provost
thought I was the one needing protection, but
that was just a matter of opinion.

> Plus when are you and John going to show proof of this supposed warrant,
> you post everything else on here , so lets see the proof you have.
> You and John are so full of it because you don't have any proof.

So far as I know, I've never had a warrant out
on me. These imbeciles will do anything to
further their own ends, though. But who cares?
I don't. In fact......I'd like to see the snotwads
post something of tangible evidence.

Oblahdee Fada wrote me a threatening email last
week....insinuating he was going to post the
evidence. I hope the nincompoop does......

> The reason you don't is because you don't have one and are just blowing
> in the wind like John is.

Well, that is a nice way of putting it, but it
really ain't "wind" they're blowing.... not in
any conventional sense of the term, anyway.

> Also this question was addressed to John and not you, yet you answered
> it for him. Does this mean you and John are one and the same?

OBFD and Smacksie are kind of joined at the hip,
in a manner of speaking. The only way you can
separate them is with a crowbar.

Tsk.....tsk....tsk.......

997. Re: John Mackey Afraid of His Lies

I don't think they have the balls between them to post any evidence to back their claims, in fact as far as I can tell neither one has made any true statements, otherwise they would have posted the proof for all to see.

As for Oblahdee Fada , he can't make up his mind about whether he likes Mackey or not , he makes a post against Mackey and next thing you know he can't do enough to protect Mackey.

As you say Bill it appears they are really inseparable, that is why I asked if they were the one and the same.
It is kind of strange that obfd answers Mackey's email for him, must be maternal instict, she doesn't want to see her little baby's feelings get hurt.

It must be a sight when obfd puts Mackey on her shoulder to burp him, wonder if she sings him a lullaby at night so he can fall asleep.

Mackey only bothers me when he forges cancels to my posts.
May I assume you condone such behavior? IMO, it's way too
easy for such tactics to backfire on you, which is exactly what
happened to Mackey. Observe the post pasted below (origin-
ally posted by John Ingram) if you haven't already read it.

Mackey had forge canceled some of Ingram's posts and forgot
to change his identity information in Netscape back before e-mailing
one of his buddies. The e-mail bounced back to Ingram.

I'm wondering what's the best approach to hunting down PL tones. Is it best to sit on each PL setting for awhile? I've got a conflict between a local PD and a local ambulance.

Before I waste time, is there a basic strategy?

Take it easy,

Andy

You can download the software on the net and make a cable for under $10

http://www.access.digex.net/~kplotkin/scanner.htm

This is one of many sites that offer software. Try using a search
engine for Pro-64

RE: Best scanner-trunk.

I have used scanners professionaly for 9 years now and only until recetly did I find a scanner that I can truly call "the best scanner" it is the "TRUNK TRACKER". I have a hand held and a base mobile with tonw board. In conventional mode these are awesome radios, excellent sensitivity and selectivity, I drive through pager and intermod infested downtown Toronto and rarley hear any crap. If you live in an area that has motorola trunk then the truck tracker will be even more usefull to you. Well worth the money.!!!!

>just broke up a ring in Indy. Forget private. And the law is a
>joke.

The law against listening to cell phone conversations was designed to placate folks into using cell phones, to prop up the fledgling cell industry. It's pretty much an easily violated law. When I took a computer crime investigations class, we also looked at financial transaction card fraud and cell phone fraud techniques. It's very, very easy to use easily purchased equipment to locate and record cell phone ESN and MSN information and use it to clone new phones. (Cloning is where a phone is programmed with the Electronic Serial Number and phone number of an existing phone account... calls made with that phone are billed to the existing, legitimate phone's user) Our instructor demonstrated such a device during the class; we saw at least three different ESN's pass by on the nearby interstate in three minutes.

Usually, cloning rings are easy to identify by virtue of the fact that they scam their ESN's from one area. Recently, they've been known to pay long-haul truckers to carry the ESN readers, with 99-number memories, on their rigs; so they can gather ESN's from around the country.

Digital phone services were thought to be an answer to preventing casual scanners from intercepting conversations, but not long after they were introoduced, someone worked out an easy method for intercepting them as well. Encryption methods might last longer, but many carriers are reluctant to incur the extra cost of implementing them. In areas where encryption is available, however, cell phone fraud has dropped dramatically.

If you want to reduce the chances that your phone's ESN is intercepted and used, carry a phone and a beeper. If someone needs you, they beep you and leave their number, you call them then. Otherwise, leave the phone off... as long as it's on and polling cell sites, even if you're not actively talking on it, it's broadcasting ESN information. Also,

if it's really so secret that you can't risk someone overhearing it...
don't talk about it on a cell phone; even a digital one.

I have use scanners professionaly for 9 years and in Toronto Canada we have vhf/ufh/trunking for our emergency services. Now until the trunk tracker came out I wa always envious of people who used commercial two-ways as scanners, now that the truck tracker is here and I own both the handheld and the mobile with ctcss board I can say that it is probably not such a good idea to go with two-ways. most two-ways have to be programmed by computer, if you suddenly need to input a new freq, it's not as easy. The reciever quality on the trunk tracker in both conventional mode and trunking mode it just great and driving through pager and intermod infested Toronto I very rarly hear any crap. Well woth the money.

I am not familiar with that particular model of scanner, but I can tell you that if you live downtown in a big city you can run the risk of de-sensitizing your scanner by putting on a really good antenna especially in the 800 mhz range, So if you go ahead and try it be prepare for the same crappy reception as you have now, it's definalty worth a try and depending on the quality of the scanner's receiver it might work well. When I was learning I went through several antenas in a frustrated bid to improve reception only to find out my antennas were too good!!! . I now use trunk tracker scanners and don't have such problems any more.

> Like call a group district 1 or anything?

I do not really understnd your question too well, btu in motorola trunk system most groups or talkgroups as they are properly know have names or numbers, if your trunktracker shows you a talkgroup of 144 you may to listen for a while to figure out what channel it is , if you know someone in that company or service maybe they can tell you, also if you are scanning all the channels and someone says "go to Tac 7" then watch which talkgroup come up when they swtich, then you have the name.

I own and operate two trunk trackers for professional use and what may be happening is that you are going out of range of the data channel or you are being hit by inteference so strong in your area that the scanner can recieve properly, remember that there can;'t be any static with data. Also check and make sure you ahve all the frequencies for the trunk system you are trying to listen to, if they have added one or you have missed one and that freq, happens to be one of the data channels then no wonder your trunk tracker won't track. You say it comes back the next day and that leads me to belive this might be your problem as most motorola sytems alternate their data channels on a 24 hour basis. Another thing you could do is completely reset the radio. (Write down all your freq. and talkgroup information before you do this as the radio will be completly empty) To reset the radio 1) turn it off. 2) pres and hold down the manual, 2, 9 keys. 3) with your third hand turn the radio on while still holding the keys down and wait for 000000.00000 to appear. 4) start reprogramming the radio all over again. Check your antenna conneection as well sometimes a simple thing like an improperly installed BNC connector can give you problems. I've seen the pro's make all those mistakes but because they are pro's they will never check the simplest of things.

NiMH batteries to be used coerectly need a different charger than NiCads do, They are much more easely damaged by overcharging. Also regular nicads witch are said to have a memory, do not, people say they have a memory becouse of loss of usage time -right- well, you should not let nicads fully run out before recharging them, let them go down about to 1/5 of full charge or their about since it is hard to tell, everytime you let them fully discharge the cells lessen their capacity. I have had the same nicads in my scanner for 4 1/2 years and i use it everyday at work.

No the trunktracker will only track on 800 mhz motorola trunking
systems. It sure would be nice if it tracked on 900 mhz and G.E.
systems, but maybe they will leave those goodies for future editions,
after all Bearcat wants us to buy scanners and lots of em !!!

I was given a nice hand held scanner as a gift but I only have the little pull up antenna for it I was wondering if anyone has an antenna that they are not using or just dont want any more. The kind I am asking about would be one that can be mounted on the outside of our house, maybe at the roof edge. I dont want a big one, I just want one that will work good.

If you have one around please email me and tell ok, email at: shpamc@aol.com

Thank you very much.

If you go to radio shack and buy on optimus satalite system, and put the dish
under the bed, you will recieve specific harmonic frequencies that the Police
International Secret Snooping Mechanical, Electrical Optical & Other Firmware
Agency (PissMeOff Inc) use to investigate you. I know this because I used
to fly Black Helicopters over your dwelling, and there are significant out of
band harmonic emissions that occour during night time manuvers (nocturnal
emissions). If you are concerned, however, you might say something that would
cause you to become " compromised" I suggest the following piece of tradecraft.
Each night before going to sleep, ball up one of your socks, stuff it in your
mouth, then get one of those spring type clothspins and put it over your nose,
then wrap your whole head in several layerrs of duct tape.

problem solved

Also the TT's will only work in either conventional or trunked mode at one
time. You cannot liten to both at once.

It would be interesting to see how this done. I have heard
about cloning CelTels but never have I seen it done. Also
I am interested in were to buy the equipment.

The reason for wanting to know more is simple. I doing computer
security it helps knowing how to hack, how create viruses. You
can not defend against an attack if you do not know how the attack
is accomplished. I know how to write viruses, how to hack into a
system. I now need to learn the CelTel fraud is done.

And Ken Bickel <ac4vv@megsinet.net> responded:
>
>I've been a ham for over 20 years and I have YET to go on a hidden
>receiver hunt!

First off, he said "amateur", not "Amateur Radio Operator". Second off, he clearly pointed out that he doesn't hunt for receivers, but rather "unintentional radiators." (You probably couldn't DF a crystal radio receiver) Thirdly, if you haven't tried to DF any hidden receiver causing unintentional radiation in over 20 years of being a ham, then either you live in a radiation clean area, or you just don't care to find out what is interfering with your communications.

In my first year of being a ham (about 10 years ago), I DF'd my own packet TNC, a neighbor's baby monitor... and won first place in an amateur radio club rabbit hunt. (All using an Icom 2AT with an antenna of my own design)

Since then, on numerous occasions, I have DF'd TV's, computers, and unstable free-running TTL circuitry. Here's one for you to try at home... tune a portable transistor radio to a station above 1200 KC and have a friend hide it from you (leaving it on... disconnect the speaker or turn the volume to zero) Take another portable transistor radio and tune it about 655 KC lower (you might want to tune it before your friend hides the other one)... Now go and DF the receiver.

Now you can say "After 20 years of being a ham, I have finally taken part in a hidden receiver hunt."

Put in the frequences that the radio transmits on
would be the repeter in freq.
also enter all known car to car freqs.
AND if used vehicular extender freqs. such as:
Maryland State Police uses: 155.370
Virginia State Police uses: 458.350
Florida State Police uses: 465.1625
I lived in Sarasota Co. Florida in 1990, in my car with a roof mount
antenna I'ed get about 1 to1.5 miles range from a state police car near
by, Maryland about 5 miles range.

Mike,
If you hunt around in ham radio areas, possibly adding the keyword "foxhunt" you should find some simple designs for making a directional loop for VHF and using it.... Just make it about 10% smaller than one drawn for 144 MHZ ham bands.
Depending on the polarity of the signal, "pointing" the scanner with a vertical whip can be very misleading. I used to put tiny FM wireless mikes in model rockets so I could find them & learned you need at least a simple shielded loop to do much good.

jblock,
I'd say any handheld scanner with a warranty on it for $50 would be a good place to start! You can always sell it for a good portion of what you paid if you feel you need more features or just keep it for emergencies or portable use if you decide you need a top notch base scanner. For $50, if you only use it as a weather radio, it is well worth it! You can learn a lot about scanning without risking much. If you buy a big expensive unit to start, you will lose a lot more if you decide to sell, and the complicated unit might just confuse you & turn you off. I've bought many nice scanners cheap from people who would have been better off with a basic one to start. Learn the buzzwords, spend some time and money on the web & books and magazines and use the basic unit to learn how well you like the hobby.
I used to sell them, and beginners seldom brought back the basic ones, but if they insisted on a 300 channel top of the line radio to start, half of them were returned. My 2cents. Good luck!

TrunkTrac(r) will now track VHF/UHF/FED SMR systems, this includes the 500 MHz T-band. This capability has just been added. FED SMR trunked systems operating within the 4 federally allocated trunking groups are handled just like an 800/900 trunked system; you only need to enter the repeater output frequencies.

You can get more info on TrunkTrac at the Scanner Master web site: www.scannermaster.com Lots of people have complained that the site had no information on TrunkTrac. This problem was do to a cross listed URL and has now been fixed. You can see the hardware, view numerous screen shots, and read the User Manual online.

Note that the information regarding VHF/UHF/FED SMR trunking has not yet been added to the site. But will be soon.

I have several B&W CCD cameras for sale.

These units are about 1" x 1", mounted on a PC board. They have a nice 3.6 mm glass lens, and have 6 infared LEDS for low-level viewing.

These units work well, and only need 12 VDC @ 100 ma to operate.

JPEG available upon request.

$90 shipped CONUS (these same cameras are $115+ at Fry's)

Well,

the key word to look for direction finding is:-

DOPPLER DF

You can see them on the top of police acrs with four small antennas
Thos are Doppler DF anterns, and all it takes is those set of antennas
and a small PIN Diode switch box to DF

I would like to trade the pentium laptop below for either a R7000 or R7100 or a AR3000. Anyone interested?

Ham gear is another possible trade

Arm 5400PT
120 Mhz Pentium
16 MB RAM
4X CD ROM built in
800 MB HD
1.44 MB Floppy built in
Touch Pad and Game Pad built in
2 MB video RAM
10.4 " DS display (800x600)
16 bit sound (ESS 1688)
Stereo speakers built in
3COM 3C589B Combo network card
Megahertz XJ2288 28.8 modem
PS/2 Microsoft mouse
Carrying case

Excellent condition

Rory,

The PRO-2041 is the base version of the PRO-64 handheld so what
works for one, works for the other. Neither can be modified to
receive the cellular bands but there are other things that can be done
to them. One of the easiest is to make a cable to interface the
scanner to a PC. Check out Ken's Radio Scanner Page at:

I've been using AA NiMH batteries for the past 2 years in my 3
portables. The big advantage is they last twice as long as NiCads, and
technically don't suffer from memory, however you're still best to
discharge them as often as possible before recharging them.

My only advice is to go and buy a decent charger. I have one here that
monitors the + and - Delta that fast charges the batteries, you'll
quite easily stuff NiMH batteries easier than NiCads if you overcharge
them regularly.

1064. Old RS Pro-7B Questions - Anyone Had One Of These?

Newsgroup: rec.radio.scanner
Date: 1998-04-10 00:00:00 UTC
From: Gary_Jacek@bc.sympatico.ca
Message-ID: <6gm30v$a55$1@news.bctel.net>
Source record: 164089
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I was looking at an old RS Pro-7B 20-173 Mobile Crystal Scanner.
The Date code is 10A6 (1986? 1976?) and the vendor wants
$10US for it. Anyone got any experience/comments they
would like to share about this rig? There is no manual
with it, so some operation tips would be welcomed. A photocopy
of the manual would be even better.

There is no listing for a 20-173 at the Tandy web site.
Is this rig a rebadge of another scanner?

The plate on the back lists 148-174MHz as the frequency
range, but the 8 crystals inside range from
142.035MHz to 143.775. Is this going to work very well?

I planned to install a BNC connector and run it off
an outside antenna. What impedence should the antenna
feed be?

The crystals in the radio match a couple of my
local police agencies perfectly, so it could make
a nice dedicated police monitor when my 2006 and 2022
are busy doing other things.

The local public safety/police will soon be going to
800MHz digital as part of the WARS project. Unless
the police go simulcast, I can expect about one year
before this $10 receiver becomes a conversation piece.
But it does have some really nice blinkenlights!

be careful about law involving interference and such. NY has a scanner law that making it illegal to have a scanner in the car. I guess the state you living does not have a scanner law. give these guys the room they need to do thier jobs and keep out of the way! Help can be afforded in many way to these officers. but being under foot is not the way to do it. Ways that may help... lots. you may notice a suspect fleeing the scene. You may keep others from dangers way... crowd control. it is people like captain scanner who the scanner laws are after those who can't keep out of harms way and obstruct justice and interfere with police operations.

Message-ID: <6gjqjt$mtp@bgtnsc03.worldnet.att.net>
Source record: 164128

Can anyone tell me the key combination to hold down when I power up my BC200XLT to reset the unit? I recall two or three keys were to be held down and then turn on the power would erase all the entries/memory and reset a unit in a locked condition.

Thanks,

Rick Duncan

While scanning around with my base scanner today (a pro-2036), I came across some active DEA frequencies from Detroit. Out of curiosity, I punched them into my HS200 handheld...and wow! I was receiving them pretty clearly, indoors, on the stock rubber ducky! The active channels were registering about 2 bars on the S meter.

The reason I find this rather cool is due to the fact that I live in Chatham Ontario, Canada.....a solid 70 miles from Detroit. This little handheld never ceases to amaze me!

Can anyone tell me if the 10 channel version of the BC60xlt sold in
Australia is being phased out for the 30 ch version.

Does anyone know how much the 30 ch one will be/is?

Also needed is anyone who can provide me with the Discriminator chip
ID and location in these units.
Could you please e-mail me with reply.

Thanks very much for any help

David

This doesn't suprise me, since they use a repeater network.....much of their work in Detroit is in the outskirts of Oakland County at times...and they would need that range there.
I'm suprised they didn't have the encryption on, I imagine you weren't hearing too sensitive of material.

I don't know if this is any help, but MEDIA ONE in the northern Illinois area
is being bought out by TCI Cable. There are eleven consortiums that are being
swapped with 11 in Florida.

As I recall, they are using an 800 Mhz SMR, so unless you have all the
talkgroups and know what freqs they're on, it would be futile effort.

>just figure out which of those terminals is positive and which is negative...

Naw. the easiest way to do this would be to open the battery pack, and
replace the old cells. Did it come with it's charger?...
It requires 12volts input, with the tip of the plug being positive (+)
I replaced my cells awhile ago, and the results were great.
Just make sure you buy the Ni-cads with the solder tabs on them, and
observe polarity while connecting them....by not destroying the pack
in there, you can get a good idea of how the new pack should go
together.
As far as the little circuit board, if you find a 12 volt DC supply
like I mentioned above, and connect it correctly, the red light should
come on on the pack, and the radio should operate.
If not, something is a miss.....
If someone mis-connected voltage to it with reversed polarity, you may
find the diode near the plug on the circuit board has been damaged.
Good luck....and good scanning.

You may want to contact the Cellular Telecommunications Industry
Association, CTIA, at:

CTIA
1250 Connecticut Ave, NW
Suite 200
Washington, DC 20036
(202) 785-0081

The guy who taught the cell-fraud portion of our class was from MCI,
but GTE probably has some folks working on it as well.

As for the equipment... I've got a "Specialized Equipment" company
catalog that has ESN readers in its product line. SE sells phone
company and network testing and repair equipment.

I've looking for anyone else in the Augusta, GA area who's using a TrunkTracker to listen to the Augusta/Richmond County system. I've got info on quite a few of the talkgroups -- it would be convenient to compare notes and see if anyone else out there needs info or has some that I don't have yet.

Does anyone have any info on Chicago Police Dept. "10-Codes?"

I'd appreciate any information on these codes.

If you have any Idaho (especially in the Pocatello, Id area) frequencies, or any National Frequencies, that broadcast all over the U.S. will you please pass them on. I do have Police Call, so I have everything listed in there, but I'm sure there are some they missed!
Thanks,
Jon 8891@ida.net

I need to use a 4:1 balun for an antenna I'm building. Would ones designed for TV use work well, or do those units have high losses?

Terrance Brennan of Florence Ma. invented the chip, I had him install two, one on the Pro 43 and one on the pro 2046. there is no reduction in preformance. I found the 43 to be much more compatable with listening to the Erickson system in Worcester Ma. Between the chip and the filters in the 43, almost no noise is heard (Secure static, mdt and other noise) the 2046 really bites at filtering out noise.

contact Terry through ScannerMaster in Newton Mass. They have an 800 number, but off hand I don't know what it is.

Good Luck

1111. pocsag decoder

Newsgroup: rec.radio.scanner
Date: 1998-04-11 00:00:00 UTC
From: Computer Lab User <no_email_set@uets.gsu.edu>
Message-ID: <352FA529.6FF2@uets.gsu.edu>

```
/* POCSAG v1.0

Only good fortune can come where there is a dialogue like this: rooting
out the nebulous digital radio world with this exchange of decoding
software. We're happy that much has taken off since the first mdt post.
Indeed the trunker program has had revision after revision. It's just
surprising that pocsag has not been added to this dialogue. So we
Uberhackers, tired of all the free sex you can get at up-to-4am bars,
decided to solve this trivial task. If nothing but to put together
something simple for people, who will more than not know how to use it
and
what to expect - no ungodly baud rate requirements that even a
discriminator tap can't make out, on account of that lousy ceramic
filter in the path.

Hopefully this dialogue will not stop. If not for us but for the
the pigs that think that threatening to a exploit a real old bug in
unix is equivalent to bringing down the national phone system. These
pigs were nothing but bullies in high school and neodracofascists now.

Anyway here are some guidelines we hope others who put together software
will consider:
1) Use C, not C++, for the decoding code. (Use C++ for gui if you
must;
and abstract the decoding part from it, ie. practice OOPS not C++)
2) Provide a batch facility in the code. Some people don't want to
dedicate another screen besides the computer needed for the decoding
task. Some people would like to do this:
C\> pocsag > com1:
And get the results piped into their linux box.
3) Try to be as library conscious as possible. We have tried to
compartmentalize a lot of our code ourselves.

implementation
--------------

Since this is an experimental exercise, we don't profess to know the
pocsag protocol. We worked from the typical fair of documents that
describe the pocsag standard around the web. So we will just describe
what we gleamed from our implementation:

First there is a preamble of 10101010.... which seems to always be
at least 512 bits long. Next is the sync 32-bit codeword 7cd215d8. The
msb (bit) of which is transmitted first. (Don't worry there is no byte
endian-ness of this codeword, just a straight 32-bit binary value).
In combination the result seems to be ...aaaa....aaaa7cd215d8, that is
```

the preamble ends on a zero, then comes the sync codeword.
After the sync, then comes sixteen more 32-bit codewords (msb first).
These are the content codewords. This sync + 16 codewords is called
a batch. But the transmission need not stop here. Immediately after
the
sixteenth codeword, the sync codeword can be transmitted, thus
indicating
that another 16 content codewords are to be transmitted. And rinse,
repeat.

So the question is: is there a "stop" codeword to end this endless
sequence of batches? We came to the conclusion that there is no "stop"
codeword. You cannot even conclude that a batch ends with the dropping
of
the carrier either. The paging channel is just as likely to immediately
start transmitting a preamble again to start a new batch. This preamble,
and thus the forthcoming batch, is usually at a slower bit rate.

Eventually the carrier is dropped, soon to be replaced with another
batch of batches. However every so often the paging channel has fits of
spewing data, then dropping carrier, sending more data, dropping
carrier,
and so on. All without the universal constant of a preamble. Though
sometimes we do get a preamble, but the sync codeword is
unrecognizable.
Bad bit level decode or government plot? (And it's not the top of the
hour morse code id - ok?)

Back to the codewords. Each of the sixteen content codewords sent
can be classified either as a message codeword or an address codeword
or the idle codeword. The idle codeword has the value 7a89c197.
Each codeword has the same familiar format, the first 21 bits contain
the data, the next 10 bits contains the BCH error correcting code.
The last bit (ie. the lsb) of the codeword is just a parity bit of the
prior 31 bits of the codeword. This data + BCH ecc + parity format is
even enforced in the idle and sync codewords: in other words, if the
first
21 bits were extracted from either the idle or sync codewords, and from
that the BCH and parity were recreated, then the resulting 32-bit
codeword
would be the same as the original.

The msb of a codeword indicates whether it is a message codeword (msb=1)
or address codeword (msb=0). A paging message is started when an
address codeword is first recognized. The paging message content for
that
address is in the forthcoming transmitted codewords, which should be
message codewords. A paging message is terminated when either an idle
codeword or another address codeword is received.

Each paging message has an address, this is derived by taking the
last 20 bits from the 21 data bits of the previously transmitted

address codeword, and extracting the 18 most significant bits from it.
These 18 bits form the most significant bits of a 21 bit pager address.
The lower significant 3 bits are derived from the frame number in which
the address codeword was transmitted in. (The frame number is found
by determining the number of frames transmitted after the last
sync codeword. A frame consists of two consecutive content codewords.
Thus there are 8 frames in a batch, not including the sync)
The remaining two bits in the 21 data bits of the codeword are the
source identification bits. They indicate the format of the page - if
it is ascii or bcd or something else.

Like the address codeword, the last 20 data bits of the message codeword
contain the pager message itself. Any additional message codewords
append
their 20 bits of data to the end of this message. The end result can
then
be deciphered. For an ascii message, every seven bits is a new ascii
value.
Ascii values are printed in the order that they were transmitted. The
same could be said for a numeric message - every four bits is a new bcd
value
to be displayed in the order they were transmitted.

While bcd characters are straight forward - the msb is the first
bit transmitted of the four bit bcd value - ascii characters are more
complicated. For ascii characters, the seven bit value is encoded in
reverse order, ie. the lsb is the first transmitted of the 7-bit ascii
value, the msb the last.

hardware

It's the ubiquitous opamp comparator attached to the discriminator
of your scanner. There is one observation we wish to make:
since the discriminator on our scanner was of the quadrature
discriminator
variety, noise that seemingly was at the discriminator output was indeed
not that. Rather it was simply mixer products from doing quadrature
demodulation at 455khz. We cleaned up this "noise" quite well by
simply adding a RC lowpass filter ahead of the opamp. Here is our
setup:

```
discriminator >---/\/\/\----o--------> to opamp input
100k |
======= 100pf
|
gnd

|\ +12v
low pass >------------------|-\|
| | \ TL084
1 meg \ | /---------------------- Data Out
```

```
/ -----|+/| CTS (pin 5/8)
\ | |/-12v or DSR (pin 6/6)
| v GND ------ GND (pin 7/5)
gnd 12v -\/\/\/- 0v (25 pin/9
pin)
100k
operation
---------
```

This program will attempt to correct any errors detected in message or address codewords. The pocsag ecc mechanism can correct one and two bit errors in a codeword. However since it is difficult to be sure of the exact count of bit errors above one, this program marks any codeword with more than one error as in error. (Though if the BCH algorithm believes,
correctly or not, that the codeword only has two errors, this program will still correct it).

Specific options:
-i will invert the incoming data, so if you decided to be creative and now your opamp won't decode, invert!
-h show help
-n instead of decoding everything as ascii, decode everything as bcd, in other words, numeric.
-c show the codewords rather than decoding them. (for the curious)
-b# fixes the bit rate of the pocsag decoding effort. For example using the option -b1200 will set the bit rate to 1200 bits per second. There is no space between the 'b' and the bit rate value. Note, setting the bit rate to zero will put the software into autobaud mode. (Auto baud mode is the default mode anyway).
-p# sets the serial port that your decoder is plugged in to. For example
-p3 will make this program expect to use com3 to decode pocsag. (The default is com1).
-r This is a fun option: between codewords, the program will spew out just raw data. If the program is in autobaud mode then this raw mode will also print out a value in parenthesis whenever the bit rate is changed. (The value is the new bit rate).
-u Put the program into batch mode: an end of message is indicated by a line feed. In addition there is no pretty printing or newlines outputed save the terminating one. (The newlines in the pager message are escaped.)

If the codeword display option (-c) is not enabled then the program will have the following output format.

```
error in codewords indicator
/ source address end of message indicator
/ / /
+xxxxxx x x/xx: ... message text ... <
\ \ \
```

```
\ \ total codewords in pager message
\ codewords in error
pager address (in hex)

note: To stop the program press any key but control-C.
note: In ascii mode, all characters except those less than ' ' will
be outputed as received, the others will be outputed as the pair
('\', '0'+ received character). The character '\' is outputed
as the pair ('\','\').
note: a dollar sign will be printed on a line by itself everytime
a sequence of batches ends.

Honorable mentions:
There is a noise detection heuristic in this code which is used by
both the raw option (-r) and the autobaud option (-b0). It works
well for the raw option - raw data that is obviously noise (or is it?)
will not be printed to the screen. The facility of its use
in our autobaud detection heuristic (described below) is open for
debate, however. You can remove the entire noise heuristic if you want,
it was put in for channel analysis convenience.

As indicated, there is a autobaud heuristic. Simply, if the paging
channel is not noisy and we are not currently decoding any batches and
the average of the previous bit times is close to the average of the bit
times being received now, then change the bit rate to 1/(average bit
time).

challenge exercises
-------------------

- If you notice, some pager messages contain gibberish - neither
decipherable with ascii or bcd decoding methods. Are these
encrypted pages? Hint: we have seen cases where an equal size
message is sent encrypted but also sent ascii plaintext.
- Use this paging program in raw mode to decode other other
digital formats. For instance, turn to a cell phone voice channel
and try to decode the in band signaling digital tone.
- Research My Lai.

Tim, thanks for the frequency... im not 100% about the WARS and vpd/vfd stuff
but on friday found thiese freqs. very active. i don't have a TT but it shure
sounded like they were skipping within thies freqs.
856.462
856.712
856.962
857.212

some chatter sounded police like... this could be a sign of the wars change
over.... also did you hear the ERT test on chan 5 of the VPD? they were near
the 2nd narrows bridge testing a FLIR system with a symolcast in a com center
it sounded like a "hot test" with AIR ONE after some guy near the docks and the
dog and ERT units on the ground the helo. was useing the FLIR folowing the bad
guy... if anyone as any more info on this that would be very cool.
thanks.

A good quality TV balun is fine if you don't need to run power through it. Just avoid the 10 cent "cable TV" types & you should be OK. Channel Master makes some nice outdoor sealed units with heavy guage leads.

Source record: 163921

There are 3 10 codes that I know of:

10-1 Officer needs immediate assistance (emergency)
10-4 Assignment received as a 2 officer unit
10-99 Assignment recieved as a 1 officer unit

Then there are the incident reporting codes

1 Domestic Disturbance
2 Disturbance teenager
3 Disturbance drunk
4 Disturbance noise
5 Disturbance, other street
6 Illegal parking
7 Sick removal
8 Injured person
9 Person down
10 Dog bite
11 Suspicious person
12 Citizen calling for help
13 Lost person found
14 Alarm
15 Ambulance call
16 Fire call
17 Escort
18 Traffic accident
19 Other miscellaneous incident

Then there are the police action codes:

Adam - Not a bonified incident
Boy - No person found
Charles - No such address
David - No police service necessary
Edward - Perpetrator gone on police arrival
Frank - Peace restored
George - Advised warrant
Henry - Advised to recontact police if repeated
Ida - Returned to hospital
John - Returned to home or family
King - Taken to district station
Lincoln - Information report submitted
Mary - Issued traffic citation
Nora - Issued non-traffic summons
Ocean - Advised legal help
Paul - Other police service

Robert - Arrest made
X-Ray - Miscellaneous, included in exception report
Young - Animal bite information report

Does anyone know anything about the PRO 2040 from Radio Shack. I don't seem to see it mentioned anywhere.

Can it be cellular restored?

Where is THE authority of Mods available for different scanners?

Yes, I'm new here.

Uncle Neil,Your choices should include:
1] A bnc connector and a real 900 meg ant with low loss coax, but all this maybe illegal anyway.
2] Get a cellphone.
3] Get a simplex auto-patch for a commerical radio.

Good luck

Hello. I have a InterNational portable SW/AM/FM radio for sale. Best money
or trade offer excepted. The radio is in perfect working condition and
good cosmetic condition. Please e-mail with any questions or orders.
Here's all of the information on it:

-volume, band selector
-built in front fire speaker, headphone jack
-analog frequency display, frequency tuning knob
-world time zone map on the back
-antenna, carrying strap, batteries
-RX: 6 shortwave bands, AM radio, FM radio

Those freqs are reg'd to clearbrook communications, mount seymour repeater site(LTR), I don't know what you heard but it coulda been anything. Also 856.2125 completes the trunk.

I don't think VPD will go 800, MDT's make it unnecessary for privacy.Trunk 800 doesn't go over hills very well, and doesn't allow instant comms, but you never know what the salesmen are telling them, they might do it. Delta is 800, but the main channel is conventional, untrunked. I've been curious what they are going to do with their comms locally here because of all the problems with maintaining comms through jurisdictions, ie. car chases across Boundary road, etc..

VPD 5 and sometimes 6 are great for training exercises, and tactical stuff, lots of good listening there.

Bryan,
I think you meant to say "zercon incrusted receptor". Please be carefull
as not to confuse this with the "filibopter incrusted receptor", used in
transmitters. The preformance would suck if they got mixed up!

I own two trunk trackers one 235 and one 895 and no they do not cover cellular, even the images are hard to get, after all the trunk tracker is a high quality radio that do not recieve many stray frequencies that it's not suposed to. I have nothing but good things to say about the units and I run several scanners in my business. They are sensitive but also very selective so I can drive through pager and intermod infested dowtown and not be bothered by any crap. I normaly operate in conventioal mode and then switch to trunk tracking mode when I have to. They are a better conventional scanner than any of my other units including the 760. well woth the money.

Why use the G/Wiz Application when you can trunktrack this system in the
first place. The new verison of etrunk.exe allows you to trunktrack this
GE/EDCAS system with a 2 scanner setup.

For EDACS information on the Irving TX system, see:
http://web2.airmail.net/lblant1/dfw/irving.htm

For information on the etrunk.exe application, see:
http://web2.airmail.net/lblant1/dfw/digital.htm

For the Dallas Fort Worth Scanner Listeners Homepage
http://web2.airmail.net/lblant1/dfw.htm

No, but there is a freeware utility out that allows EDACS trunktracking
using a two scanner setup.

See http://web2.airmail.net/lblant1/dfw/digital.htm for additional
information.

I found that if a speaker was connected between the tip and sleeve of a stereo plug in the cloning port of the DJX10e that faint audio could be heard. Turining the and voulume up and down doesn't change the audio level, and the squelch has no effect on it. Could this be a discriminator output?

Other crap deleted!

This has been a good example of the tricks & games played by YOU
& others in the area of forgery!!

The actions you all made of forging the posts to look like they had
come from me were very well done. You fooled most, but not all.

I see that you spread word that I had been kicked off of Sprint.
Yet I have NOT been kicked off of Sprint, & my posting headers
would show the path & posting host of Sprint to prove you WRONG!

Since making you grandstand that I was kicked off of SPrint, you
have basically left this NG, obviously not able to support your
statements with facts.

If you can find the PRO-64 for less that $200, grab it...
400 channels
triple conversion
computer programmable

The base unit, PRO-2041, is on closeout for $170.

See Ken Plotkin's web page for further info:

John,

I just picked mine up on Thursday, but, I have to say -- the fun is back in scanning. It used to be fun searching for frequencies, but there's only so many. Now, it with all of the possible Talkgroup IDs in each system, it makes for a lot of fun.

As the other guy has said, the info can be a pain, but if you're in a big city, then you're probably in luck. The PRO-90 is definitely worth the sale price. It also includes a nice compilation of public safety systems around the country. If you're lucky though, you'll probably find out the freqs on a web site, or from someone else. Then -- the fun begins.

The *only* bad thing that I have found so far (well, it's more annoying than bad), but the backlight doesn't stay on for more than 15 secs. It'd be nice if they had a key-combo to keep it on indefintely. There is a mod for it, but the circuitry is so small that you'd have to be an expert in soldering to do any mods. Also, the radio is fairly well assembled, but the cpu is covered very securely.

Get one while you still can, as it's worth the money --

Nick

To all those hopefulls out there for the new EOCC project! All of
Vancouver Fire and Police will be going to the GE Edacs System at the
end of the year! First it will be patched from one of the 65 800Mhz
channels to the current VHF channel. Then when this shitty Edacs system
works, then everybody including EHS will go to this new system! I sure
like to here stories about EDACS!!!!

Anyways, regarding Channel 5 by the Second Narrows! This is part of a joint operation with Air 1 on a shots fired called on Wall Street! and the suspect fled to Columbia Containers and was fed to the VPD Dogs! Anyways! Air 1 is part of the lowermainland joint helicopter system where they will be tracking all future code 4 chases in the lowermainland and is equipped with all channels! not a patch!

VFD channel 4 is 155.4600 in all Spectra mobiles and 154.2500 in all the Sabers! Most radios haven't been converted yet! All channels in the ERC publications have been confirmed and submitted by me!

Good Luck!

No, the total length is about 36 inches, each leg is a quarter wave i.e. 18
inches.
Total length of a dipole (Feet) = 468/frequency.

If power is mediocre, your best bet is to connect
an amplified speaker to the headphone jack. Radio
Shack's amplified CB speaker does a nice job.

If it's the quality of the sound that's mediocre,
then remove C-130 to sharpen it up. Or, try smaller
values for C-130 than the stock 0.01-uF. Like maybe
0.005-uF or even 0.001-uF. But straight removal
should be the first thing you try.

In e-mail, Oblahdee Fada said he was going to
post some shit about me "child molesting".
He made a grandstand play to try to "scare"
me. I told him to do whatever he thought
was best.

Now I realize he can't think. Mike Alexander
observes how OBFD can't even walk erect. One
of the guys here in the lab says OBFD can't
do anything erect..... so that about says it
all, I guess.

> As for Oblahdee Fada , he can't make up his mind about whether he likes

Hey Matt! VFD fire tac 4 is 154250. What's happening to the VPD radio system? are they leaving the vhf?, and /or harmonizing on a new system with the new com center at hastings and cassiar? whats the scoop? Sorry I cant answer your mdt question, I thought that was voodoo stuff that mere mortals couldn't decode.

1162. Pro 90 opinions?

Newsgroup: rec.radio.scanner
Date: 1998-04-11 00:00:00 UTC
From: jandrews@NOSPAMslip.net
Message-ID: <jandrews-1004982239120001@sf-asc1-140-141.dialup.slip.net>
Source record: 163979

I'm pretty new to scanning, and recently was lucky enough to get a 2006, which I love. I want to get a handheld, and see that the Radio Shack Pro 90 (300 channel TrunkTracker) is on sale. I'd very much like to get some feedback about this machine....pros and cons. Are there other handhelds I should consider? By spending more can I get something better? I guess the TrunkTracking feature would supplement my 2006 nicely (though that doesn't seem to be too important here in San Francisco, yet).

Are there other TrunkTracking hand helds I should consider? Should I forget about TrunkTracking and get something like the ICOM R10? Is there an older cellular-modifiable handheld I should look for used?

Thanks in advance for feedbak and advice!

John

Well I for one am aware of the equivalent. However the company that sells the product (RS) labels the product specifically "1200 mAh"

In an era when so many companies disguise the contents of their products so that you cannot compare across brands (for example have you ever tried to compare cans of coffee?) I find the "mAh" units helpful-especially when comparing battery capacity of AA batteies.

>Not true! Quarter wave VHF/UHF antennas are easily made out of scrap
>materials and cost next to nothing! Try welding rods, braising rods
>(better), wire coat hangers etc.

Antenna building is one of the neatest parts of this hobby - you can
do great things with a little ingenuity and only a few bucks.

Once I was talking with a guy on two meters and I asked him about his
antenna:
He: "I'm using a $400 dipole"
Me: "You pulling my leg? Four hundred bucks for a dipole?"
He: "Well it seemed a little overpriced but the guy threw in a 28"
colour TV with the deal"

Try your local hobby shop - they sell brass rods which are cheap and
useful for making vhf/uhf elements. Solder a really thin one to a BNC
connector and you have a real improvement over the duck.

John:
I only have the Pro90. I got it yesterday. Works very well and seems to be clearer than my old Uniden 2500.

Just getting in to tracking. Set up a couple and they work well. Getting all the info is a pain. Ask your dealer for their info before you agree to buy. I also suggest that they demonstrate the local operation so you are sure it is not an Ericsson system that cannot currently be scanned or trunked.

My suggestion is to check the freqs in use in your area. If you are in a metropolian one, you probably need to get a scanner that goes in trunking mode at least to 938 Mhz. The Pro90 goes only to 868.9875 in trunking mode. The normal range stops at 956MHz but it does not trunk that high. I'm not sure about the BC235.

Announcing:

."Hamfest INDIA '98".

To be held in Bangalore, South India.

Bangalore, high tech and ham capitol of India, is proud to host this
hamfest in the 75th Year of Amateur Radio in India.

1500 hams are expected to attend this three day event. All foreign hams
are welcome and encouraged to attend.

2nd Oct. 2pm Registration.
3rd Oct. 10am Doors open, technical meetings, exhibits, etc.
lunch and dinner included.
4th Oct. Planning meeting and closing of hamfest after lunch.

Activities during the hamfest will include exhibition stalls where
manufacturers in electronics and other related products will
display their wares.

The registration fee is Rs.200/- This is about $5 U.S./

If any one needs assistance booking hotels,
sightseeing trips, etc., we can help.

For more information visit our web site at:

http://www.angelfire.com/in/hamfestindia98/

or contact:

- VU2LU, Ramesh, vu2lu@hotmail.com (India)
- WA5VPW, Jim, jpfin@worldnet.att.net (United States)

73 and hope to see you in Bangalore in October!!

Source record: 163998

They are cordless, from 901 to 927 mhz, depending on the phone. These are not blocked, but if you don't have a triple conversion scanner then celphone image interference can make them very hard to find. BTW, they added a bunch of channels to the loband phones, they start down in 43 mhz now. Search 43 to 47mhz.

1182. Bearcat 100XLT battery replacement needed

Newsgroup: rec.radio.scanner
Date: 1998-04-11 00:00:00 UTC
From: inigo@montoya.net
Message-ID: <35408a96.6893030@news.swbell.net>
Source record: 163999

I found a Bearcat 100XLT scanner at an auction for $35. I'm guessing that it works, because I was able to power it up for a couple of seconds. However, the battery pack is apparenly shot.

Could I pop down to Radio Shack and get the 7.2volt 600 mA battery set and put it in the original Bearcat battery pack? There's a little circuit board in there, but I don't know if there's anything wrong with it or not.

I don't want to spend a ton o' bucks for a "real" Bearcat replacement pack unless it's absolutely necessary. Or maybe I could put it in some sort of stand and use it as a base scanner, wiring in a power supply? If I could just figure out which of those terminals is positive and which is negative...

I use a PRO37 for this, I put a small 3/32 plug in the back of mine. I
didn't use any caps or shielded wire for this one, just regular
insulated 22 gauge wire. Hasn't caused any problems yet, gets 100%
copy on pocsag and trunker right next to my monitor.

me,or
>is there many variations of this theme?I am getting overwhelmed and
>confused.I need help bringing it all together to get it working.
>
> .....Sorry if its long,I need help.TIA,Jerry S.

FWIW, I just built the attached [.jpg] circuit with no problems
whatsoever, I didn't use a PC board at all, just soldered everything
together making sure it would all fit into the RS D connector hood.
(276-1549c) There was enough room inside to put a phono plug out the
top for the audio input, then I came out the hole in the back with
some belden datatwist (it's like 8 wire phone cord, I'm sure any wire
would do), to another 25 pin connector.

I use this with mdt on an old ibm 486 33, works great! You plug the end of the cable opposite the circuit into your other computer. I made it like 10 feet with no problems so far. You can then process the raw data to make some sense of it.

Sure checkout:
http://aab.42.org/poc32/

Its got VERSION2 of the famous poc32eng.exe program.
If you do a web search for pocsag you will get more then you ever
wanted to know about beepers and pager protocols..

<tigerwing@aol.com> writes

Hi,

>I am interested in purchasing a portable scanner... saw one that is on sale at
>Radio Shack... any suggestions?

If your looking for "wide coverage" and you can still find one the PRO-
26 was on offer not so long ago at $199 - you would get full 25-1300MHz
coverage (less US Celluar).

The PRO-60 might still be around with some shops and again was on offer
at a considferably reduced price ($149 ?). Both of these models would
give you wider coverage than anything else currently offerd by RS.

The PRO-64 would appear (from hat I ahev erad) to be on offer and whilst
it does not have the coverage of the other two it does have the
capability to be connected toa PC so you can upload frequencies an so
on.

Kind Regards,

Cheers,

From: gregg.owens@sprint.sprint.com
Message-ID: <6grb73amb1@nnrp1.dejanews.com>
Source record: 163810

I have recently purchased a new MinitorII. The unit works fine for my company tones but also responds to several other tones in the county.

I have returned it for service 3 times and it still does it. The unit was completely replace the last time.

Any ideas ?

The unit is set for A-B C-B pattern (or should be).
The only thing I can think of now is that there might be a timing problem.

The tones in this area are dispatched in the following timing;
1.2 - 0.2 - 1.0 seconds (the 0.2 is the pause between tones)
Is this a consideration ?

Are PL Tones a consideration ??

Any information would be appreciated.

Thanks, Gregg

Thanks Millin... could you post (or e-mail me with) the frequencies that you've found for the vancouver area... im looking for the channel for the EHS car-car i think i heard it called Ch. 18 or somthing

Also i was listening to the parrade in little inda yesterday... all the Papa untits (papa for Parade) was a welcome change to the regular police talk... they used Air 1 for croud controle but Car 10 or 90a could see the video feed in 312 or 2120 do they use Microwave of SlowScan?? if its slowscan could it be posible to intercept the freed on my scanner??? also does anyone know where Air 1's landing pad its located?

And i also heard that Air 1 was doing a demo for some TV cameras and i was waching the Local news and didn't see anything!!! oh well...

THanks Matt.

This is the kind of behavior that will eventually cause our government
to make scanners, and scanner listening. In most locals, this is
illegal.

The "S" on his cape stands for "Stupid".

Hey there...

I have for sale a pair of Motorola Spirit Single Channel Monitors which look like pagers. Model A903JVC2468AC. Both are currently set to 138.325 MHz N-FM Mode. Previous user: South Carolina Naval Airforce Base (didn't say exacly which one). Both come with a mini 1.3 Volt Rechargeable NiCAD and a beltclip, plus a charger for the batteries. They both work fine, and look just like pagers. I think they can probably be adjusted for any freq in the 138-174 MHz range, if you have the skills. Asking $45 for the pair and the charger. May consider a trade also. If interested, please email me. I am in the Philadelphia, PA area. Thanks.

Actually in many places it is illegal to have a scanner in a vehicle,
unless you either are a licensed amateur operator or have a permit. The
other option is if you are a firefighter,however you still are not supposed
to have law enforcement frequencies.

Source record: 163818

For Sale: PRO-2006 scanner with the HB-232 computer interface installed, with a VADER interface/recording board. The 2006 has the discriminator tap installed also, along with the HB-232 interface. The VADER is a full-size PC card that couples to the HB-232 to give you the capability of unattended monitoring, with later playback by frequency, time, channel number, mode, etc. Includes the software for the HB-232 and the VADER card. The normal new cost on these items were:

PRO-2006: $395, HB-232: $150, and VADER: $300, RS-232 9/25 cable: $15, total of $860. I'll sell the entire package for $475 plus shipping.

Contact by EMail if interested.

BTW- There will be NO QUINTE Air Show this year... They will be holding one
in 1999

From 8 Wing's (aka CFB Trenton) webpage:

The 1996 Quinte International Air Show was the most successful yet
with more than 125,000 visitors.

Although the air show is normally held every two years, QIAS 98 has
been cancelled ([1]see related article).

Planning will soon be underway for QIAS 99 which will coincide with
the 75th Birthday of the Canadian Air Force!

Check back - this site will be updated as the planning staff start
their work.

And if your not accusing Bill, then why would you post the above for all the world to see?
>
> > As for wasting bandwidth, you and John are doing a good job of that all
> > by yourselves and there are many people who will agree with me on that.
>
> Very few people have waisted MORE bandwidth than YOU!

As for me wasting bandwidth, my seven postings are a drop in the bucket compared to your postings John.
Out of 961 postings John how many of yours are on topic and don't waste bandwidth, plus you add the 20 new ones where you are using the jmackey@parg.org email address.

It is you who are wasting the bandwidth on here John,and many on here will agree with me, you don't have a life of your own and the only way you can validate your existence is to continue your attacks of Bill on here.

As I pulled into work the other day there were two county sheriffs with guns drawn on three burglary suspects in the parking lot. There were several people out watching, with one guy across the street verbally abusing the sheriffs.

When we got back inside I gave 'em the poop on what had happened (the miscreants broke into an house as the owner was escaping out the back). I knew it was them because I recognized the car's license plate.

Anyway, one of my cow-orkers said it was illegal to have a scanner in Missouri. Not in your car, ILLEGAL COMPLETELY! I didn't bother arguing, but just nodded.

Yes, I realize and know it is not legal in a lot of states and places
to have a scanner in a vehicle, but it is normally legal to have in
your home. Your best bet is to check with your local law enforcement
to see if it is legal or not, which is stated in your scanner manual.
Besides I don't think the law enforcement is gonna be checking for
scanners any way, they have more important things to do.

And if you want to monitor police freqs you can get a Bear Tracker by
Uniden that has preprogrammed police freqs by state. It's very small
(about the size of a radar detector).

Subject: Usenet Posting Summary (Tue, 07 Apr 1998 04:01:41 CDT)
From: Joe Greco <jgreco@ns.sol.net>
Date: 1998/04/07
Message-ID: <19980407040141.18454@ns.sol.net>
Newsgroups: news.admin.net-abuse.usenet

This data has been gathered by Joe Greco and sol.net Network Services
as part of an ongoing project to monitor Usenet trends and abuse.

There are currently two items scanned:

1) "From:" header
2) "NNTP-Posting-Host:" header, if present

All articles sharing the same header (i.e. all articles with a
"From:" header of "jgreco@ns.sol.net") are counted together, with
a summary of the number of posts, bytes posted, and BI. Only
articles that have a BI of 20 or greater are summarized.

Please remember that BI is a general formula to measure the
number of groups posted to in a manner which favors crossposting.
The fact that the posts of a single poster may have a BI of 20
does not imply that the articles are spam, as each article may
have been completely different and unrelated.

#include <std_disclaimer.h>

Automated data gathering mechanisms have collected the data presented
in this report.

While this information is considered to be relatively reliable, it
should be noted that problems do occur and the data gathered and
reported might not actually represent an accurate picture of reality.

#include <bsd_disclaimer.h>

This information is provided by the author "as is" and any express
or implied warranties, including, but not limited to, the implied
warranties of merchantability and fitness for a particular purpose
are disclaimed. In no event shall the author be liable for any
direct, indirect, incidental, special, exemplary, or consequential
damages (including, but not limited to, procurement of substitute
goods or services; loss of use, data, or profits; or business
interruption) however caused and on any theory of liability, whether
in contract, strict liability, or tort (including negligence or
otherwise) arising in any way out of the use of this information,
even if advised of the possibility of such damage.

And so on, and so forth. Now, here's the music.

Take a look at the RM100 radiopaging interface at
http://www.cylexinc.com/

It's a serial interface kit with software that is cheap, fun to build
and works well under Windows 95.

Brian

Te funny thing is that being a lesbian has put a damper on your true female position. Read the bible, woMAN was put on earth to be a compainion to man. This is completely contrary to your opinions, actions, and your feelings of self worth. This also would explain why you are so hateful. I merely stated a point, and because I don't agree with you, I am stupid and hateful? You need to reevaluate your sexual position, as well as your emotional disorder that you call lesbianism. You need not reply because I am blocking all messages on this thread, and all messages with your address.

get a life, and see a head doctor.
lesbianism is a disorder not a sexual orientation

Looks like your the one who needs to shut up.

>
>I'd appreciate any information on these codes.

The only two ten codes in use regularly are;

10-4 Message received (applies to two man cars only)
10-99 Message received (applies to one man cars only)

This is used to tell the dispatcher whether or not to send a second one man car to back up a one man car . In other words two officers are usually assigned to most calls, if the unit assigned to a call acknowledges with 10-99 , then dispatch assigns an other unit to back up the one man car so the officer isn't alone.

1225. WTB: Dead BC-200XLT With good plastic housing & Leather Case.

I'm looking for a BC-200XLT that is fried or otherwise internally not worth the price of repair. I picked up one that was supposed to be "exellent condition" that is extremely dinged & scratched. I want to replace the plastic housing and would like also to have the original leather case (which would have kept this one in better shape if the previous owners had utilized it).
The one I obtain must be in great cosmetic shape,including the display window.
If anyone out there is able to help, please e-mail with full details and price.

Thanks and happy Easter to all!

You might want to check out a high end Yupiteru scanner,certainly not a
radios hack unit.
If you are really paranoid about bugs in or under your bed then contact a
detective agency as they would have proper bug sweeping equipment, or your
local pest control company!!!!!

John,

You've seem to have tone all of your posts down for some reason.

I wonder why that is??? Could it be that you've been given a very
stern warning from your ISP Sprint?

Would you like me to post the note that I recieved back from
Sprint Security on Thursday? I'm pretty sure several people
in this NG would be very interested in reading it.

Regards,
John

Also look at Tower Hobbies catalog, they have !
I purchased the HydriMax AA at 1200mAh and also the HydriMax
four battery charger.
They work great.

Source record: 163866

Pro-2010
Model #20-114 Serial #600731
20 Channel Covers 30-54; 108-136; 138-174; 380-512;
Here's the problem, minor, but present.
Volume control needs to be up nearly full in order for audio to be heard on any VHF / UHF FM transmission. When listening to any airport things (AM Mode VHF in my area), volume output is fine.
Also, the volume is fine when you turn the squelch full left and get the "rushing noise". At anything over 1/2 volume, it blasts you out of the room.

I don't have a schematic or service manual for it. Additionally, I am a "backyard electronics repair guy" (translation is that I have been fortunate enough to be able to learn a few things throught he years and sometimes get lucky enought to fix something).
So, if you have an idea on a failed component, please also tellme where approximately I might find it.

Thanks to any and all for suggestions and HAPPY EASTER.
Regards,
Ray Miller

1239. North Carolina Cop Accused of Cellular Wiretap

Newsgroup: rec.radio.scanner
Date: 1998-04-12 00:00:00 UTC
From: kn4aq.xx.gary@mms.net
Message-ID: <3530cde5.3803308@NEWS1.MMS.NET>
Source record: 163868

A police officer in Alamance County, North Carolina, has been accused of illegally evesdropping on cellular phone conversations to obtain tips that led him to several drug arrests.

Check out this story in the Raleigh News and Observer, at:

http://search.news-observer.com/plweb-cgi/fastweb?getdoc+nao-daily2+nao-daily+83752+0++%28wiretap%29%20AND%20%28not%20index%29%3Akeywords%20AND%20%2819980412%29

or just go to http://www.nando.net/nao/

and use the "search" box to find "wiretap." (There's no "subscription" nonsense when browsing the N&O's web site).

I don't know about those, but you could quite legally locate the cordless base station in the highest spot you can, and run a phone line to it. I guess you'd need a handset that can be recharged separatly from the base station.

jmackey700@aol.com (Jmackey700) wrote:

>As a rule how much improvement in range can be expected thru repeater use?

The question is kind of ambiguous and broad in scope. I'll try to give a concise answer.

VHF and UHF radio range is typically called "line of sight." The actual radio range is extended beyond the visual sight distance, but it's a useful guide. The higher you are, the farther you can see, and likewise, the farther you can communicate using VHF and UHF radio.

Range between two handheld radios on VHF or UHF, both standing on flat, open ground without significant obstructions, is a few miles at best. Range between 50 watt mobiles in similar conditions is 10 to 20 miles.

Add obstructions, like buildings or mountains between the two stations, and the range is reduced. Add elevation to the stations, like being on top of a tall build, mountain or tower, and the range is increased - dramatically.

A repeater's range is determined by the height of the repeater, the capabilities of the mobile or handheld station using the repeater, and by the surrounding terrain.

Some examples:

Here in Raleigh, a repeater is located at the 1400 foot level of a TV tower. Our terrain is "gently rolling." A 50 watt mobile can use the repeater reliably in a radius of about 45 miles. At greater distances, the repeater is quite usable when the mobile is on higher ground (75 miles or more), but drops out when the mobile is on low ground.

A nearby repeater is on a 400 foot tower. A 50 watt mobile can use that repeater reliably in a 20 mile radius, and can "hilltop" out to about 50 miles.

Mountaintop repeaters in the west can be reached beyond 100 miles, but they are shadowed by other mountains.

You really shouldn't make accusations like that in public unless
you're sure. Ever heard of libel?

Anyway, I went to the website (after the correct URL was entered) and
they require you to identify yourself before downloading the file.
Considering the legal climate in the USA with respect to "private"
radio and telephone communications, I don't expect that many people
would be willing to go on record as possessing this program.

Also, the website is still very much "under construction" and that
gives the impression that the products may not be ready for market,
either. One page claims that a fully functioning demo of "Listening
Post 1.5" would be online on April 1. It is now April 12 and the demo
is not linked to the download page. Is it available or not?

I know the police have a device to tell if you have a radar detector. Remember that a radar detector is only a receiver as well. In fact I have a device I bought that detects if the police have a radar detector detector, its called a detector protector and made by Whitstler. Your radar detector plugs into it and if the police are using their radar detector detector, it picks it up and shuts off my radar detector so they don't know you have one. So anything maybe possible, but why would the police or any one else care if you had a

scanner? They are not illegal in most areas to have them any way, so
I wouldn't worry.

Hey CB Boy, look at my headers. I am STILL on Sprint Net, there has
been
NO service disruption for me as YOU are attempting to make people
believe.

I guess I just let the cat out of YOUR bag!!!!!!!

However, this weekend I am testing a new ISP that supports X2 (56)
connections.
If all goes well, I will move to that ISP in a day or two & end the
account with Sprint Net due to the connection bandwidth problems I am
having
with Sprint.

Dan -

I never said Bill has a warrant, I only asked if he would like to
confess
to one.

Geee, a little over sensitive aren't we?

I can NOT respond for what others have said, only myself.

Yes, there is an accusation that Bill has/had a warrant for crimes
involving children with a sexual nature, but untill PROOF can be
presented, I would NOT accuse him of this.

> As for wasting bandwidth, you and John are doing a good job of that all

I'm going to get me a scanner soon. I think I found the one I want it is in my price range and it sounds like it would be a good scanner for me to use. The scanner I was thinking about getting was the BCT7 Bearcat scannner.

I would just like to know what would be the best scanner to get that had at least 100 channels, in the price range of $175.00-$200.00, and is easy to operate.

Thanks

The PRO-2020 Was a good scanner in it's time (I bought mine in 1982!!), but it's better used now as a backup. It only has 20 channels, a very slow scan rate, and is limited in it's frequency range.

If you only have a few frequencies you want scanned though, and they are between 30-50, 108-174, and 410-512 MHz , than this will do fine.

Yup, 400 is it. You can add hardware to go about as far as you want, but I wouldn't try it if you're not pretty good at ticklish soldering & changing very sensitive components.
The Radio Shack website has original specs for pretty much anything they ever sold that is still of interest, in scanners anyway.

How come some scanner can pick up 900 MHz. Cordless (like the BC 200xlt) while some scanners can't get it (pro-90, aor ar2700) even though this portion of the 900Mhz. isn't blocked out on the scanners......?

Yeah they could do that, but they have to get a wire and a tee connector in your antenna line without you knowing it! Do ya think they might just check and see what is programmed in your scanner while they are IN THE ROOM WITH IT? It's a whole bunch cheaper to pick a lock while you're gone and see what's on your scanner than it is to buy a truck load of equipment and track your useage for a week. They could bribe your neighbors or buddies (or maybe just strike up a friendly conversation with them!) and find out what they want to know about what you brag about.
It takes a LOT more sophistication to detect those tiny signals 200 feet away than it does to detect them when you're hard wired together as in the 2 scanner example!
The whole thing boils down to this - If somebody thinks they can make enough dough by knowing you have a scanner and what you listen to, they will spend the effort to find out! If the cops think you are doing something worth knowing about with your scanner, they will expend the resources to find out! 99.99% of us obviously aren't learning anything profitable or extreemly dangerous with our scanners, hence it makes no economic sense for anybody else to spend the dollars to find out what we are listening to! Follow the money is what they say & I bet most of us don't have or handle enough to attract any attention at all.
Million dollar secrets attract half-million dollar efforts to learn them!
If you have any, I suggest you hire some serious security to protect them.

Percon just updated their web servers. The frequency searches seem much faster than before. I searched for the Baton Rouge YP Radio Service and got the result in about 3 seconds. The results indicated the actual search took 0.06 seconds. According to their web page the database being searched is from their Spectrum summer 97 CD. Just thought this might be of use to the group.

Source record: 163714

The full text of the press release from the "Smartcard Developers Assocation" can be found at http://www.scard.org/press/19980413-01/

Since the "loophole" requires physical posession of the SIM card in order to be compromised, it doesn't seem to me like this "development" is a big deal for GSM security.

Hi
If you cut open the battery pack you'll find that it contains ordinary AA size cells. I've replaced mine with tagged AA cells, no problem.

The polarity of the power supply socket is marked on the case. (I think pin is -ve, but do check!

The circuit board is a regulator and mine blew up once, no problem to replace the diodes as necessary.

Hi:

Does anyone have experience with the glass-mount mobile antennas? I like
the idea of not drilling hole in my vehicle or using a magnetic mount that may
scratch the paint.

Is there any "loss" to worry about when using a glass-mount setup?

Thanks.

-Scott

1291. Programming the PRO-64/PRO-2041

Newsgroup: rec.radio.scanner
Date: 1998-04-13 00:00:00 UTC
From: Cathy De Viney <cdeviney@ipa.net>
Message-ID: <3532D1F9.81D595D3@ipa.net>
Source record: 163720

A couple of weeks ago I noticed that ONSALE (www.onsale.com) had the Sharp Zaurus ZR5800 PDA for $89. I "won" the bid on a Sunday and the 5800 arrived on a Thursday. It is a very nice little handheld "computer", and the files are compatible with Word and Excel. I like gadgets and gizmos, I really didn't NEED this one, but my secret hope and goal was to try to use it to program my PRO-64 and PRO-2041.

The Agony:

I faxed in the warranty card for the free file transfer software and $29.95 for the cable + $6.95 shipping (credit card). It was to supposedly take 2-4 weeks for delivery...good grief...why not use $3 priority mail and take only 2-3 days? Luckily the cable and software arrived in about a week. Now came the trial and error.

Using the OUTPUT file (i.e flist.txt) from Ken Plotkins LOAD64 program or the XXX.prn file from my Excel spreadsheet, I tried to print to the serial port on the PDA (after transferring the file from the desktop to the PDA). That is how the spreadsheet works...it does the checksum calculations, saves the file as XXX.prn, then "prints" to COM1 set as "generic/text only" printer, which is really my 64/2041. No luck...every printer I choose just sent gobblety gook (I monitor what is being sent by hooking up the serial port of the PDA to the serial port of my desktop, while in direct connect mode using ProComm 2 on the desktop).

Next I tried doing a direct connect using the terminal on the PDA (connect with no phone number provided). This sorta kinda worked, except I was just getting "returns" but no "line feeds" (i.e. all 400 frequencies/channels were writing on one line, instead of 400 lines. I really wrestled with this one...I tried saving the file on the desktop with different file formats, adding the control code "^M" to the end of every line....no good. Then I tried every setting I could think of on the PDA's terminal program, and every combination of settings. Still everything printing on one line. I FINALLY noticed a little turned up corner at the bottom right of the PDA screen...yea...two more pages of various settings...and combinations of settings!!!

Well, I finally got the right combination of settings, and started getting line feeds...very hopeful! But all my 64 could say was "PC PGM"...no "PC CONNECT"...heavy sighs, frowns and cursing followed!!!! (The PDA cable is hooked to the homemade cable I use to program the 64/2041 from my computer, from the serial port on the PDA to the earphone hole on the 64).

The Ecstasy:

Brainstorm - insert a null modem between the two cables....and POOF..."PC CONNECT"..wait a minute..."FINISH"....yahoooooo! 400 channels programmed!

Here are the "secret" settings!!!! In terminal mode-
setup...virtual screen...small font
configuration...2400,8,2,VT100,local echo
block, horizontal=40, vertical=8, tab=8, delay=0, send LF/check, receive LF/check

This is a great little machine...2MB of memory, backlight, etc. I picked up a used PCMCIA 14.4 modem for $25 (that's as fast as it will take) from EBAY, that will work with a land-line or the cellular. You need to use an AC adapter (9V 300 mA, negative tip works) or the optional battery pack (list is $199, available for $120-$150) to use the modem. The two internal "AA" batteries can't run the modem by themselves, but will run the PDA for 75-100 hours!

I did a little experimenting and built my own battery pack for under $6, with 3 parts from Radio Shack:

270-407 or 270-387 8 "AA" battery pack $1.49
270-324 5/pk 9V snap connectors $1.89
274-1567 2/pk 5mm X 2.1mm coaxial plugs $1.89
and I already had 8 ni-cads

At Walmart I found a "day planner" by Mead that zips on 3 sides, comes in various colors, is about one-half the size of a notebook, for $14.88 (there is a smaller one, just bigger than the PDA, for $11.88). The 3-ring binder easily slips out. I put a strip of velcro (gotta-love-it!) on the bottom-front of the PDA, to hold it in place on the case, and used two stick-on rubber feet, stuck to the day planner, at the bottom-back of the PDA to sorta angle it forward and to keep it from scootching around.

If anyone wants Ken's LOAD64 or my Excel spreadsheet, go to Ken's website:

http://www.access.digex.net/~kplotkin/scanner.htm

I hope this long ramble might be of interest to others, and not just a waste of space.
I thinks it's pretty COOL, but I'm pretty geeky and easily entertained!

A couple of weeks ago the PRO-64 was on sale for $150. I just picked up a second PRO-2041 (for the car) for $170 last week.

CATHY

You want to use a core that is designed for the frequency in question.
Not all core material is created equal. Some works great at HF and lousy
at VHf, others are the other way around.

Source record: 163722

Both scanners can receive any analog transmissions in the 900Mhz range. The BC200XLT is a double conversion receiver, meaning it hears "images" of signals on frequencies other than the ones displayed, in this case in the 869-694 cell-phone range. The difference between the "image" signal and the displayed frequency is twice the first IF. In most scanners, this means the image signal is 21.4 or 21.6 Mhz away from the displayed frequency. The Pro-90 and AR scanners are triple conversion and do not have this image problem.

I suddenly realized something.

Remember a few months ago how this flame war all started? Bill Cheek
was making posts under false identities. He was primarily using the
id's of "WinRadio" & "Billy Thunder".

This all started by Bill Cheek's actions a few months ago. Now
Bill has limited his posts to only an occaional flame or harrasment
but all the trouble is still going.

WE WERE ALL DUPED!

Bill got us all fighting and is now sitting there enjoying the attention
he gets by causing trouble.

LET'S LET THIS ALL DIE!

If we ever hear anymore about he warrant in 1993 for Bill Cheek, I am
sure that will surface on this NG. Otherwise, let's let this DIE!

1304. POCSAG troubleshooting tips...

Message-ID: <353308AC.7282@NOSPAM.ucla.edu>
Source record: 163733

Hi...

I was having trouble with my POCSAG data slicer (aka the All In One interface or QuickNDirty interface). The PD204 software detected the signal, but I barely decoded a message correctly... I made four errors, and thought I would share them for you dejanews troubleshooters:

1. I tapped the AM discriminator pin instead of the FM/NFM pin on my 2042. (quickly spotted)
2. I had the attenuator set at -10db (dumb)
3. I had John M's Programmit Parallel interface connected (a great product, by the way)---I can't decode when it is connected. (strange?)
4. I built the quick and dirty interface (http://www.geocities.com/SiliconValley/Lab/1067/). I couldnt' decode until I changed the 100k resistor to a 50k resistor (increase the feedback). You can imagine how long that one took me to find! :)

Good Luck,

Chris Stankevitz

1311. AMR Boulder, Colorado 800 MHz Freqs?

Newsgroup: rec.radio.scanner
Date: 1998-04-13 00:00:00 UTC
From: Mike Beaty <mbeaty@nyx.net>
Message-ID: <892440122.757480@iris.nyx.net>
Source record: 163757

AMR ambulance in Boulder has used 155.280 MHz until recently, but now they're switching to 800 Mhz. Now, I've picked out a few freqs in Denver's trunk, but haven't really been able to confirm that Boulder cars are on it. Denver sounds like they're on at least a 5 channel trunk including 851.6625, 851.2375(?), and 852.1125.

Any one have better information?

Thanks!

Mike

For all Georgia, USA residents, or people who like to drive. I have found a supply of the Emmerson Research "Atomic" clock radios at the Super Walmart in Hiram, Georgia. They had about 6 tonight.

They have been marked down from $38.95 to $19.95! I got one today, and it works great! I checked the Wal-Mart on Hy-way 41 in Marietta, Georgia, but they did not carry them. The store is on Thornton Road, and there phone number is (770)-439-1028. And NO, I do not work for Wal-Mart. I just had a hard time finding this radio. Later, BiLL

I've had my Pro-90 for about 2 months now and it's great! The entire city here is trunked and scanning before the trunktracker was a constant problem with all the missed answers. Probably the best feature tho, is the ability to listen to only the ids you want to listen to. All in all, I couldn't be happier with my 90.

I would be more than happy to trade you a Talkabout, but a VISAR
is not a talkabout. Talkabouts are Family Radio Service radios,
a Visar is a portable radio for Public Safety and Commercial use.

1332. Digital Cellphone Loophole

Newsgroup: rec.radio.scanner
Date: 1998-04-13 00:00:00 UTC
From: malexder@aol.com
Message-ID: <1998041314074400.KAA12317@ladder03.news.aol.com>
Source record: 163778

The Wall Street Journal reported today:

"Computer-security engineers said they have found a weakness in the world's most pervasive digital cellular-phone technology, a flaw some fear could eventually allow unscrupulous hackers to obtain free service by impersonating legitimate customers."

"A software developer and two graduate students said they can extract key security information from so-called GSM digital cellular phones, a technology in use by almost 80 million people world-wide. The breach is notable because such phone systems, unlike older analog cellular networks, were believed to be practically tamper-proof."

"The security information is contained in a "subscriber identification module," or SIM card, a credit card-like device inserted into digital cellular phones that identifies each customer to the telephone system. The engineers said they could copy the card and store its information on a computer or a device as simple as a hand-held electronic organizer. When the computer is connected to a phone, the cellular network believes it is being used by an authentic customer."

The article also mentioned that the two students (they are the same pair that found a big hole in Netscape crypto in 1996) were planning to demo software they developed to get security info from the digital cellphones but were unable to. Their attorney told them that just having the software was probably a violation of federal law.

In comparison, building a scanner that could pick up and decode digital signals seems rather possible.

I received the Pro 90 for Christmas and I just do not use it!

Includes everything that came with it, except the box, also includes carrying case.

$ 165.00

In WWII, the Nazis used the radiation from radio receiver BFOs to find people who were tuned to specific frequencies. (i.e. the BBC.) So it's nothing new.

I think you're both wrong. Anyone knows that an incrusted receptor will only work at frequencies below 24.6376 mHz. Since scanners operate above this any type of incrusted receptor would be useless. I believe the device you are looking for is a "graphicious implicated transgnomen" these have been shown to work at frequencies as high as 1,000,000 burgerknuckles.

Hi!

I am in need of the schematic, preferably a SAMS or RADIO SHACK REPAIR version of the PRO-12 Scanner. I have a copy of the Radio Shack Repair Manual, but the page with the schematic is not as clear as it was. It's virtually useless. If anyone has a copy, let me know. I'll pay copying costs for an entire SAMS repair data on this unit.
Please E-Mail me direct.......

Thanks,

Lou

> (BC2500XLT), and it suffers from intermod pretty bad.

The 2500s are notorious for that.

> Are they equal receivers as far as intermod rejection?

The testing of my two units shows that the 235 is a tad
better, but both do a great job.

> Are they equal receivers as far as sensitivity?

Haven't done direct comparisions between the two as it
is usually never fair when one is a handheld and one is
a base unit, but both are very sensitive.

> Do the trunk trackers reject the control channel well?

You mean keep interference from disturbing the control
channel so that the trunk tracking stays stable? If so,
then I would say yes. There are some hiccups from time
to time but I don't know what causes them.

> Is intermod a problem of either?

For the most part, no. But any radio can be made to
"spill its guts" should it be put in the right conditions
where strong signals are nearby. Of all the radios I
have tested these two hold up VERY well.

> Is the volume adequate on the 235 for use in a car?

What kind of car are we talking about? If a Cadillac
or Lexus, it MIGHT be sufficient ;-) otherwise you'll
be better off getting an amplified speaker or running
through a casette deck.

Hope this helped. I have written some articles on these
two radios, so if you're interested, stop by :

http://www.qsl.net/n2mca/IMP235.HTM
http://www.qsl.net/n2mca/IMP895.HTM

And you are aware that the 895 has wider coverage
and many more features than the 235, right? Or perhaps
you are thinking about getting both, as oppossed to

choosing one over the other?

Happy reading and good luck with your decision!

About 15 yrs ago, I had a drake b line. I was doing some work with a theatrical lighting company, and had a bazillion swatch samples of thier plastic filter material. Almost any shade of any color you could imagine. I used some the the mateirial as filters to make my drake dial illumination any color you could imagine. Finally, I found a color that stuck! I believe it was a light turquose color. This stuff was heat resistant, and i will bet whoever has that rig still has the filter unless he doesnt like the color. I also have some rare General Electric light bulbs in 60 watt soft white for sale for only $5 each. I have some Sylvania units for $7.50Don

Hi,

I'm looking for info on the NJ State Dept. of Corrections.
Specifically their radio call numbering (100 to 900 series), facility
numbering (1100 to 2700), and 10-codes. The 10 codes list in Police
call is somewhat accurate but i'd like to obtain a more accurate one
if possible.

thanks,

Joe

I'd agree that you might want to verify that your local system uses a supported trunking systems, but, that aside, go for it. Listening to trunked systems on a standard radio is a pain. The Pro-90 works great for me, and I'm still amazed at all the stuff that I was missing before.

-Bryan

go to www.usascan.com for a good deal on Uniden Trunk Trackers . . .

I picked up my new BC895XLT for $244.95, plus shipping and handling

the BC235XLT goes for $204.95 . . . . .

this really great deal expires April 30th, 1998 . . . . . .

Scanners, as do most radios, transmit a weak internal signal for the mixing process. If you have two scanners running, you can cause one to "jam" the other when both are set to certain frequencies. In addition, I've noticed some TV channels acting up when certain frequencies are scanned. If you had an external antenna, you *could* be broadcasting that signal even further.

Thing is ,though; It seems to work just like clockwork!

Maybe someone else has faced unexpected and/or superior
competition from this _free_ program/shareware...?

It is nothing new in screaming up and complaining about
all sorts of flaws and "blemishes" in new software.

Especially if it is better and/or cheaper then the other
competitors. Just consider the option.

I'm impressed with the program,and can only recommend it.

Regards,
Knut

It said to check back on March 24. I note the frequent use of the date of
April 1, which should cause red flags to go up. The download is available; I
have a scanner friend who is going to look at it maybe. I don't need it as
I've heard exactly two scrambled transmissions in the past decade.

Are there instructions? What do you do with the program? I'm a bit leery of running any program where there's only an executable if I'm not familiar with the source of the program. Do you need to plug it directly into your scanner or what?

Bullshit.

1) *All* electronic equipment does NOT emit RF when in operation. For
a single example, how about a DC voltage indicator constructed from
a comparator with three LED indicators which indicate "nominal voltage",
"below nominal" and "above nominal". The device uses no clocking of
any sort. This is an electronic device... where's the "RF" come from?

1a) Want something simpler to understand? An LED hooked up to a battery
through a resistor. Where's the RF?

2) For those pieces of electronic equipment which do emit RF signals
unintentionally, while it may be true for some, it is not true that
you must be in the same room to receive ANY of them. Turn on your
color TV set and pick up a portable short wave radio and see just how
far away you can get from it while still receiving the various oscilator
signals from it. Try to also see how far you can receive some of your
computer equipment. It can go a lot further than "the same room".

From: someone@where.com
Message-ID: <3533d15c.1729883@nntp.ix.netcom.com>
Source record: 163607

I heard the space shuttle is lifting off on Thur. 4.16.98. I used to pick up the re-broadcast here in central New Jersey on 443.400. Lately I have heard very little on that freq. and nothing during the last couple of shuttle missions. Has the re-broadcast freq. for this area changed or maybe this repeater doen't broadcast it any more? Anyone know of a repeater in/near/around central NJ that is carrying the shuttle re-broadcasts?
Also I have found numerous freq. lists for the shuttle on several web pages. Anyone have any luck picking up the shuttle DURING the mission with any freqs in any of the many ranges?

Thanks in advance for the help.
Tom

I guess interpetations of how this all started could be seen
from different angles.

>If we ever hear anymore about he warrant in 1993 for Bill Cheek, I am
>sure that will surface on this NG. Otherwise, let's let this DIE!

And, if someone really desired to, they might really feel
that you really wanted closure on these threads, and
truly wanted it all to die. UNTIL they read this last
part.

Now, John, do you really expect anyone to believe
that you wrote this with the TRUE desire to end
the threads? Really?

Now, if you did, the only conclusion that any sane,
intelligent person could come to, is that you are just
too damn stupid to realize that you are just prolonging
the thread every time you post stuff like this.

Now, if you really, truly are wanting to end the threads,
then do it. Just end. Don't have that childlike desire
to have the last word, just end it. Don't make another
post, unless it is truly about scanning. In that post,
don't make any snide remarks, just end it.

If you don't do this, it will be evident that you don't
truly want this to end.

Then why are you looking for a new ISP John???

No one is buying your BS story about the RA Streaming problems that you claim to be having with Sprint. They're a Major Backbone provider and have plenty of bandwidth (even with all the crap that you post).

I think this e-mail from Sprint Passport Security says it all:

Received: from mx04.erols.com (mx04.erols.com [207.172.3.244])

Search the range of 360 to 380 MHz and change the mode from AM to NFM..... You will receive cell images (just like the real freq.. , Uniden did this on purpose but didn't disclose it to the general public) also try searching from 1005 to 1030 MHz there will be some in there too. no mods needed just do the search and change the mode to NFM (narrow FM)

it may be a cellular image or it may just be overloading from a nearby cell tower you could either try a filter designed to block out the undesired signals or try using a directional antenna so as to not give the cell tower any gain, but if its a image there is not much that can be done abought it that I know of.

Can some one tell me if there are any mod or key pad tricks for these
radios? Thanks. tury8@webtv.net

I read somewhere that if you run a wire from TP2 (A littel thing sticking up
from the motherboard) with a small capacitor in series to the antenna input
of a shortwave receiver, you can tune the sw receiver somewhere in the 4.000
Mhz range and copy sideband from 25-1300 Mhz. In short, you can copy any
frequency the 2035 can handle in all modes.

>

Change the word ALL to most and you are on the right trail. Now even if you did have to be right next to it (which you do not have to be), the original poster asked can it be detected since they did not specify detecting it in a car or home lets just assume they mean in a car. If you get pulled over and an officer has a device to detect a freq output from a scanner they would then be standing next to it or within say 5 feet and could not see it so once again it could be detected.

Note that i am not saying an goverment agency has such a device or would want one. All i am saying is yes it can be detected

[Lots of bilge deleted....]

I have never been able to understand why you people worry about this topic so much. Unless you are a real bozo and planning to....

1. Go chase after cops while they work.
2. Go to every fire that happens in your city.
3. Go hang out at the next drug bust.

...cops don't care what you are doing 99.9% of the time. Be low key, don't brandish the thing like a weapon, don't carry it into department stores and follow the security people around with your frequency counter (I saw a guy actually do this), Disneyland (why on Earth do you need a scanner at Disneyland? Who cares if Mickey needs a potty break? Relax! eat a hot dog, pay attention to your kid, listen to your scanner in the room later.) or other inappropriate places where security types might think....

"Say, why does that nut have a scanner? I'll go hassle him."

I frequently stand at roadsides, waiting for trains to photograph. I am usually holding or wearing my PRO-64. When a police officer goes by, I usually wave at him. Guess what they do? Surprise! They wave back and drive on. Why? Because I look....

Like a guy waiting for a train so I can take a picture of it. They never even think of the scanner. I do nothing that makes the cop think....

"Say, why does that nut have a scanner? I'll go hassle him."

I mean really, folks. Why are undercover cops effective? NO ONE NOTICES THEM. Be like them. Blend in. Make it a personal challenge to NOT be noticed doing something you are not supposed to do. If you are really serious about scanning, go covert, screw the law, who cares?

What's life without risk?

Mike

It does have backlit keypad and illuminated display. Battery life depends on your operating habits. It comes with 4 AA size Ni-Cds rechargeable through the radio, and you can remove those and install regular AA alkaline batteries.

Adnan, Icom America Service

The problem is more than that, little fool. They also do NOT support
56 connections & they do NOT have a local access number in Sioux City.

THOSE are the other reasons I am looking to move to a new ISP.

> I think this e-mail from Sprint Passport Security says it all:
> He will not trouble anyone again at lease not from a sprint account.

An obvious forgery on your part. If this was the case, they would
have pulled my account. As can be told by my posting history here,
there has been no disruption in my account.

Hi All,
i just got a Pro-90 and would like to know if anyone can answer this question for me. Here in Orange County, California, our fire dept's use the old Type I system, unfortunatly they are split into 3 seperate systems, North, Central, and Countywide. Each one has a different fleet map, but the most channels they have is 7 for county, and 6 channels for the others. Is there a way to program a multiple fleetmaps or do I need to take up three banks?

Mike

Hi Cathy,

Thanks for the interesting and informative post. I have both a PRO-64 and a PRO-2041 myself and use Ken's load64 software. I used your battery pack mod for the PRO-64, which you posted several months ago. Do you have any more neat tricks? What kind of antenna are you using for your base 2041? I'm using a RS telescoping antenna that I had used on my old 2026. It works pretty good but I'd like to try a roof-mounted one of some type.

Well, you would have to know what type of receiver you were looking for, so as to know the intermediate frequency. Then, you need to know what frequency the receiver has tuned in, so that you can search the right frequency with your DF unit. Ranges vary, but my AR8000 emmits a hefty signal (by QRP standards, anyway) which can be picked up from much farther that 50 feet with the right equipment. My FT-50 is not as strong though.
It is extremely unlikely that some 'dark' agency is going to start DFing your radio unless they suspect you are a terrorist or something similar...
Besides, if you scan frequencies which are really far apart (i.e. you have a bank with 25 frequencies really spaced) you should defeat most near-field RF detectors (like Opto's Cub or Scout - the Xplorer is much slower).

Cheers, and happy hunting :))

I also think that other PDA's/handhelds/palmtops could be used in the same way...terminal mode / direct connect / upload / ASCII file.

I also think that the PDA, et al could be connected from its serial port to the serial port of your desktop, and then use whatever program you now use to program your scanner (PROgramit, Radio Manager for Windows, ScanCat) to send the output file (i.e. pretend to program your scanner) but be in download / ASCII file on the PDA to capture the resultant file, for later upload to your scanner from the PDA.

The previous post was just meant to say, it can be done, and hopefully get those experiemtnal/creative juices flowing! Just share your findings with the group please!

Still looking for a exellent cosmetic condition BC-200XLT.
Unit Should be considered a parts radio, I have the innards, with a rotten plastic housing. I want to put the good innards into a good plastic housing.
Need the plastic housing, leather case, original antenna.
Should have a very clear, scratch free display window and plastic housing free of dings & nicks & excessive scratching.
If you can help, please e-mail / need details on condition and your cost.
Bob, if you're reading this, have tried twice to email you. I don't know if it is reaching you. Send along your telephone number and we can try to talk the "old fashioned" way!

This from Netly News:

Clone for the Holidays
Posted: April 13, 1998, 12:05 p.m.

Just when you thought your new black-slab digital cell phone was safe from high-tech thieves hell-bent on calling Kuala Lumpur, a group of Silicon Valley cypherpunks have broken the proprietary encryption technology used in 80 million GSM (Global System for Mobile communications) phones nationwide, including Motorola MicroTAC, Ericsson GSM 900 and Siemens D1900 models.

What this means is that cell phone rustlers can now scan the airwaves, remotely tap into a call and even duplicate the cell phone's digital ID at will. As Marc Briceno, who organized the code-cracking, puts it: "We can clone the phones." What was the crypto technology's fatal weakness? Too much secrecy.

Security expert Bruce Schneier, author of Applied Cryptography, says the encryption algorithm used in the phones was pitifully weak because it was designed in secret. "Too many organizations equate secrecy with security," he says. "Relying on secrecy is always a mistake... If they went to me as a consultant I'd say, 'Don't be an idiot. Let's make this public.'" In other words, manufacturers should stick to publicly vetted codes that a bunch of bored geeks can't crack in their spare time.

Especially with a directional antenna attached to a sensitive directional
finder type of reciever. You have to remember, as someone else pointed out
the Nazis during the war used detection equipment that COULD detect radios
TUNED to stations like the BBC by pickking up the minute signal from the
suspects BFO tuning stage. I am not talking about transmitters, I am refering
to regular radio recievers that occupied people had...

From what I can see John, you've made alot of changed since last
Thursday. It's funny that all of the Rogue Cancels and Forged
posts stopped after I received this note back from Sprint Passport
Security.

By the way, MCI doesn't allow Rogue Cancels and Forged Posts either,
so you'll have to find another ISP to continue those activities!

You can add physical memory, and you can install a European CPU, but these are not something you would try unless you would feel confident changing the CPU on you video card, for instance. Not plug-in deals, & you also have to put in extra switching & remember how to use it for the extra memory.
Javiation (UK) still has replacement logic boards for the 2035 around $165 US plus shipping, (with the European CPU installed already). This is an easy swap but expensive just to "restore" cell bands. You can put a 2042 logic board in a 2035 to fix the auto-program bug, but there weren't any European ones available from Javiation when I checked & they don't expect any more. Don't know what RS wants for one (with US cell blocks, but it does fix that bug....).
More sensible (in my mind) is the Opto Electronics OS535 computer interface board- it might make the most sense - it adds more channels than any memeory chip you can solder in & requires no swtiches hanging out the back. I haven't chased this roumor down, but I have seen statements that imply some software might make this board fool the 2035 CPU into doing cellular. It's about $200, but it is a fairly simple install. There are several programs that support it. It would also negate the "auto program bug" if you have a 2035, so there is another little justification. Oh yes, I'd dedicate a 486 or better to the interface, if you want to be able to leave it doing neat things while you do other computer tasks.
Other than that, I've spent a lot of time looking & haven't come up with much else. I'll post anything further I find on here.

> I haven't chased this roumor down, but I have seen statements that imply some software might make this board fool the 2035 CPU into doing cellular.

It's not a rumor, but actual fact. Until 18-20 months ago, you could buy an Opto board stateside and "unlock" it to receive cellular by entering a 20-digit code (you have to use a software scanning program like Probe or Scancat that allows this). The Opto boards sold in Canada and overseas did not require entering a code--they were not "locked" to begin with and could already tune cellular. I'm not sure what the current status is on the overseas versions--I **think** they no longer tune cellular but you would have to check that personally to be sure.

They work, but not real well, especially in the VHF-lo. If your area is fairly RF dense you will probabaly be OK. If you live away from town then drill the hole, you will be happier. the hole in the car does not really hurt the value. It can add value to the right buyer. I punched a hole in a brand new C1500 with 500 miles on it. It only hurts the first time:)

>I, for one, do not mind law enforcement
>monitoring any of my conversations. I say
>let them monitor at will. What will it hurt?

Then you will allow them to bug your house, what will it hurt?
Then they might "decide" that you said something that could be construed as, say, willfully avoiding taxes when you bought something mail order and failed to inform the state of the taxes you owe on that item. What will it hurt?
If we can't depend on the cops to obey the laws they are sworn to uphold why do we bother making laws?
>If it saves the life of one person who
>will not be killed for a crack rock by
>a drug crazed junkie, it's well worth it.
Police are NOT there to protect ANYONE. The Supreme Court has already said that police are not REQUIRED to protect any one individual. There function is to investigate crime that has ALREADY happened. Even the simple radar trap does not prevent speeding, it only catches those that already ARE speeding.
>Privacy only benefits those who run afoul
>of the law.
Privacy benefits ALL, it helps PREVENT those with power from abusing it, just like that ex cop did. Suppose he got his cell phone conversations mixed up (cuz he is not trained to use the illegal gear he had) and busted down YOUR door in the middle of the night. He couldn't find the drugs that he KNEW were there. So, instead of looking bad he just plants some. Now you're in jail and he's the hero. Again.

1445. Re: Who is John Mackey

Newsgroup: rec.radio.scanner
Date: 1998-04-14 00:00:00 UTC
From: John Mackey <jmackey@usa.net>
Message-ID: <353392AA.4F29@usa.net>
Source record: 163683

Only a minority of this newsgroup are causing the "soap opera" you refer
to.
:(

What happened was I took Bill Cheek to task & held him responsible for
the actions he took to cause trouble. Bill is a hero to a select few,
so they all started in on me, often with lies to support their cause.

I provided truth that often burst their bubble of what they
wanted to believe.

That caused the problem here. :(

ALL electronic equipment emits RF when in operation. To detect it you would have to be in the same room with the scanner. The RF is so week, I would guess you would have to be standing next to it. Then you would not need to "detect" it, you could see it.

The documentation is sketchy, but I'm guessing that the decoding accuracy indicates the messages where all the bits were decoded from the DPLL and was a valid sequence. This does not necessarily result in the proper decoding of all messages because POCSAG does not signal the type of data, alpha or numeric, in the message. The software has to guess which ones are alpha and which are numeric, and sometimes it guesses wrong. This is just my guess ofcourse. You'll have to register and email the author for a more accurate explanation.

The jumble you're seeing are the numeric messages being incorrectly decoded as alpha. If all the incorrectly decoded messages have the same function number(s), then you can override the decoding on those functions to be numeric.

Hi,

Can someone give me a hint, what to buy of the below scanners. I have
done some research and I narrowed it down to three scanners that sounds
interesting. I'd realy need some expert advices :-)!
And I have already read Richard J. Wells reviews.

In Sweden the price on the scanners are:

UBC3000XLT $315
PRO 26 $380
MVT 7100E $425

Please send me the awnser by mail. I have a bad mailserver :-(.

Best Regards,
Henrik

I've been using version 1 with no problems but when I try to run
version 2 I get a message that a device driver is out of date. I've
totally deleted the old version including the registry and still get
this message. I seems to decode from the sound card OK but the
message about the device driver is annoying.

Any idea what device driver is out of date and where a new one can be
found??

Just a note, maybe this will help you to post to me, without
showing ignorance of the facts. .

The Talkabout, is a Motorola Radio, called the "talkabout". It
is manufactured in two versions, in a variety of colors.

Now, if he had said a portable radio, a HT, a Handi-talkie, a
Brick, handheld, or any of the other variety, I would have
approached it differently.

But, no, he said a specific product name, a "talkabout".

Now, I explained that, is a very polite manner, and you saw
fit to start flaming. Why was that? Did you have a
bad day today?

A little further education for you, might be obtained at

WWW.mot.com

The home page has a "Talkabout" radio prominently
shown, and includes a link to learn more about it.

Have a nice day, and if I can help you in understanding Motorola
radio products better, please don't hesitate to ask!

> Is this true?

No, that is not true.

The PRO-2006 came with 400-channels, but is capable
of being upgraded to 25,600 channels in 64 "super groups"
of 400-ch each. Actually, there is no limit to the
number of channels possible, but 25,600 is a common
yield from 128k x 8 SRAM chips.

You may have been thinking of the PRO-2042 which
comes with 1000-channels and is expandable up to
16,000 channels or more.

Are you for real? You think it's OK for a police officer to break the law? You think it's OK for a police officer to hear you give your credit card number over the phone for a mail order? You think "Big Brother" should be able to listen to private conversations at will? Even the Supreme Court said wiretaps can be used only as a last resort. Does your employer know you are this ignorant? You are a pushover of the worst kind. Like it or not, there are a lot of dishonest police officers out there hiding behind a badge who would love to know you are leaving town for the weekend. I just don't believe you really think that. OH, I get it, you are just trolling and I fell for it, HA HA HA jokes on me!

Sorry you are wrong they would not have to wire into your coax

It's
> a whole bunch cheaper to pick a lock while you're gone and see what's on
your
> scanner than it is to buy a truck load of equipment and track your useage
for a
> week.

The header is "can a scanner be detected" it is not "can the guy down the
street tell what freq I am on".

They could bribe your neighbors or buddies (or maybe just strike up a
> friendly conversation with them!) and find out what they want to know about
> what you brag about.
> It takes a LOT more sophistication to detect those tiny signals 200 feet
away
> than it does to detect them when you're hard wired together as in the 2
scanner
> example!

Try reading that post again no one said anything about them being hard wired together and no it does not take a lot of sophistication to pick up a weak signal 200 feet away.

> The whole thing boils down to this - If somebody thinks they can make enough
> dough by knowing you have a scanner and what you listen to, they will spend the
> effort to find out! If the cops think you are doing something worth knowing
> about with your scanner, they will expend the resources to find out! 99.99% of
> us obviously aren't learning anything profitable or extreemly dangerous with
> our scanners, hence it makes no economic sense for anybody else to spend the
> dollars to find out what we are listening to!

Economic sense A goverment that would spend 8 million dollars studying cow farts and you do not think the can detect a scanner in a house

>Follow the money is what they say
> & I bet most of us don't have or handle enough to attract any attention at all.
> Million dollar secrets attract half-million dollar efforts to learn them!
> If you have any, I suggest you hire some serious security to protect them.
> Neutrodyne
>

So once again the answer is yes it can be detected. It brodcasts a freq (so does your computer, tv, stereo, vcr, regulated power supply, microwave, printer, blender, microwave, toaster, fan... get the drift)

From: jeffreyh@Hawaii.Edu
Message-ID: <6h1u1h$hk8@news.Hawaii.Edu>
Source record: 163405
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

Archive-name: radio/personal-intro
Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists
==========

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Don't get the RS counter. It's not made to pick up signals from a distance, and it doesn't have a capture mode. For a good cheap freq counter, get the Opto Cub for $150. I have tried both, and I returned the RS model the same day I bought it. It's just not made for snooping. My Cub picks up all kinds of useful stuff, and is very small and portable.

Scott, I have used a glass mount before, and it worked okay, but the signals I was getting were pretty strong. When I finally ventured to a more remote area, there were signals that I couldn't pick up at all with the handheld antenna that I could with the glass mount. Now, I can't compare it to a roof/trunk mounted unit, but it was better than the handheld, probably because the radio was down between the seats & the signals weren't really reaching it.

Did I miss something?
When did the new bill make it through the rest of congress?
The previous law only made it illegal to disclose what you heard to an
uninvolved party.

the limitations only apply to "operator select" scanning. If you set your scan groups using the
motorola program as "mode slaved", you can have a different set of 16 scanned modes for each
of the 128 available modes in the radio. It requires a lot of forethought, but does open the range of
scannable modes to 128 X 16 (ok, less a bit of fiddling around).

I've been watching, quietly, for the last week now, quite amused at
Toilet Boy. I must agree, he definitely must enjoy some flavor of
S & M. All his posturing, his new persona, reminds me of a wolf
in sheep's clothing. It's a new spin on an old tale; it's still our
reviled Toilet Boy. He's full of his usual denials, and double turns
about wanting a more positive group, but, it's still Toilet Boy.

I'm enjoying that it's costing him so much in repeated setup fees each
time he tries to scam a new account with Sprint. I offer this theory

as to why he keeps signing up with them.

Toilet Boy knows he's been caught dead to rights on all his lies, forged postings, and rogue cancels. He must save face *at all costs* even if it means repeated setup fees from Sprint for multiple reactivations of his account. He must maintain the appearance of having a Sprint account continuously active to give the impression he is invulnerable and he can do anything he wants with impunity.

As stupid as Toilet Boy is, eventually, through repeated experience, he might learn just how scorned and reviled he has become on the Internet. He just might learn that even in a virtual sandbox, he must learn to play with at least a modicum of civility. He just might learn that people *will* fight back. He just might irritate someone who is quite capable of giving the discussion a *very* personal touch. I don't think telling them to "look it up in DejaNews Fool" will protect him then.

1498. Cellular receive on Standard Radios

Newsgroup: rec.radio.scanner
Date: 1998-04-15 00:00:00 UTC
From: cuyamaca@hotmail.com
Message-ID: <6h3va5$329$1@nnrp1.dejanews.com>
Source record: 163419
Cross-posted to: rec.radio.swap,alt.radio.scanner,rec.radio.scanner,alt.cellular

If you have a C510A, C568A, or C5900 Standard you can receive cellular. Tune to 938.000, select 30 khz steps, and tune around. If your listening to 938.000 on the Standard it is actually -46.105 mhz below what is displayed which would be 891.895 mhz. A little bit of simple math and you can figure out what frequency your listening to. These of course are images, but they are dam strong and can be heard even without an antenna. The audio quality is excellent. The -46.105 mhz offset tracks through the entire cellular band. One important note, select the 30 khz steps after you've found an active channel otherwise you may end up tuning in between channels and not hear much. This may work on other Standard radios too.

The RS counter is good for what it is made for. Capturing frequencies is not what it is made for. You would need to be very close to capture a frequency on the test equipment.

David-
From what I remember, scanners are illegal in Mexico. I don't
know if this is just for resale or for possession. If they were legal,
then I think that there would be quite a few unblocked AOR, Yupi, etc
scanners coming over the border every day. Be sure to check very
closely on the laws though before trying to precede with this plan.

All,
I was wondering what would be a good scanner for a beginner to scanning. I'm interested in a portable scanner
that cover the major(more interesting) frequencies. I realize Cell freq's require modification, and I'm really not interested in them right now, so that's not a big factor. I just don't want to be stuck listening to baby monitors only because I bought a cheap'o scanner for $50.00, know what I mean?

Basically I would like a reliable scanner with decent frequency coverage at a reasonable price. All input appreciated.

Thanks in advance

Vince

Cynically, MAlexder inquired:

Will the coverage that PC devotes to this new scanner be commeasurate with the amount of advertising dollars Sony spends? Big add=lots of coverage? No ad=rehash the press release?

> wide. Oh well.

While I haven't checked my 2035/2042 manuals, the Tandy web pages list
the 2035 as triple conversion(1st, 2nd, 3rd IFs listed with separate 3rd
for WFM vs. AM/FM) :

http://support.tandy.com/support_electronics/doc16/16919.htm

while the 2042 only lists two IFs :

http://support.tandy.com/support_electronics/doc31/31528.htm

Looks as if the 3rd IFs might have gotten accidentally deleted from
the final print master.

I live near Albany, NY and listen to the Albany Police and Fire. They have two systems I guess according to what they tell me. I put the two systems in and most of the time it works fine. However some days I go to trunk track and I

only get the Albany Public Works and Street Depts etc. No police or fire but sometimes later in the day I try it again and its fine. I am a bit confused and am
looking for help re this Either e mail me or post to group would be appreciated.
Many thanks

>A nearby repeater is on a 400 foot tower. A 50 watt mobile can use that
>repeater reliably in a 20 mile radius, and can "hilltop" out to about 50
>miles.

There is also a formula which gives you a very rough approximation
of coverage based on antenna height alone, but doesn't take into
account frequency, power, or terrain.

You take the height of the antenna in feet and double that figure. Then
take the square root of that to find the radius in miles. For the above
example of the 1400 foot antenna height you get a figure of 53 miles,
and for the 400 foot antenna you get 28 miles. As you can see, the
correlation is close enough to give you a rough idea of coverage.

Best regards,

David Patterson davidp@mindspring.com

So I could use a frequency counter to find emmisions of receivers? or even
better, a spectrum analyzer? could I attenuate the emmisions of a typical
receiver by wrapping the unit housing with tin-foil? or do the emmissions
mostly come from the receive antenna?

Of course the FCC has no jurisdiction over e-mail.
And Reed Hundt, Jim Quello and Rachel Chong left the Commission
last year.
A visit to fcc.gov will list the current commissioners,
whose staff(s) would certainly treat any such forwarded
mail with the same contempt we all have for similar SPAM.

1537. Re: Your favorite TOP TEN FREQUENCIES

Newsgroup: rec.radio.scanner
Date: 1998-04-15 00:00:00 UTC
From: Tork <tork@cts.com>
Message-ID: <01bd6883$ba8f4d40$77a0d8cc@tork.cts.com>
Source record: 163527

Here is my location and my top ten, 33.205 N, 117.353 W,&#65533;Grid Square DM13,
Oceanside,Ca USA

1. 155.055 Oceanside PD Dispatch
2. 159.165 Oceanside FD Dispatch
3. 154.095 CHP (highway patrol) mobile extender, I know when a CHP unit is around that way.
4. 450.7125 "Airwatch Traffic) Traffic
5. 156.800 Marine Channel 16, Calling Distress
6. 163.625 Border Patrol Chula Vista
7. 146.730 Palomar Ham Repeater
8. 147.195 San Diego County RACES repeater
9. 447.800 .70 cm Ham Repeater (they have it linked to a HF ,high Freq, on top this mountain. So they can use a little hand held and talk to the WORLD!)
10. 138.600 Camp Pendelton (Marine Base) Federal Fire Dept.

That's my top ten. I use a Yaesu FT-50R dual band 2m/440 with wide band receive, with an extended "Hot Rod" antenna. Happy scanning,

David Torkelson
KF6DGN
33.205 N 117.353 W&#65533;
Grid Square DM13

Bill,

According to Sprint Passport Security, Mackey has been SPANKED several
times now. He must really be into S & M because he keeps coming back
for MORE.

This must really be costing him alot of money signing up over and over
again!

Regards,
John

1541. Re: To the person who thought scanners aren't detectable...

Newsgroup: rec.radio.scanner
Date: 1998-04-15 00:00:00 UTC
From: Pushpendra S Khaira <singhpk@ix.netcom.com>
Message-ID: <3534ED4C.5373@ix.netcom.com>
Source record: 163531
Cross-posted to: alt.radio.scanner,rec.radio.scanner

While, any superhetrodyne receiver can be detected
by the radiation generated by the Local oscilator or the
PLL VCO(voltage conrolled oscialttor) (called LO hereafter)

There are anumber of caveats:-
1. Most scanners (can and DO)use 2nd,3rd or 5th harmonics of the LO.
So, an user listening to 800MHZ, is probably having an LO tuned to
168.54MHZ or SO.

168.54*5 = 842.7

with an IF of 10.7, so our scanner listener is actaully listening to

842.7 +_ 10.7 832MHZ or 853.4.

WHILE OUR DETECTIVE SNOOPER ASSUMES THAT HE IS LISTENING TO 157.84!!!

2. The LO radiation can be very small for well made radios.
It may indeed be very small for triple conversion radios
with a first IF of 300 MHZ or. In that case, the LO will be
300 MHZ or so OFF. So, if you are listening to 530 MHZ, the LO will
be at 830 MHZ.

AND our detective snooper will be be assuming that the user is
listening to 830 +10.7 = 840.7 MHZ!!!

3. All those NAZI stories may be true, but they involved REGEN radios
that can be made to oscilatte ,if, too much reaction was used.
Then these could cause radition right on the DOT. (no IF to +-)

So, detection is possible, but it may be unconclusive until U can
actually find more details about the scanner like IF frequencies,
etc etc

ALL FLAME to >> /dev/nul

The antenna

John,

Why can't you tell the truth?

Accordning to Sprint Passport Security, you've already been booted
from Sprint (SPANKED) several times in the last week! The Sprint
folks are very puzzled as to why you keep signing up with them over
and over again? It most be pretty expensive!

Regards,
John

Can anybody send me some freqs to listen on for a day at the ballgame?
I am basicly looking for anything good to listen to at or around the
stadium. (Parking, security, vendors, teams, wireless mikes)

To be fair to non White Sox fans, does anybody have anything good for
Cubs games too?

Thanks.

Yup, that's a bummer how our Congress equates
scanners to assault rifles.

> installations overseas? Thanks for any info....

You can get anything overseas and it is not likely
to conform to US law. Neither is it likely to
conform to our bandplans, like 30 kHz steps for
cellular, but yes, you can get unrestricted radios
from offshore.

It is probably illegal to bring them into the
USA, however. If you do so, you run the risk of
the equipment being confiscated and you prosecuted
as a smuggler.

I don't know of this having been done with scanners
yet, but it was a commonplace thing in Citizens Band
for a time. Lots of people bit the dust and did
jail time or paid fines of $20,000/up for contraband
radios.

Scannists are doing it with impunity right now. It's
to be seen how long that lasts........

I though you were supposed to cut the wires going to the speaker. This changes the ohm load and the microchip gets data too quickly so it covers the 800MHz range before it can block it...

I am interested in obtaining any frequencies, especially UHF-AM Air, for either the Davis-Monthan AFB or Tucson ANG facilities. I have quite a few as it is but would like assistance in building the list even further. The 12th AF HQ is now located here so any frequencies from their prior location could be usefull as they may be in use here.

Thanks,
Wayne

These were in my notes, I have not heard them myself, but it's a starting
point.

GO GO White Sox:
151.685, 461.200, 462.8125, 464.7500, 461.1625,
460.450 Chicago PD Zone 13-District 9

HOLY CUB:
463.5875 Parking, 464.5875 Operations, 469.3125 Admin.,
464.525 Vendors, 151.625 Ushers.

My
Notes: 154.600 is always a good bet at most sporting events.
151.625 has been a good "Blimp" frequency in the
past.

If this thread interests you, try to find the book "For Services Rendered" by David Kwechanski. It's the true story of an RCMP officer who worked for many years looking for Russian spies in Canada during the cold war years.

A standard RCMP counter-espionage trick was to park radio receivers near Soviet embassies, to determine the IF frequencies of the embassy radios. By knowing what frequencies the Russians were monitoring, the Mounties knew which coded messages transmitted from Moscow were destined for Canada. They also used this technique outside private residences to determine that individuals suspected of being spies were in fact monitoring Russian coded transmissions.

Most bizarre of all, they put receivers in aircraft and flew around trying to detect and triangulate the locations of IF emissions on frequencies being used by the Soviets.

Don't believe me, read the book!

That can be demonstrated to be untrue through methods available to any of us.

Why is this so difficult for people to understand? Most receivers generate RF energy of varying amounts, detectable at varying distances. I can jam my TV from across the yard with a scanner. I can also jam an AM radio signal on, say, 1380, by tuning around 940 kHz. You can all prove it to yourselves.

Moreover, that technique is actually USEFUL! If you have a shortwave radio without SSB capability, you can use a second SW receiver to produce such a signal and thereby tune in the SSB signal.

1568. Mod for REALISTIC PRO 35 or Uniden 100xlt??

Im wondering if it is possible to do a mod to my scanner. It is a REALISTIC PRO 35 and I believe it is same as Uniden 100xlt.

When battery gets low.............warning symbol appears but SOUNDS STOP! NO sounds can be heard until new batt put on.

Can this be changed so I HEAR ALL sounds until battery switches off, Usually a minute after BATT low appears and usually at a vital bit of info comes over radio.

PLEASE EMAIL ME!!!!!

Sheesh! This would be so damn funny trying to imagine... IF I hadn't
actually tried it myself... to send a *stable* FSK signal from a
Radio Shack DX-360 (all AM analog, no BFO >$99 SW receiver) into
a MFJ-1225 RTTY interface...

Folks, do not try this for digital... it's strictly a voice sort of thing.

Hi,

I would like to purchase a handheld receiver and Icom's R-10 is the one I am interested in. Does anyone have it? What is your experience on using it? Does it have back-light support so you could see the display at night, and how long does the battery last?

Please let me know where I could purchase it at lower price. So far I find out that it costs $399.99 at Amateur Electronics Supply (www.aesham.com) and $419.99 from Ham Radio Outlet (www.hamradiostore.com). Both prices are after the $100.00 instant rebate.

I got my 2035 service manual today. TP2 is the 455 KHZ narrow FM
discriminator output.
In theory, you might have better luck at the last 10.7 MHZ crystal filter
output, before the 10.7 MHZ wide detector & tuning around 10.7 MHZ on your
short wave. Tapping the point might screw up the squelch if you select wide
function on the 2035, but if you switched it out when using wide and used
another mode in the 2035 when trying to get ssb, it should be OK & the squelch
should still work.
If you hook the shortwave in after a detector, all you are really tuning
is bleed-through (unless there was a signal multiplexed - you might get 960 MHZ
point-to-point microwave signals by tuning ssb from 0-1 MHZ on the demodulated
signal at TP2 or by tuning 10-11.4 Mhz at TP2). I don't know if any of those
are still in use, but I used to fix the "microwave" links ten years ago.
You might also consider tapping near the output of the AM IF 455KHZ filter
and tuning the shortwave to 455KHZ (some have a birdie there).
If/when I do any experiments along these lines I'll try and write them up
```

here. I am also planning on trying to add additional ceramic filters on the wide IF (10.7 MHZ) to see if I can help the wide FM be just a little narrower than it is (about 6 FM broadcast channels wide on the strong ones!).
Does anybody know why RS didn't claim triple conversion on these radios? The owners manual only lists the first 2 IF's, but there is a third IF frequency in every mode - 455 on AM a separate 455 on FM narrow & 10.7 on FM wide. Oh well.

I got email from Ceraldi, indicating he didn't know it to be true, but
claiming to recollect reading about it in an article about a month ago, that he
"got from bob paragnes."

I'm making a database of frequencies for cordless phones, not just all the
frequencies, but a database where you can specify a model number, and get
a list of the frequencies for that particular model.

1583. Your favorite TOP TEN FREQUENCIES

Newsgroup: rec.radio.scanner
Date: 1998-04-15 00:00:00 UTC
From: ED BOE <edboe@ix.netcom.com>
Message-ID: <353456EA.1253788D@ix.netcom.com>
Source record: 163573

Last week a thread was started on the topic, "what we have heard on the
scanner".

This week why don't we do:

Our "Top Ten Frequencies", favorites that we listen to.

Let's keep it to ten for brevity, and because some people new to the hobby still do buy 50 channel scanners.
This will give them something to chew on.

Let's give our "top ten" and the geographical location we are listening
to and if the frequency is unusual, why we listen to it.

472.0375 LifeStar Med Helicopter
442.9750 Amateur Radio Severe WX Net/ARES
463.5500 Chicago FireNet
155.4750 ISPERN- IL State Police Emergency Radio Net
154.9950 Cook County Sheriff Band 3
154.2650 Fire Mutual Aid-NIFERN- North/West Suburbs
154.2800 Fire Mutual Aid-South Suburbs
154.1300 Chicago Fire Department-F1
453.7000 IL. Dept. of Transportation Patrol
155.4600 IL State Police HF4

These freqs are from the Chicago, IL area. There are many others of
course and my favorites change, but today this is what I'm listening to.
How about you?

Smacksie can't post anything BUT drivel because
he has a hole in his lip and can't even hold
spit in his mouth for more than a few seconds.

He doesn't want the thread to die because he
can't get attention in any manner other than
by exhibiting himself and acting like an Adam-
Henry.

The ironic thing is that it isn't *acting* exactly.
But then poor Smacksie has many unfortunate handicaps
and birth defects. Ferinstance, have you heard how
he was born without eyelids?

The list of his misfortunes is endless......it's
no wonder he's the way he is......

Look at it this way: what's the objective?
To autoprogram the scanner, right?

Well, a $5 roll-your-own cable and a freeware
program can sock 400-freqs into that scanner
in about 45-seconds. So why pay $129 to do
the same thing?

Not a chance. Smacksie just wants attention. He
desperately wants to be admired for being such a
fine specimen of humanity.

> What do you think? I say we give him a chance to prove that he wants to
> change.

Well, Smacksie can change any time he wants to whether
we give him a chance or not. At any time, he can revert
to posting ON-TOPIC and ignoring everything that's OFF-
TOPIC. And there ain't a thing e can do about it, if he
were to choose that.

Smacksie is a poor unfortunate victim of
a bad gene pool, syphilis, herpes, chankroid,
crabbes, and birth defects. After his momma
gave birth, they kept the placenta and threw
away the baby as the choice of two evils.

Plus the fact that the poor fellow has a bad
case of Eye-rectitis. You know....where the
optic nerves get crossed up with the rectal
nerves and give a shitty outlook.

Nobody's actualy hostile to Smacksie....he just
wants attention, so people give it to him. He
kind of enjoys pain....S&M, you know.....

I've tried several, with varying degrees of success. Basically if
you're in an area where the signal you're trying to get is quite
strong, you'll have no problems. You'll definately pick up a far
better signal than you will simply trying to use an aerial inside the
car, and IMHO it's well worth trying.

From my experience, trying to pick up any Lo band stuff is hopeless.
Other than 'scanner' aerials, you can also buy 70cm/2m Ham Glass Mount
aerials, which offer a good compromise between the 140 and 400MHz
bands, any offer better results over those two bands, but are rather
average on anything else.

They're both a brialliant scanner, and a bad scanner in one. Compared
to my Yupi 7100 and AR8000 there are a few cool things it does neither
of the others do and it's nice and small. However it's biggest
disadvantage is scanning speed, a 12 yr old Pro portable I have here
scans faster!

For a great review on this and other scanners, check out Rich Wells
site, www.qsl.net/n2mca

Translation: GeoVet, and all the Cheek-a-likes REALLY REALLY REALLY wish that John Mackey NEVER changes his colors, 'cuz then they will be wrong. They will need to find a new scapegoat, and worst of all, they would need to find new ISP's to complain to on a bad day.

'Sides, do you REALLY think sprint is going to shut him down? Read 'recurring monthly revenue'

THIS, from a man who berates "off topic posts", in fact, in a post dated just a few days ago, he tells Mackey to "ignore" off topic posts, and that "that is th ONLY way" for this ongoing spat to end.

Sounds like a man who practices what he preaches - NOT!

When are you Cheek-a-likes going to wake up and smell his poop? To think people actually SUPPORT a guy like this!

I know, I've heard it all, but they are really PORR excuses for supprting a man who just WON'T GIVE UP!!

Mackey, Cheek is one of these children who needs to have the last word.

In fact, all of his Cheek-a-likes are just like him. You've made a good effort, now sit back and let those fools have those last words, and to be sure, insecure petty children like them will REVEL in the 'last word' so there will be LOTS of them. Go have a latte' and let them play.

Children will be children (talking about the Cheek-a-likes, guys!)

Source record: 163649

yes $98 USD payment is usually the way to overcome these limitations.
while i admit that it seems expensive...when u compare with similar software
for example pioneer hill stuff at 299+++USD and does a few functions more.

so if its software u use why not support it so the author can continue the
further
development and implement some of the other stuff in the works that he
mentions
on his homepage i.e. psk/fsk demod anaysis etc.

if it was crap i would not bother to add my 5 cents worth but its a nice
peice of software
for those of us that use this type of analyser and is certainly better than
and more useful than some
equally good but low featured software like spectrogram etc.

i have not registered it yet myself but intend too as i am looking forward
to the future features.

Paul Giusti VK3FPG and keen ute dig monitor

i am in no way connected or receive any favors from the author of
analyser2000. my opinions are
of a user that likes this software :)

Folks, this is exactly the sort of abuse which gives this hobby a bad name. I suggest you write to your local newspapers and talk about the good things you do with your scanner.

If you don't write letters, you have nothing to complain about when your "representative government" enacts laws banning the monitoring of "out of band" transmissions. This is how S___ Happens.

I suppose you've already seen this but Opto's Scout goes for $349 and
$799(onsale) for the Explorer. These prices are inline, and most
resellers should be selling them at the same, LIST price.... is this
what you found?

These prices are direct from optoElectronics.

and the Scout at $349 is a good deal. I paid $499 for mine.

Keith

Virtually everything the M-450 does (and more) can be done with Free
software (freeware) readily available over the internet, i.e. POCSAG,
DTMF,ACARS,WeFAX. I have various pieces of software on my laptop that
perform each of these functions by proccessing input to the soundcard. Try
doing web searches on these software names:

POC32 (POCSAG software)
WinTone(DTMF software)
WACARS(ACARS software)

Wintone is not free, but a mostly functional shareware version can be
downloaded for free.

The duration of the signal is definitely why you cannot pick up those types of remotes. The signal strength with a remote RIGHT next to the scout would be sufficient for hit. The duration is the problem, even though some will appear that they are transmitting continuously, but they arent. The LED might stay on, but they are short individual signals. You can see the "receive indicator" on an opto scout flash once for each pulse.

One coherent signal is simply not present for the minimum sampling time required for freq. counters to detect the freq. in use.

yeah I second this man's opinion. The RS counter is real junky for
detecting signals like handhelds, etc etc. As a table counter, it would
probably be all right. The CUB is a good product. I happen to have a scout
but the CUB has the same receive capaibilities but lacks alot of storage
beep/vibrate modes, etc. Another person mentioned that you had to be
right up on the transmitter to get a hit. Considering freq counters
are designed to be nearfield receivers - this is a good thing. As long
as you understand how to use a counter, where you can use it, and set
your expectations correctly - you wont be unsatisfied with the cub.

If you have another $200, but the scout. I love mine.

Keith

Glenn Highcove (glenhigh@ucla.edu) wrote:

Afraid you are behind in the times. The PD software and associated hardware are passe'. POC32 is freeware available on the net. It uses the soundcard input of your computer (or the serial port ,if you prefer). It autodetects baud rate. It is a Windows95 application with a VERY nice user interface, and it is EXTREMELY reliable. You use the Windows soundcard audio volume controls to set your levels (the program has an onscreen level meter that makes this VERY easy. Peter Baston's PD204 was OK during its time, but has gone the way of the dinosaur.

Hey guys,

Which FCC freq database software is the best? There are a couple ones I've seen like Grove, percon, etc. Anyone we recognize to be leaps and bounds over another? I'll go check their web pages(if I can find them) and compare... I'd appreciate input from anyone whose already bought one of them.

Thanks in advance.

I'm going to guess "$75.00 per 100'" is a typo. You meant "$75.00 per 1000'", I'd guess. I don't know of any magical properties to Grove's cables. I prefer the quad-shield, direct burial RG-6 as issued for satellite TV use, which is nearer the cost of Grove cable than garden variety RG-6, but I don't think that is what he supplies. The good stuff has foil 100% shield plus multi-stranded wire shielding which helps maintain shield integrity when flexed, and also handles current better (like induced surges which I'd just as soon have go to ground rather than blow through the foil & get on the center conductor!).
But I'm sure the connector installation is done by certified connector installers & quality control is exhausitve for the extra money Grove charges....

I meant for the extra switching to be attached to the memory chip mods. Perhaps it's clearer out by itself, but at any rate, that is what I intended.. That's why I think the OS535 is superior for MOST users who want extra channels.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1997 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant

max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.
1142 N. Gilbert St.
Anaheim, CA 92801
tel. 714-991-1580

International Crystal Mfg Co.
11 N. Lee Ave

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies
is the Police Call Plus, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic

front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

Illinois, 61937. |

April 26 (Sun): Kewanee, IL. Area Amateur Radio Operators |
Tail Gate Party, Kewanee Moose Hall on Route 78, (North side |
of town). 9:00AM until 3:00PM. NO CHARGE TO COME OR SELL! |
50/50 Raffle tickets $1.00. Door Prizes. Radio Shack will |
be present with specials. A few tables are available on a |
first come first served basis. Some electricity available. |
Flea Market outside only. Bring your own tables or tail |
gates. Breakfast and Lunch Concession Operated by the Moose |
Hall Breakfast served 7:00AM to 12:00 PM, Lunch from 12:00 |
to 2:00 PM. Talk-in on 145.490 - 88.5 PL. Please bring |
Ham ,Computer, and Electronic related Items. If it doesn't |

sell, please take it home with you! Take Interstate 80 to | the Annawan exit Route 78 South to Kewanee. Moose Hall is | Approximately 1/2 south of city limits. From Interstate | 74, take route 78 Exit North and follow Route 78 to Kewanee. | Route 34 & 78 from the south, follow route 78 north. Route | 34 from the east follow 34 to junction of 78, (downtown | Kewanee), Turn right, (North) follow 78 to site. 3 Camp | Grounds within 10 miles: The Timber Camp Ground, Johnson | Saulk Trail State Park Camp ground, Francis Park Campground. | Not Responsible for Accidents or Lost Items. Info: contact | Bill Anderson WB9TEW, Email: bill@inw.net. Snail Mail: 103 | South East 2nd Ave. SE 2nd Ave. Galva, Illinois 61434 | Twisted Pair: 903-932-3023. |

MAY 1998

May 2 (Sat), Cedarburg, WI - Ozaukee Radio Club Swapfest, For Information Contact O.R.C. Swapfest Committee, W58 N985 Essex Dr, Cedarburg, WI 53012-1439 or call Gabe at 414-377-2784 between 6:00 and 8:00 PM.

May 3 (Sun), Sandwich, IL - Kishwaukee Amateur Radio Club Hamfest, Sandwich Fairgrounds. Admission $6. Ends at 2 PM. Talk-in 146.73 MHz. Info: Bob Yurs W9ICU, phone 815-895-3219, email: N9ZNA@AOL.COM. see http://tbcnet.com/~jleonard/hamfest.htm (Nice mid-sized ham-fest out in country. Lots of tailgating. Few commercial exhibitors. Always a good time. Fairly good restroom facil-ities - AJ9S).

May 15 - 17 (Fri - Sun), Dayton, OH - Dayton HamVention

JUNE 1998

Jun 7 (Sun), Princeton, IL - Starved Rock RC. info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341. tel. 815-795-2201 (Usually an excellent hamfest. Unlimited space outdoor flea market, some indoor space, though few big name commercial vendors. Crude restroom facilities. - AJ9S)

Jun 14 (Sun), Wheaton, IL - Six Meter Club of Chicago. info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Ave., Downers Grove, IL 60516-3925. tel. 630-963-4922

JULY 1998

Jul 12 (Sun), Peotone, IL. Kankakee Area Radio Society. Will County fairgrounds. info: Don Kerouac, K9NR, 6311 East Flora St., Kankakee, IL 60901. tel. 815-939-7548, E-mail: k9nr@juno.com.

Jul 19 (Sun), Sugar Grove, IL. Fox River Radio League. Waubonsee Community College. For tables, tickets, and

information: contact N9UZC James E. Von Olnhausen, n9uzc@amsat.org, (630)-879-3042, FRRL, Box 673, Batavia, IL 60510-0673. (good, small to midsized hamfest. Modern rest-room facilities. - AJ9S)

AUGUST 1998

Aug 2 (Sun), Peotone, IL. Hamfesters Radio Club. Will County fairgrounds. info: Dave Brasel, NF9N, 6933 West 110th St., Worth, IL 60482. tel. 708-448-0580 (Usually an excellent hamfest - AJ9S).

Aug 23 (Sun), Woodstock, IL. Tri-County Radio Group. McHenry County fairgrounds. info: Bob Grosse, N9KXG, PO Box 3107, Skokie, IL 60077-6107 tel. 708-944-0500. E-mail: tcrg@hotmail.com, http://quality-enterprises.com/tcrg/ (fairly good, small to mid sized hamfest - AJ9S).

SEPTEMBER 1998

Sep 19, 20 (Sat & Sun), Peoria, IL. Peoria Area ARC. info: Jim Williams, N9HHU, Box 3508, Peoria, IL 61612-3508. tel. 309-692-3378. Fax: 309-698-8643. E-mail: jimeoc@worldnet.att.net, http://www.w9uvi.org

Sept 26, 27 (Sat & Sun), Grayslake, IL Chicago FM Club. Lake County fairgrounds. info: Mike Brost, WA9FTS, 5127 North Monterey Ave., Norridge, IL 60656-3245. tel. 708-457-0966 (the biggest and best hamfest in northern IL - AJ9S)

OCTOBER 1998

NOVEMBER 1998

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (847)974-3123. See http://www.gicancomputershow.com

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a

flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the

microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd

electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna

Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the

scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 fee for 200 hours use of the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83
and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Mar 1997 - RELM MS-200 mobile
Apr 1997 - RCA RP-6150 portable

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong,

causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring

Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by

reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob.

Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature

identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual

band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked

out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner

with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes

on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked

systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an

optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Model	#chan-nels	VHF low	VHF high	UHF scans?	lock-outs?
FR104	6	X		no	
FR105	6	X		no	
FR2512	24	X		no	
FR2513	24	X		no	
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough

condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard

or $34.95 for deluxe RadioMap report with histogram.
Include your name, address, and telephone number, along with
center location (nearest intersection of 2 streets, or
latitude & longitude) and mail to: Bob Parnass, 2350 Douglas

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each,
but you must know the patent number. Credit card orders are
taken over the telephone by the Assistant Commissioner for
Patents at (703)305-4350. Alternatively, you can mail a
check or money order, made payable to "The Assistant
Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark
Office, call their automated information message system
toll-free at (800)786-9199.

There are various patent servers on the world wide web,
including IBM's server:

1641. FS: AOR AR-950 100-channel w/ Cell RX receiver

Newsgroup: rec.radio.scanner
Date: 1998-04-16 00:00:00 UTC
From: Joe N0IAT <joentam@yahoo.com>
Message-ID: <35368811.D0E10AFD@yahoo.com>
Source record: 163329
Cross-posted to: rec.radio.swap,rec.radio.scanner,alt.radio.scanner

Hi Folks,

I have an AOR AR-950 100 channel programmable communications receiver
for sale. This is an "unblocked" radio which was manufactured and
purchased just before the ban on radio receivers which cover full
800-900 Mhz.

Features include:
100 Channels in 5 banks of 20
AM/FM selectable modes
Scan/Delay/Search functions
DX/Local attenuator switch
This is a "mobile/base" scanner, not hand held.
Excellent RX sensitivity, especially 800 Mhz band.

Freq coverage:
==============
29-54 VHF-lo
118-136 AIR
138-174 VHF-hi
408-512 UHF and T-band
806-950 Cellular Phone, Trunked, Conventional 800 etc
==============
The radio has selectable steps - 5/12.5/25/30 Khz stepping.

Included is the original box, manual, styrophoam, mobile bracket,
DC wall power supply, auto power cord, 2 antennas, and radio.

Cosmetic condition is 8 to 9 out of 10. Only light scratches are
where the radio connects to the mounting bracket.

Electrical condition is 10 out of 10. This receiver is far more
sensitive and selective than my PRO-46, especially 800 Mhz band.
Original price from ACE $329. Asking $200 and I'll pay shipping.
Reason for sale: have an AR-3000 and dont need to receivers. This
one is seldomly used now.

Email if interested. References available.
Joe

1642. HELP: Need 48V 40A supply for MRF154 power amp

ECPA is strictly an American thing. There are no such laws anywhere
else in the world restricting receiver coverage. You can buy an 800MHz
scanner anywhere in Europe, Asia, Africa and Oceana and it will cover
the North American Cellular band.

Importing such an item into the USA is probably illegal. However, I've
never known of anyone being charged for importing an illegal monitor
receiver. I've had my car turned inside out by American customs one
time (only one time, honest) and they overlooked my off-road exhaust,
250W CB booster and bastardized TRC449. I don't think they really care
to be honest with you. Now, I wouldn't recommend packing that cellular
capable scanner in amongst a bunch of Beanie Babies.....8-D

There are a few places to either get a replacement or to have new batteries put back in the battery pack. MetroWest and Mr. NiCad are a few places that others will mention. I have also seen a place advertised in Nuts & Volts magazine called PrimeCell. They also have a website at http://members.aol.com/primecell/primecell.htm. You can buy the replacement pack to go into the scanner's battery pack, or you can send it in to them to have it done for about the price of the batteries. There are also NiMh cells available for the BC200xlt that should give you about twice the use of the originals for around $22. I have not had any experience with this company and have no ties to it. Just thought I would point it out as an option.

Hi,I went in my AOR 950 last nite to add a output jack for this interface im still working on.First thing I noticed was that the list by B.C. was incorrect on the chip number(I hope!).The list said look for ic#MC-3361n.I couldnt find it anywhere inside.I did locate a TA-7761P(listed for a AR-2500).I hooked the wire to pin 9 of this chip.I cannot test yet,but was this a good idea?Has anybody ever done this to this or anyother AOR scanner?

Also.I found about five unsoldered connections on the top side of the board.I fixed these up and buttoned it up.Guess what?It now works GREAT.All the channels I thought I lost because I moved down the basement,now come in perfect.I'm glad I looked.Has anybody noticed this with AOR scanners?

TIA.....Jerry.

1657. Re: BIT RATE

Newsgroup: rec.radio.scanner

From: Beaker <nospam@for.me>
Message-ID: <6h6hvd$2hk@examiner.concentric.net>
Source record: 163345

If the data rate is slow enough, you CAN use hamcomm, but not in the normal way. You have to use the spectrum display rather than the built in bit-rate counter. The only problem is that the data rate must be around 1200bps or lower for the simple hamcomm decoder to "see" it. Another problem is that not all signals in the VHF/UHF region use simple FSK modulation. These are harder to visually detect the data rate.

I haven't seen any software to do this other than using a real spectrum analyzer.

Picked up a Saiko SC 292 mobile scanner at a hamfest a few weeks ago, but I'm having a few problems. It's a very interesting scanner(covers 26-30, 68-88, 118-178 & 380-512MHz), and I would like to get it running again. First, I can't find any info on this thing anywhere. Second, the LCD display is dead, and when I tried to fix it I may have made it worse. So, I am looking for schematics, a users manual, and/or contact info for the manufacterer(Saiko... Anyone ever hear anything about them?). Any comments or suggestions on this radio or general radio/LCD display repairs would be appreciated. If I can't get the display/keypad to work, I'm thinking maybe I can setup a remote head for this thing. It only uses maybe 10 or so wires to conncet the radio to the display part. Is that worth trying, or should I just scrap the thing for parts?
TIA & 73's

1666. AMTRAK ON BOARD FREQUENCIES

Newsgroup: rec.radio.scanner
Date: 1998-04-16 00:00:00 UTC
From: brian.johnson@thekat.cts.com
Message-ID: <9804161201021106@thekat.cts.com>
Source record: 163354

Does anyone have the on board frequencies used by the AMTRAK crew and conductors as well as other personnel that are used on the San Diegan from San Diego to Los Angeles or Fullerton? I would also like the frequencies that are used on board by these people from Fullerton, CA to Albuquerque, NM. I tried all the Burlington Northern/Santa Fe/ATSF frequencies from my data base but couldn't hear a peep out of the conductors on my hand held (PRO-30). I would appreciate your research on this and the results.

Thank you
Brian

I've notice that the M-400 (earlier version) may cause interference and degrade signals, particularly in the VHF-lo band and military air band. I suspect that the 400 generates considerable RF and it can vary depending on what operating mode it's set for. Try moving it away from your radio and be sure to use a shielded connecting cable. Good luck.

The original law passed in 84 with a somewhat recent
addition.......90's early.....that made Cordless and baby monitors
illegal too.

The BC9000XLT's finite image rejection is not surprising.

Aaron Ceraldi is incorrect. I did publish a BC9000XLT virtual
downconversion modification in 6/96 Monitoring Times,
but never speculated on Uniden's intent.

Yes, I've heard that. It is very good for making on the spot readings of equipment. I did not want that, and I went for something that had more of a parabolic effect, which could allow me to capture freqs more discreetly. However, the large display on the RS freq counter makes it excellent for technical uses (which is what freq counters were originally for anyway.) I'm just not into that part of monitoring. Sorry it sounded like I was putting down the RS counter.

Probably not a bad price. $150.00 got you the scanner and nothing more than
the scanner. Alkaline batteries or NiCad needed to be purchased separately.
Leather covering, AC adapter, DC adapter all sold separately as well.
Speaker quality is poor in this radio and so another accessory could include
the external speaker, also sold separately. If scanner comes with all
accessories as seller states it does, $200 seems fair to me.

Oh yes, the self righteous WILL prevail, we will NOT beovertaken! We are the SUPREME BEINGS, we know ALL that is best, why we'll SWEAR (quite literally) to defend that which we stand for!!!

Go back to your BIBLE!

You'd think they would red tag his credit card account number when
they shut him down, then, when he tried to sign up again *that* card
wouldn't work. He'd run out of credit cards after a while.

Read "legal exposure" if they don't take measures to stop him after
being informed of his activities. Rogue cancelling of other people's
posts for content is universally regarded as unacceptable. The
evidence against him is damning *despite* what he says. The clock
is ticking.

==========

900 MHZ BAND FREQUENCIES

Many of today's 900 MHz cordless telephones offer digital encryption
or spread spectrum technology. Either of these systems will render
the reception of the conversation by an ordinary scanner impossible.

Taken From Panasonic KX-T9000 60 Channel Model

Base: 902.100 - 903.870 Base frequencies
Handset: 926.100 - 927.870 Handset frequencies

(30 kHz Spacing)

CH	BASE TX	HAND TX	CH	BASE TX	HAND TX	CH	BASE TX	HAND TX
01	902.100	926.100	21	902.700	926.700	41	903.300	927.300

The questions keep coming up, different laws are mentioned, and most replies are of the form "I'll do anything I bloody well please and no law can stop me". The following is a short dissertation on the various laws and their effect.

The laws of the United States, passed by Congress, are codified as the United States Code (USC). It is divided into titles covering various subjects. Title 18 includes the criminal laws and penalties; Title 47 covers telecommunications. A law can be refered to by its original name (i.e. "The Communication Act of 1934") or its entry in the USC. A specific section would be refered to by title/USC/part/section, i.e. 47 USC 605.
To carry out the law, the various government agencies create regulations, which are codified as the Code of Federal Regulations (CFR). It is likewise divided into titles, with the FCC's rules in 47 CFR.

18 USC 119 bars the disclosure of any electronic communications to which you are not a party (with certain legal exceptions), and sets the penalties. 47 USC 605 (the Communications Act of 1934) also bans the disclosure or use of third-party communications. With minor changes, this has been the law for 60 years.

In 1986 Congress passed the Electronic Communications Privacy Act (the ECPA), which added definitions to the law that banned listening to cellular telephones. It also banned the monitoring of broadcast auxiliary, SCA and scrambled signals.

In 1992 Congress passed the Telephone Disclosure and Dispute Resolution Act (TDDRA), which instructed the FCC to ban the manufacture or import of scanners capable of receiving cellular. In accordance with this law, the FCC modified 47 CFR Parts 2 & 15, effective 26 April 1993. Note that this does not affect the sale of such scanners, so long as they were made or imported before the cutoff date. It also does not bar individuals from modifying their receivers.

On 25 Oct 94, the Digital Telephony act was signed. Buried in one of the additional sections was a change to 18 USC 2510 & 2511 that added cordless phones to the original ECPA ban on receiving cellular.

In short:
It is illegal to manufacture or import cellular-capable scanners.
It is illegal to listen to cellular (and cordless) transmissions.
It is illegal to divulge any communication to which you are not a party.

Now, please - we all know the first two are: 1) stupid; 2) unenforceable; and 3) widely ignored. It is not really necessary to post the obvious to the whole world (unless you have an irresistable urge to demonstrate even less sense than the legislators who enacted them).

> or low power?

It's a combination of the extremely short duration of the signal and the
low power. Given that the counter I have is rated to detect 5 watts at
50 feet, it's not too sensitive. I expect that's to prevent overload of
the receiver.

The Radio Shack counter(I have the older model) is indeed handy as a test
device, but as a frequency gathering device, it is rather limited.
As for improving it:
A amp can be added to the front-end, but if it is not done properly, the
results may not be optimum.
As for hold-a manual hold is VERY easy-one of the test points pulled to
ground through a low-value resistor with a small switch is all that is
needed.
If the proper signals are available on the board, then just a bit of cheap
logic could be used to make an automatic hold (AKA capture mode).
I've never looked to see if those signals are available though.

I owned an Opto freq counter some time ago and also found that you had to be right on top of the signal to capture the freq reliably. In urban areas, the counter would pick up all sorts of random frerqs and proved to be completely useless. I suppose that if I had used antennas cut for the specific frequencies that I was searching for, it would have greatly improved the results. In surburban areas, it was a bit better. If you pulled up behind or alongside a car in which the driver was using a cell phone, you could capture the freq (you added 45 MHz to the actual reading on counter or something to that effect, I recall). Eventually, I sold it.

Not having used one of these in particular I can't say for sure.
However, the coupling between the set's antenna and an induction loop is
going to be shitty at best. Factor in the loss in the coax - but
hopefully the gain of the antenna, and the end result will probably be
slightly worse than sticking your base unit at the same height as the
range-extender's antenna.

I've *heard* of some crazy fool hacking his phone and splitting the Rx
and Tx input/output. He built an amplifier that produced about 4Watts
and ran separate Rx and Tx antennas - both with lots of gain. The plumb
crazy thing *allegedly* worked 5 miles up the road!

By his own admission, it was a lot of work and he wouldn't do it again.
This is especially true as there are long-range cordless telephones
available all over the 'net. Check out...

I just went there and the phones looked interesting. But getting 30kM out of a VHF handheld device? You'd have to have the receiver at your base, I guess, and a good antenna. Do they connect to your regular phone line like a repeater?

1727. STEALTH Mobile Scanner Antennae

Newsgroup: rec.radio.scanner
Date: 1998-04-16 00:00:00 UTC
From: stmagnum@aol.com
Message-ID: <1998041616400900.MAA28642@ladder03.news.aol.com>
Source record: 163492

I've tried a few mobile scanner antennae of the "STEALTH" variety, with very little luck. I was no impressed with the good ol' FM splitter that uses your existing car antenna. Grove's No-Tenna wasn't much better, either. I'd rather avoid those on-glass cellular look-alikes.

I realize there is a tradeoff here: reception for "stealth." But I'd like to get the best reception possible (without spending an arm and a leg for a Sti-Co) without looking out of place in a shopping mall parking lot. I'd rather not have my car look like a porcupine and draw unwanted attention.

Has anyone had any experience with any other type of hidden or stealth mobile scanner antenna?

Thanks!

Does make one wonder what "all accessories" means....maybe even the cable and software required to program the scanner...maybe even the cassette adapter, or even a mono-to-stereo adapter. Could mean just about anything. And it may not even still be available at RS...another factor to consider. Lots of variables. So many questions...so few answers...such is life.

Even at $200, with or w/o "all accessories", it's a great scanner, and I love the programability!

1733. ***HELP NEEDED: Anyone with Motorola MT1000 Knowledge and programing Software****

Newsgroup: rec.radio.scanner
Date: 1998-04-16 00:00:00 UTC
From: Mason Storm <vio_storm@usa.net>
Message-ID: <6h5htl$q1n$1@news1.icx.net>
Source record: 163498
Cross-posted to: alt.ham-radio.vhf-uhf,alt.radio.pirate,alt.radio.scanner,rec.ham-radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.scanner,rec.radio.swap

I am looking for a version of the MT1000 software that is a pirate version
that The tech at Motorola use:
I got another radio software from them that allows out of badsplit reception
and Transmission, and
allows actual full VHF Transmision. I need this bad, and if anyone knows how
to dump and or reset
the CPU in one that would be helpful also. I tried to program one and the
radio locked up while
loading to the prom, I can still use my other MT1000, read/write, so it is
no the rib. anyways
it is locked up and says 88 on the lcd. ANY IDEAS?

Thanks

M. Storm

>Pros and cons? You mean features or using one? If it's features here what
Tandy says:

PRO-2042 Programmable Scanner
(200-0464) Features Faxback Doc. # 31529

The new Radio Shack PRO-2042 1000-Channel Programmable Home Scanner lets
you in on all the action! With its convenient rotary tuner and keypad, you
can quickly tune to over 196,000 frequencies (within the ranges of 25-1300
MHz) that include those used by police and fire departments, ambulance
services, aircraft communications, amateur radio services, transportation
services, Citizen's Band and commercial FM and television broadcasters.
You can select up to 1,000 channels to scan and you can change your
selections at any time.

The secret to your scanner's ability to scan so many frequencies is its
custom-designed microprocessor - a tiny, built-in computer.

Your scanner has all these special features.

Hyperscan - lets you scan up to 50 channels per second
and search up to 50 steps per second.

Weather Band Key - scans ten preprogrammed weather frequencies
to keep you informed about current weather
conditions.

Ten Channel-Storage Banks - you can store 100 channels in each bank to
group channels so calls are easier to
identify. The scanner automatically warns
you if you try to store duplicate frequencies
(except when storing frequencies into
channels from monitor memories).

100 Monitor Memories - temporarily save up to 100 frequencies
located during a frequency search, letting
you move selected frequencies to permanent

channel storage later.

Priority Channel - you can set the scanner to check one channel every 2 seconds so you do not miss important calls.

Auto Store - quickly finds and automatically stores active frequencies in each channel, then searches for additional active frequencies while skipping previously stored channels.

TAPE OUT Jack - lets you connect an optional tape recorder to the scanner to record transmissions.

Rotary Tuner - lets you manually tune and select desired frequencies or channels. The scanner's tune speed automatically changes depending on how fast you turn the rotary tuner.

Two-Second Delay - delays scanning for 2 seconds before moving to another channel, so you can hear more replies.

Memory Backup - keeps channel frequencies stored in memory for up to 3 months during a power loss.

Lock-Out Function - lets you set your scanner to skip over specified channels or frequencies when scanning or searching.

Frequency Sort - lets you sort frequencies stored in a bank from the highest to the lowest or the lowest to the highest frequency, to help you organize stored frequencies in your scanner's memory.

Ten preprogrammed Frequency Ranges - let you search for transmissions within preset frequency ranges or within ranges you set, to reduce search time and select interesting frequencies more quickly.

Direct Frequency Search - lets you search for new and unlisted frequencies.

Sound Squelch - keeps the scanner from stopping on frequencies with only a carrier signal and no voice or other sound, so you can hear only calls instead of static.

Backlit Display - makes it easy to view and change programming information.

Two Power Options - let you power the scanner from standard AC power (with the supplied AC power cord), or

your vehicle's battery (with an optional DC
cigarette lighter power cord).

WARNING: To prevent fire or shock hazard, do not expose this product to
rain or moisture.

Your PRO-2042 scanner can receive all of these bands:

25-28 MHz (HF Hi)
28-29.7 MHz (10-Meter Amateur Radio)
54-72 MHz (FM-TV Audio Broadcast, Wide Band)
72-76 MHz (Land Mobile Service Band)
76-88 MHz (FM-TV Audio Broadcast, Wide Band)
88-108 MHz (FM Radio Broadcast, Wide Band)
108-136.975 MHz (Aircraft)
137-144 MHz (Government)
144-148 MHz (2-Meter Amateur Radio)
148-174 MHz (VHF Hi)
174-216 MHz (FM-TV Audio Broadcast, VHF Wide Band)
216-224.9875 MHz (VHF Hi, 1 1/4 Meter Amateur Radio)
225-399.9875 MHz (Military Aircraft)
400-450 MHz (UHF Lo, 70-Centimeter Amateur Radio, Government)
450-470 MHz (UHF Lo)
470-520 MHz (UHF "T" Band)
760-805.9875 MHz (UHF "T" Band)
806-823.9875 MHz (UHF Public Service)
849.0125-868.9875 MHz (UHF Hi)
894.0125-956 MHz (UHF Hi, 33-Centimeter Amateur Radio)
956-1300 MHz (Private Fixed Services, Paging, Aircraft Navigation,
Experimental, 23-Centimeter Amateur Radio)

Your scanner can receive these preprogrammed weather channels:

161.650 MHz
161.775 MHz
162.400 MHz
162.425 MHz
162.450 MHz
162.475 MHz
162.500 MHz
162.525 MHz
162.550 MHz
163.275 MHz

FCC NOTICE

Your scanner might cause TV or radio interference even when it is operating
properly. To determine whether or not your scanner is causing the
interference, turn off your scanner. If the interference goes away, your
scanner is causing it. Try to eliminate the interference by:

Moving your scanner away from the receiver.

Connecting your scanner to an outlet that is on a different electrical circuit from the receiver.

Contacting your local Radio Shack store for help.

If you cannot eliminate the interference, the FCC requires that you stop using your scanner.

This device complies with Part 15 of FCC Rules. Operation is subject to the following conditions:

(1) This device must not cause harmful interference, and

(2) This device must accept any interference received, including interference that may cause undesired operation.

SCANNING LEGALLY

Your scanner covers frequencies used by many different groups including police and fire departments, ambulance services, government agencies, private companies, amateur radio services, military operations, pager services, and wireline (telephone and telegraph) service providers. It is legal to listen to almost every transmission your scanner can receive. However, there are some transmissions you should never intentionally listen to. These include:

Telephone conversations (either cellular, cordless, or other private means of telephone signal transmission)

Pager transmissions

Any scrambled or encrypted transmissions

According to the Electronic Communications Privacy Act (ECPA), you are subject to fines and possible imprisonment for intentionally listening to, using, or divulging the contents of such a transmission unless you have the consent of a party to the conversation (unless such activity is otherwise illegal).

Radio Shack encourages responsible, legal scanner use.

tvine@teleport.com (PjB) wrote:

> And for the record, I dont know what either of you are talking about with
> this bud powell thing.....try again later.

So you're a liar, then. There is ample proof that
you are forging or faking an ID. First let's look
at yours and toejam@teleport.com (aka BudPowell's) headers:

NNTP-Posting-Host: 204.202.166.32 Same
X-Newsreader: Yet Another NewsWatcher 2.1.8 Same
Paths: nntp.teleport.com!
192.108.254.39.MISMATCH!
news2.teleport.com!not-for-mail Same

Now the above are sufficient to show that "Toejam"
and you are the same idiot, BUT let's look at one more:

Message-ID: <toejam-1704980023050001@pdx48-a48-19.teleport.com>
Message-ID: <tvine-1704981207230001@pdx48-a48-19.teleport.com>

You frigging imbecile, the two messages originated from
the SAME MACHINE !!!! And you don't know anything about
"Toejam" or "Bud Powell"? I bet your ISP can tell....

A report of your forgery or fake ID is being sent to your
ISP....for the sake of posterity, if nothing else.

> Replying to another off-topic post? Your just keeping the chain going
> over and over, and its not just you, its also that other mackey dood,

And......YOU. And Queenie. And Rimmy... and others.
It's ALL a matter of freedom of choice. You exercised
yours. Others exercised theirs. So quitcherbitchin.

> which I don't know who the hell he is.

An idiot is all. The newsgroup idiot.... every NG has one.
He's kind of like a mascot for the NG.

> Anyway, I'm getting tired of sifting thru all the BS posts
> about you and mackey.

So? Don't sift through them. Don't even download
them. It's a free country. You can pick and choose.
Or can you?

> Is anyone else?

I don't know. Some, maybe. Especially those who
don't know how to control their own computers.
Some people like to come off as "victims". You
know what I mean?

> Should we just start another newsgroup and cut you guys out?

Sure. Go ahead. You got my blessing. Who
is this "we" anyway?

> We'll have to name it something wierd,

More "we"? Who is "we"? Who do you speak for?
Did they give you a Power of Attorney?

> so you dont come and post bullshit in it.

But it's okay for you to post bullshit here?

> Its nothing personal,

Oh of course not.

> but both of you act like little kids, back and
> forth bickering and flooding my newsreader off-topic posts.

WHO is BOTH? I haven't talked to your nephew
in a couple of weeks now. He got kicked off his
ISP for utter idiocy anyway. As for your newsreader,
I appreciate the flowers, but I really can't control
it. Obviously, though, you can't either. That's
a very sick problem, I'll concede, but there isn't
anything I can do about it. Unless, of course, you'd
like to pay me ..... you know, retain me to solve your
problems. Then, maybe....

> Why can't both of you resolve whatever your arguing about

I did. Mackey is gone now. For a while. He got
a Size #13EE crosswise on his sweet patooty. The other
guy I was talking to is "Queenie". He's our religious
counselor. He walks and talks with a deity and
receives guidance from on high as to how to judge who
is going to heaven and hell. But Queenie abuses that
power, so I abuse him. It's no big deal. You're not
a part of it and you don't have to read it.

> I hope you don't take this in a bad way,

Oh hell no, of course not. Very objective and constructive.

> but I'm getting sick,

Oh oh. Would you like to have some Pepto-Bismol?
Do you have a lower or upper gastric disturbance?

> and I guess I could just leave this newsgroup.

Wellllll, like I said...it is a free country.

> Or maybe you'll start attacking me for what I just said.

Huh? Not me, pal. It's a free country. You can say
whatever you want.

So can I. I don't generally open the ante, though.
I just raise it when the bets come around to me.
Talk to me decently and on-topic, and I talk decently
and on-topic in return. 50-50 deal.

> I don't know but I reeally haven't seen anyone say
> much about both of you arguing on this newsgroup,

Ohhh, they like it, too. You're one of the few who
haven't learned how to harness and control their
computers yet. One of these days, when you tell
that hoss who's boss and reign it in and make it
behave, then you won't be so sick.

> probaly because their afraid you'll do the same to them.

Huh? I have yet to be able to spit tobacco juice into
anyone's eyeballs from my workstation here.

> P.S. And I guess you could call this post off-topic also,

Yes, I guess you could.

> but I just had to get it out in the open.

Is that because you aren't in control? You just HAD to?
I'm afraid I don't understand..... Is someone threatening
you with a Size #13EE crosswise unless you do it?

> You'll hear nothing more from me.

Like I said....it's a free country. So far, anyway.

You wouldn't happen to be a part of the conspiracy to
rip the freedoms and liberties away from this country,
now would you?

Ohhhhh hellllll no, of course not. Right?

CB Guy.....That's Mackey you're talking to. He's donned RADIOFOOL, compania,
& Rick from AOL among others. Same grammatical errors and improper syntax.
It's really a hoot when he screws up his tenses and slips up by refering to his
forged identity in the third person.

He really doesn't have a choice, he's got to get his support group from
somewhere.

Hey Mackey, why don't you really confuse us by turning on your CAPS key? Do
that "Rick from AOL" thing again.

If you aren't having any luck getting filters to work for you, try this:

Read the friggin subject line before you open the message.

If the subject line sounds like something you don't want to read - keep your little mouse cursor away from the friggin message.

You *do* understand that you're under no obligation to read every message on the newsgroup. Don't you?

Complaining about the 20 to 30% flame traffic in the newsgroup is similar to complaining about a snake bite after deliberately
offering your hand to the reptile.

It's kind of stupid.....Don't you think?

obfd@aol.com (OBFD) wailed and grunted:

Richard Kendrick wrote:
> >...He just might learn that people *will* fight back.

> Oh yes, the self righteous WILL prevail, we will NOT be
> overtaken!

Ah, my doltish friend, you have totally missed my point. You have made an assumption about my thought process and motives which is erroneous. I will explain it so that even a mental deficient like you, will grasp the concept.

My statement was not about self-righteousness (yours or mine), but, a reference to an historical event very close to home. You remember the incident a few months ago involving two individuals from rec.radio.cb? I'm speaking of the one where a young man allegedly sold a radio over the net, and the buyer felt cheated cheated enough to mail a pipe bomb to the young young man and kill him. When the bomb exploded, the boy's mother, who was standing a few feet from her son at the time, was maimed in the explosion.

Now, here is the parallel between that event, and your beloved Mackey. The seller had gained a reputation as being an extreme nusiance in the newsgroup as well as a liar. Apparently the young man had insulted, aggravated, offended, and lied to enough people. The scorn received by this young man rivaled that which Mackey has earned. Finally, someone went to an extreme, and killed him. I'm not saying the boy deserved to die, but, he did peeve a lot of people, just like Toilet Boy.

I'm not suggesting that someone in the scanner groups is seriously contemplating assassinating Mackey. However, several people have publicly stated that they'd eargerly like to beat him severely about the head and shoulders. What I am suggesting, based on my observations of people, is that no matter how docile or pacifistic someone might be, eventually, they *will* fight back. Your beloved Mackey finally pushed enough people to their personally defined limits, and they fought back in their own way. In my opinion, when people defend themselves from scumbags like Mackey, that doesn't make them self-righteous. It means they still possess their own sense of value and dignity, and are they unwilling to allow themselves to be abused. Those kinds of people earn my respect. Cretins like Mackey only garner my contempt. Sycophants like you who condone the

behavior of the Mackeys of the world will always share in that public and overt contempt. As far as I'm concerned, you and Toilet Boy can consume fecal matter and perish.

> We are the SUPREME BEINGS, we know ALL that is best, why
> we'll SWEAR (quite literally) to defend that which we stand
> for!!!

A typical war chant of a raging xenophobe.

> Go back to your BIBLE!

My previous statement had nothing to do with the Bible. But, if you must, the Bible is easy (even a little boring) to debate. If you *really* want to test your intellectual mettle, let's talk about the philosophy and ideas of Bertrand Russell. What say, Opie, do you have the cerebral gonads? Or, are you just a twittering and toady buffon, like Mackey?

1752. ARTCC Frequencies for Washington Center?

Date: 1998-04-17 00:00:00 UTC
From: Bro <cipher@mcn.org>
Message-ID: <35381A92.A336D368@mcn.org>
Source record: 163218

I downloaded POC32. I found a signal that was identified by several users of the group as a pager signal. When I tuned to it the POC32 program got nothing. I sent the wav to the guy who wrote POC32 with the simple question "Pager?" and he replied "That's a funny joke." I noticed the buad rate max was like 2400 or something, and I though pagers were supposed to be like 9600. Is there a better program for me?

You should be alright if the FCC ID is AA020-300, if it was AA020-300 then you wouldn't be able to open up the full 800MHz range, the 54-88Mhz, and do the shortwave mod. Also look at the Model No. on the back plate. It should be 20-300. If it is 20-300A then it is not capable of ALL of the possible mods. Still a great scanner...especially for that price.

Wiggie

So what?

Who said anybody
>is underpaid - I said the poster was stealing the saleperson's time and
money
>by returning something that had NOTHING wrong with it aside from the fact
that
>he found a new toy.

Big deal again, the man gets a better deal, so he takes it. I wouldn't call
it rude, but clever.....

The salesman could have been selling something to somebody
>who wasn't playing little boy games on somebody else's nickel.

Like he wants to be selling stuff to any body, the man would probably rather be at home. But any way, isn't it the salesman's job to care for the customer, who always comes first?.....

Then he posts
>it on the net and wants me to applaud him.

ME to applaud him? ME?

Do you suppose the guy told the
>salesman he just wanted to play with the PRO-64 for a few weeks while he looked
>for something else? #

He wasn't looking for something else, but he found it by luck, so what's the big deal?

Just because Radio Shack employees work for low wages
>doesn't give one a license to insult them and lie to them and then brag about
>how cool one is for doing it.

I agree, but he is also right, let the salesman go somewhere else if he doesn't like being underpayed, and as I understand, the United States customer to salesman relationship is that the customer is ALWAYS right!

> If you want to be a bigot, go right ahead. It is easy to throw around
>insults and call names here. I can't imagine you would think this was such a

>Can someone tell me where the Radio Shack PRO-2006 is manufactured ?
>It may be marked on the box or in the manual (I have access to
>neither).

The PRO-2006 (and 2004/5 before) were manufactured by GRE in Japan.

It is still distributed in Europe by Altai under the Commtel badge - as
the Commtel 205. It would appear though as with many GRE produced sets
now these are manufactured/assembled in China. As to whether it is GRE
directly or some "sub contracter" I don't know.

Hope that helps.

1765. Why recommending Winradio to others is not in their best interest

Newsgroup: rec.radio.scanner
Date: 1998-04-17 00:00:00 UTC
From: Victor Healey <fourphun.hates-spam@bellsouth.net>
Message-ID: <KbHZ.2667$Yd.2027455@news2.atl.bellsouth.net>
Source record: 163253
Cross-posted to: alt.radio.scanner,rec.radio.scanner

From back in Sept 1997 Boot Magazine page 48 under "Optimizing for Performance" said,
ISA is and old decrepit bus whose day has passed. It only persists because of legacy peripherals such as sound, SCSI and modern cards (and I might add WindRadio)." By removing all ISA cards and adjusting the PCI Latency Timer higher then 32, which you can't do with any ISA device in your computer, BOOT pulled and extra 10% to 15% performance boost out of their DREAM MACHINE 97. http://www.bootnet.com/youaskedforit/dreammachine.html

If you have a dual purpose PC that includes games, that boost can translate into playing a slug verses something that is acceptable especially with the WIN 95/98 generation games which are big on multimedia. That is also why Creative Labs has moved off the ISA bus to PCI with their new products just released this month. Look at the April / May magazine reviews of all new sound cards - no new ISA cards - they are all now PCI. 3comn is moving from ISA to USB for their USR modems (the high end voice/fax USR modern now shipping already has USB). SCSI is already a no brainer for those who need it. WIN 98 B3 which I am running supports USB. The new PC 99 industry spec has ISA completely removed from it.

Basically what I am pointing out is any one who has one multipurpose machine that plans to run the latest and greatest software should not have any ISA cards in their PC since ISA handicaps it so badly. That is why the Winradio (ISA) is not currently a good choice for some. The alternative choice from ICOM moves performance issues outside of the PC and it benefits from new options already shipping in where you can even have a serial device (ICOM PCR1000) hooked up to a USB to serial converter in the USB daisy chain. Can't you now discern why recommending Winradio (ISA) to others is not in their best interest?

Have you noticed the ones who shout the loudest about Winradio have a vested interest in selling them? It is sort of like the tobacco companies IMHO. Their interest in making money out weights their interest in telling the public they will be hurt by buying tobacco. They actively oppose and try to suppress that bad news.

Now here is another tip from my WEB research that may knock the socks of some. I predict that Intel's new Celeron may really cripple AMD CYRIX and such socket 7 vendors. Why? The mainstream press is panning the Intel Celeron. I didn't consider even looking at one for my next PC until until I read "Tom's hardware page" http://www.tomshardware.com a long article discussing
CPU Performance from Socket 7 to Slot 1 which DR TOM just posted today April 16, 1998.

excerpt from http://www.tomshardware.com/cpubench.html ...
Intel Celeron - The New Gaming CPU of Choice, Overclocker's Dream

Most of the press doesn't like the Celeron, but this seems to me mainly due to the old fashionedness of the journalists who write about CPUs. As a matter of fact I really do like this CPU and I am absolutely sure that it has a good position in the market place. Celeron's lack of a L2 cache is the reason why it doesn't score high in office applications. However it pretty much performs as well as a Pentium MMX 233. The powerful FPU of the Deschutes core is responsible for a gaming performance which is far ahead of any Socket 7 CPU, including even overclocked Pentium MMX CPUs. This makes it a very cheap CPU for excellent game playing. Now since this CPU is targeted for the home market we shouldn't emphasize on the office application performance. How fast do you want to run your spread sheet or Winword? Does it make a difference how fast the CPU is waiting for the next user input? I dare doubting that. Everything in the PC business is revolving around 3D nowadays, e.g. the next Intel CPU core 'Katmai' will mainly enhance 3D gaming. So what is wrong with a CPU that doesn't score astronomical Winstones, but scores excellent Quake II scores?
The biggest beauty of Celeron however is how wonderful you can overclock it. My Celeron runs up to 400/100 MHz flawlessly!!! Is that surprising? No! The most touchy thing of a Pentium II is not the core but the L2 cache. Celeron doesn't have any, which makes it overclockable up to 50% of its official clock rate. Even if Intel should disable higher multipliers, Celeron will still run 350/100, because it's the same multiplier as used for 266. My Celeron runs with multipliers of up to x5. So if you want the most fps per buck, go and get a Celeron. Buy a cheap BX board that offers you 100 MHz front side bus if you're really crazy, or get a really cheap EX board with sound and VGA onboard, add a Voodoo2 card and you've got a cheap and powerful Quake II station.

The Celeron offers by far the best gaming performance for the money whilst also offering a satisfying office application performance. If you're into overclocking you will love this CPU.
....

Basically what he is saying is that knowledgeable gamers who want the 'biggest bang for the buck' may flock to the P2 266MHz Celeron and an Intel chipset (EX LX BX) on a slot one mainboard. This is very bad news for those hopping to sell legacy socket 7 ISA-compatible boards. This is very bad news for non Intel CPU makers. Look for a firestorm in various usenet groups and the press when others realize this. Remember this is only day two of the Celeron's release. <wink>

The P2 266MHz Celeron is already selling for less then $200 from some vendors. http://www.pricewatch.com
I think I may build one of these this weekend just to see if it is so. That is if I can find 100 MHz SDRAM (8ns) at a good price locally. It will definitely not have any obsolete PC system performance robbing ISA cards like Winradio in it!

S N I P
Both AMD and Cyrix are still developing chips that use "Socket 7". AMD's
K6-300 will work on a 66MHz bus with w 4.5 multiplier. I haven't been
able
to find specs for the Cyrix chip. With new chips like this coming out, I
think ISA-compatible boards will be around for a while.

I found that the 2042 received far too much intermod.

So I sold it and bought a 2045 with a tone board.

What a great move.

I like the 2045 so mcuh that I sold my 2006 as well, in my opinion the 2045 beats them both.

Hi Vince,
What do you consider "reasonable"? My definition of reasonable is
probably not the same as yours; especially when you consider today's
models go from about $100 to $600.
Radio Shack has the PRO-64 on sale for about $170 which is a great
deal; if you can find one to cash in on it. It covers the basic bands
but omits UHF aero, FM radio and TV audio.
RELM also sells a nice unit...the HS200. Has roughly the same
coverage
as the PRO-64 and can be had for around $200 if you look around.
Sony is soon to introduce two new radios that will cover everything
from 25 - 1300MHz(minus cellular of course) with wide-FM as well. Prices
on the entry model should be in the mid to upper $200s. You might want
to wait a bit and see what the word is on this radio.
You might also want to check into the new TrunkTracker radios. Radio
Shack did have their PRO-90 on sale or you could go with its Uniden
equivalent, the BC235XLT.
I have more details and reviews of these radios at my web site(except
for the upcoming Sony SC-1) so you might want to poke around there a
bit.
Best of luck with your decision!

> bought one of them.

Hi Keith,
I've played with Grove, PerCon, FRS and ScannerBase. I haven't
used Mr. Scanner at all.
FRS is extremely flexible and powerful but probably has the
largest learning curve. It's free though!
ScannerBase is quite flexible and seems to be the up and coming
favorite these days. With the little usage I've given it, I am
quited pleased with the results thus far.
I had the Grove database a while ago when they used the DOS
interface and it was decent. Prices have come down on it
considerably since then but I've no idea if they have improved
the interface or not. At least it's Windows format I think.
PerCon Spectrum is a good value but their search engine and
"ergonomics" leave much to be desired. Their search engine is
far inferior to any of the others listed here.
PerCon Regional has a much better search engine but then it
only covers about a 6th of the US and costs about five times
as much.
Considering this list of players, my recommendation would
be for Scanner Base. For more info and web links, try my FCC
Frequency Database page : http://www.qsl.net/n2mca/FCCFRQDB.HTM
Best of luck with your decision!

The biggest question to ask is what freq's. is your local public safety?
If they are on an 800 mhz. trunked system, you almost have to get a 800mhz
radio, maybe even a trunk tracker, which costs $$$. If not you might be
able to get a cheaper scanner. If you community is not on 800 mhz, and
doesn't paln to move up there, check out the BC60XLT or the BC80XLT. These
would be great scanners, but they don't have 800 mhz, or aviation bands.
You can check where you local police/fire are at the local Radio Shack.
Look your city up in the "Police Call" or just ask the R/S sale person,
he/she might know. You can check out scanners at http://ccrane.com They
have some good info and pictures of the radios.

Installation of the PROgramit interface will solve the problem of
"wearing your fingers to the bone" and won't set you back much at all.
Also look into getting the IR module addition for this and you can
control all aspects of the scanner...even the volume with your TV/VCR
remote control.

The ability to install the OptoScan OS535 interface into this scanner
makes it even nicer. Very fast scan rates and more added features.
Both the PROgramit and the OS535, along with several other mods can
reside easily and happily inside of this scanner.

Can I ask that is the lack of a S-meter on radio shack models a hinderance. I'm a beginner and have a BC895XLT and while im not familiar with frequencies in my area I do look at the S-meter a lot. I just wonder if once you get familiar with scanners, does the significance of a S-meter diminish or maybe visa-versa. Right now Id'e say lack of an S-meter is a con for radio shack.

Of the units I've seen, they don't transmit continuously. Are these the
exception rather than the rule? Possibly - But I have seen at least three
seperate occasions where it is clearly a <transmit><pause><transmit><pause>
scenerio when you hold the button down.

I haven't seen 10-20 brands, but the ones I have seen sure exhibit the
same characteristics.

Have a nice day.

So you are really addressing this post to yourself, ehh Peter The Hypocrite? Typical. Three sentences into a post and your true colors are waving bright and clear. Do as you say Petey.

> and 2) to cozy up to his dream-lover Bill Cheeks, who soundly thrashed
> Hansen several times recently, going so far as to call Hansen a 'crazy old
> fart'. He still smarts from this.

From Bill, most would consider that a compliment. OTOH, what was #1 above? BTW, Bill never offended me nor thrashed me. Funny that you keep bringing it up. Is it another one of your drug induced fantasies Prozac boy?

> And for the record, I dont know what either of you are talking about with
> this bud powell thing.....try again later.

Yea right, a number of people mentioned your stupidity in the operation of your newsreader when you erred and posted as Bud Powell but forgot to change the rest of the identity in the header i.e.; Tvine and PJB. Lie on Peter. It is what you seem to do best. You certainly haven't contributed to the scanner hobby in any shape or form in many many YEARS.

Oh yea, respond right now Peter or Bud or whomever you are today. I command you to respond!

BAWAHAHAHAHHAAHAHAHA!

The meter on the BC895 is useful I guess but I don't pay that much attention to it (I did at first). I also would like to see them on RS models. On the other hand, if you have an RS scanner that can accommodate an interface, you can get s-meter reading on screen. Even then, I don't pay much attention to mine.

Unless I'm mistaken, most Amtrak trains use the road frequency of the railroad they're travelling on, and on-board crews use the same channels so they can keep in touch with road conditions (track warrants, speed restrictions, etc.)

Hope this helps.

I am thinking about buying a base antennae for scanning. I am interested in pulling in distant 800-900 mhz stations. I can pull in these sites at night on my Pro-64 and BC895XLT, but would like to listen during the day.

My neighborhood is not antennae friendly and need to install any antennae in my attic, which is tall (over 8' centerline). I have been thinking along the lines of a discone antennae. Any better ideas/ suggestions?

I was hoping to keep my costs reasonable, less than $100.00. The less expensive the better. Radio Shack sells a discone for about $60.00. Any references to Diamond discones that I have found price about $90.00. If I were to go with a discone, is the additional money for a Diamond worth it?

Thanks,
John Hawkins

A receiver, tune to likely frequencies and listen carefully.

Even old WWII military receivers often included an extra tube to isolate the antenna from the internal circuitry to prevent radiation of oscillator and IF signals which could be detected by enemy receivers.

Modern ESM receivers are much more sensitive, and modern consumer electronics often come in plastic boxes which allow all sorts of radiation out.

I can detect my scanner at several feet with a simple SONY portable, imagine what a professional ESM receiver can do.

I have a commercial software package which encrypts information, and also
wipes all unused space to ensure no traces of temporary files etc. remain.
Strangely it writes "YENGH" repeatedly over all the unused disk space.

Hump, yeah,
I've heard this rumour about 50 zillion times. Sounds as if all three encryption modules have been broken according to the 'information' given below. Someone 'busting' A3, the tree versions of A5 and A8 - I don't think so!
Although I could be proven wrong - as someone who is employed to ensure the security of my clients telephone networks, if the hackers can supply me with some form of proof (DSP code for A5, preferably) of all three algorithims, then I guess I'll be out of a job....

I'm sorry, but my opinion is that this is just a well placed rumor, propaganda if you like, designed to seed misinformation.

Malexder is right, too. You still need a 64 bit Ki and process to become Kc physically held on the SIM card. And there are still some tricks left over, yet.

Besides, GSM isn't a secret, it is an open protocol. Any manufacturer who wants to can get the necessary code required to make his/her own phone/base station/BSC/MSC.

The emissions come mainly from the antenna, some from the oscillator,
but putting tin foil inside the radio won't do much good...
And yes, you could use a spectrum analyzer to find out if and what you
were tuned to...spooky stuff.
I have tried my Cub and my Xplorer on my AR8K and they don't pick up
much.

I do not know of any specific laws but I suspect that scanners would be prohibited in Mexico. Police tend to be very mistrusting and would surely confiscate a scanner and likely impose some type of fine (or worse). If you're caught, don't expect to be treated too kindly.
If you're driving across the border, there should be little difficulty in concealing the radio. Airport customs are a bigger problem. Don't bring any radio that you just couldn't bear to lose, like an AR8000.
Scanning in Mexico calls for discretion. Don't go walking around with the radio in open site. You won't find frequency directories like Scanner Master, so finding active freq's and identifying them will be challenging but fun.
Good luck and be careful.

Pieter, I suggest you build an off-line supply. You can get circuits to do that from many places, notably from those who make the transistors and those who make the drive circuits. Not too complex, either.

Thanks for your interest. The answer to the first question as read off of the manual the freq range covers 25-520mhz, 760-823.945mhz, 851-868.945mhz, 896-1300mhz. The cell mod was done to recover the freq gaps of 824-581mhz and 869-896mhz. Total coverage. You can program and scan 400 different channels. From what I have heard it is a very good radio. I bought it just to say I had one, I never really used it to its full functions. A hobby for cordless and celluar phones mainly. It was fun but I moved on to big computers... The optoscan 456 computer interface board is installed in the unit and works quite well. I scanned a picture of the introduction to the opto456 manual. It covers what all the opto can do. The version of the scancat-gold software is 6.0. I have all the manual's , boxes, paperwork and invoice's as well. The radio does not have as much as a scratch on it. I keep all of my radio equipment in a foam padded hard case. I have invested over $700 in this equipment and it is in new condition, But I am willing to take $500 OBO for all. If you are interested or have
any
questions let me know by email and we'll make arrangements to exchange phone numbers.
Thanks again,
Gene

Got some GOOD NEWS and some BAD NEWS for you...

BAD: Police have recently been involved with using costly high tech
infrared imaging equipment to confirm their suspicions that
someone was growing Pot inside their house.

GOOD: The court ruled that this was an invasion of privacy.

I can imagine that the recent court ruling regarding the use of the
high tech IR imaging equipment must have some bearing upon our fears
with the cops sniffing out our IF circuits.

Message-ID: <3536CC41.2099F96B@bluemoon.net>
Source record: 163372

I have a beautiful Icom R-71A, and it's for sale.
Here is the short list:
It is a Passband tuning model.
I have performed several mods:
Schottky diodes around IF's. (Improves performance).
New tantalum caps. in Display board. New caps. in RF section. New caps. in Audio section. "Drake" stlye passband tuning when in specified filter position. Shielded wiring between RF and PLL sections. " Kiwa" LFH-4S filter added. New bulb in S-meter.
This radio very clean. On scale of 1-10, I'd say 8.75-9.
Asking $500. Will include Service Manual and User's manual. You ship.

Cheers,
Mike Lafferty

1835. FS: Scanner-Computer Interface

Newsgroup: rec.radio.scanner
Date: 1998-04-17 00:00:00 UTC
From: bcheek@san.rr.com
Message-ID: <35358b8f.190796935@news2.cts.com>
Source record: 163377

@cts.com
Organization: COMMtronics Engineering & World Scanner Report
Newsgroups: rec.radio.scanner,alt.radio.scanner

For sale: one CE-232 Scanner/Computer Interface,
assembled, tested, ready to be put into
a PRO-2004, PRO-2005, or PRO-2006. Comes
with detailed 100-page manual and a
Program Disk.

Price: $150 + $5 S&H (domestic/ground)
(normally $194.95 + S&H)
MC/VISA/MO/COD

Quantity: Just one. First come/first served.

Details: This unit was built up especially for an
R & D project and having fulfilled its mission, is
no longer needed. I can't sell it "new" because it
has been in use, but I'll provide an "as new"
warranty with full tech support and other benefits.

The unit is constructed with machine-pin pin-line
sockets for all I/O points, and extra plugs will
be provided to facilitate easy wiring and connections.

This CE-232 Interface is equipped with 22-bits of
user-definable I/O; four User Switches to control
external devices, and ports to access the on-board
8-channel, 8-bit A/D converter.

The CE-232 not only controls the scanner from the
PC's keyboard, but it also AutoPrograms the scanner
from a comma-delimited ASCII text file, and it also
receives and processes data from the scanner; a full
two-way "smart" RS-232 controller and data acquisition
interface for the PRO-2004/5/6 series.

This unit can be installed inside the scanner, or
for maximum flexibility and use with other scanners,
it can be installed in a metal box.

E-mail for details or call 619-578-9247 between
1:30pm-5:30pm, weekdays, PDT.

You realize this is almost 2kW PER SUPPLY? You will need a 220VAC line at
minimum
Somehow I don't think this goes well with the next part, "to power a pair of
MRF154 small signal transistors".

Sanity check fail. Reboot universe.

Why is that, Queenie? I must live in your mind, then.

> > He's NEVER on topic.

> So? This has nothing whatsoever to do with what I wrote.

You don't ever write anything ON TOPIC, much less
meaningful. You're always in the attack mode.

> >2. Why haven't you killfiled yourself?
> > YOU are never on topic.

> That is another of your blatant outright lies.

No, snotwad....I don't lie. I tell it like
I see it. And the FACT is....you are never on
topic. You are always vitriolic; venomous; and
a downright adam-henry.

> Why is it that you never respond to me when I
> point out one of your lies or flaws in your logic?

Two things there. (1) You are usually on my
Shit List and I don't see your vomit, and (2) you
never "point out" anything. You just drop your
drawers and shit at anything that moves.

I took you off my Shit List a while back when I
cleaned it out and forgot to put you back on
when you had gone inactive for a while.

The ironic thing is....betwixt you and Mackey, I'd
take that imbecile any day over you. At least he's
an idiot that can be counted on. You....you're a
slimeball, backstabbing, gutless pile of donkey dung.

Utterly worthless and useless to the nth degree.
Hips and shoulders on a stinkin snake are more
worthwhile than you, Glennie.

At least, Smacksie is the village idiot and good
for a laugh.

> >Just curious? You sanctimonious, pompous,
> >holier-than-thou types always did intrigue
> >the shit outa me.

> I imagine they do. I'm sure you're always in
> search of new material for your act.

Actually, excrement (like you) makes good fertilizer
for the crops. I'm always on the lookout for bigger
and better fertilizer.

Stick it, Queenstrom.....where the sun never shines.
I realize that will be hard to do until you take
your head out, but you better do it before you break
wind and blow your brains out your nostrils.

From: gluechunk@hotmail.com
Message-ID: <6h6qpk$fc9$1@nnrp1.dejanews.com>
Source record: 163383

In the past weeks, I've been comparing a BC3000 and a BC200 and I discovered that the 200 picks up freqs in the cordless range a lot better. Both units are equipped with a telescoping radio shack antenna (the 20-006A). There are many times when the 200 will pick up a call (strong signal, not weak) and the 3000 will find nothing on the same freq. What makes the 200 better able to do this?

Both scanners are cell-capable and I also noticed that the 3000 finds cell freqs a lot better than the 200.

The pro's are multitudinous. The con's are few.

Personally, I hate that wretched vertical keyboard
with the minuscule keys spread all over the front
panel. You peck on that derned thing for very long
and you'll know the meaning of the saying, "wear your
fingers to the bone".

Otherwise, it is an evolution of the PRO-2004/5/6
series - very well made by GRE-Japan, and capable
of some bohunker modifications.

Uhhmm, Bill, I don't personally know you, but I have read your books and love what you do for the scanner peoples, but in the above post you are talking about how he is off topic...Well, aren't you off topic also? Replying to another off-topic post? Your just keeping the chain going over and over, and its not just you, its also that other mackey dood, which I don't know who the hell he is. Anyway, I'm getting tired of sifting thru all the BS posts about you and mackey. Is anyone else? Should we just start another newsgroup and cut you guys out? We'll have to name it something wierd, so you dont come and post bullshit in it. Its nothing personal, but both of you act like little kids, back and forth bickering and flooding my newsreader off-topic posts. Why can't both of you resolve whatever your arguing about at another place? I hope

you don't take this in a bad way, but I'm getting sick, and I guess I could just leave this newsgroup. Or maybe you'll start attacking me for what I just said. I don't know but I reeally haven't seen anyone say much about both of you arguing on this newsgroup, probaly because their afraid you'll do the same to them.

P.S. And I guess you could call this post off-topic also, but I just had to get it out in the open. You'll hear nothing more from me.

Uhhmm, Bill, I don't personally know you, but I have read your books and love what you do for the scanner peoples, but in the above post you are talking about how he is off topic...Well, aren't you off topic also? Replying to another off-topic post? Your just keeping the chain going over and over, and its not just you, its also that other mackey dood, which I don't know who the hell he is. Anyway, I'm getting tired of sifting thru all the BS posts about you and mackey. Is anyone else? Should we just start another newsgroup and cut you guys out? We'll have to name it something wierd, so you dont come and post bullshit in it. Its nothing personal, but both of you act like little kids, back and forth bickering and flooding my newsreader off-topic posts. Why can't both of you resolve whatever your arguing about at another place? I hope

you don't take this in a bad way, but I'm getting sick, and I guess I could just leave this newsgroup. Or maybe you'll start attacking me for what I just said. I don't know but I reeally haven't seen anyone say much about both of you arguing on this newsgroup, probaly because their afraid you'll do the same to them.

P.S. And I guess you could call this post off-topic also, but I just had to get it out in the open. You'll hear nothing more from me.

Go to any Airport that offers flight instruction and purchase an
"Airport/Facility Directory" for the northwest. Cost about $4.00.
Contains data for all communications ,radio navigation, and airports.
It's published in 7 volumes that cover the entire USA. $30 buys the
whole USA. Frequenies in aviation change from time to time , hence
these directories are updated and reissued every 56 days.

BCT-7
This a very sensitive radio and has good audio if you put this radio
on your dash.
The antenna provided is good enough for me IMO.
This radio picks up cell images between 896-915.

The main weaknesses IMO: are lack of controlling the delay feature,
and the lack of turning the priority channls off.

>I am wondering if the detection of radio waves from
>the DPS car radios stuff really works.

Sometimes.
It also gets some false alarms.

I like the radio ,but I'd it would be MUCH better if it had a delay
and priority off option.

I don't have either one (yet), but I KNOW i wouldn't put either in my
"main" machine..
No matter HOW fast the machine is, it's better to build up a 486-50 or
better and run the "radiocard" all by it's lonesome.

No matter how good , you will find that ALL Windows machines crash in
direct proportion to how many "extras".. you add.
Run ONE App.. for the radio, and it shold be stable!

A little bit of looking will get you a complete mid-to-hi end 486 for less
than $150 with monitor!

On 16 Apr 1998 21:46:06 GMT, kamst39+@pitt.edu (Keith A Monahan)
was lurking in rec.radio.scanner, and composed the following
about "Re: Opto Scout or Xplorer":

> I suppose you've already seen this but Opto's Scout goes for $349 and
> $799(onsale) for the Explorer. These prices are inline, and most
> resellers should be selling them at the same, LIST price.... is this
> what you found?
>
> These prices are direct from optoElectronics.
>
> and the Scout at $349 is a good deal. I paid $499 for mine.

Where did you get these prices?

From the Optoelectronics February 1998 catalog:

Scout - $449.00
Super Scout - $489.00
Xplorer - $899.00

>Vic Healey ki4je
>winndixie.hates--spam@bellsouth.net
>ICQ 5148591

One of the problems of PCI slots is that they rarely support "full length"
cards, and to get a decent radio inside a PC, you really need a full length
card. And if you have a system with a PCI video card. PCI network card and
PCI TV card, then quite often, you are out of slots anyway.

If you think that 10% performance is really necessary to get more speed and
performance from your ICOM receiver interface, then feel free to strip out
all ISA devices...

But don't worry, there is soon to be a new external version of the WR with a
much faster and more versatile interface than a clunky old RS232 that
doesn't have to eat up a rare COM port either. Start guessing...

> the 1998 Airshow season yet.
Well, as you no doubt found out, the Grove web site where those things were posted are no more. The following URLs will give you the list of the 1997 observed frequencies along with others noted in past years; this is as good a place to start as any. They were compiled from notes from the Scan-L and Scan-dc lists, local scanner notes and reports to my 2 meter net. The URLs are:
http://www.arrowweb.com/RMM/BLUE.HTM and
http://www.arrowweb.com/RMM/THUNDER.HTM

Of course, we need all the new stuff that will show up, no doubt, during the current season. I believe the season for the Blue Angels and Tbirds starts either this month or next.

Check out what numbnuts here did. This dude had *way* too much time on his hands. (Again, no moral here, just passing along what the Associated Press released Thursday) I don't think the writer of this article had the technical terms quite right; the use of "cordless" and "cellular" seems to be used interchangeably. But numbnuts was undoubtedly dabbling in both. Anyhoo, you get the gist of what he did, but I can't figure out how he did some of things this article describes.

**********START**********

VIRGINIA BEACH - A Virginia Beach man faces prison time for eavesdropping on his neighbors' cellular telephone conversations and leaving harassing and often pornographic messages in their voice mailboxes.

John A. Halstead Jr., 31 pleaded guilty Tuesday to 11 counts of intercepting the phone conversations of others and 10 counts of making harassing calls. He could get a maximum of 65 years in prison when he is sentenced June 1 by Circuit Judge Frederick B. Lowe.

Halstead figured out how to tap into the telephone system's memory so that his harassing calls would continue automatically. Some of his neighbors received up to 40 messages a night.

"Once he got the number to your cordless telephone, he had access to your life." said Sheila Artis, one of Halstead's victims. "I would rather have had someone come into my house and steal from me."

Halstead also discovered telephone codes that allowed him to replace message machine greetings with raunchy substitutes.

"They said things like 'Yo! Yo! Yo! You have just reached the sex hot line,'" said Stephanie King, another of Halstead's victims. "And you could not go in and change it because he put another code into it."

Halstead told authorities he started listening to electronic scanners several years ago to keep up with the activities of local police and fire-fighters. Eventually, he began listening to the channels that picked up his neighbors' cellular phone conversations.

He learned his neighbor's phone numbers by eavesdropping, and the harassment began.

Halstead frightened one of his victims so badly that she called police so they could escort her into her house at night, said prosecutor Colin D. Stolle.

"How he got into the mailboxes, I don't think anyone has an idea how he did that," Stolle said. "I know Bell Atlantic could not figure out how he did it."

Halstead used his illegally obtained information to make a locator map of the subdivision where he lived, showing where the calls were originating. He stuck a pin in each address on the map that made a call.

"Sometimes I could hear someone retrieving messages from their voice mail," Halstead told police. "I was familiar with the system and explored the possibility of accessing other voice mailboxes."

Halstead's electronic pranks continue, even though he is in custody, because he programmed some of the calls to continue without any further effort on his part.

"When I asked him how far in the future he did this, he said the calls would go on for a long time," said Detective J.R. Legg, the Virginia Beach police officer who investigated the case.

********END**********

Wooo-hooooo! OK,.............which one of you rascals is this?
(Relax Mackey.....we all know this ain't you)

You guys are going to love this: THIS GUY HAS BEEN ON ONE OF THESE TWO NEWSGROUPS.

No.....I don't know what his handle is, or what he's posted, but I know he's been here based on the following:

1) This is one lonely son-of-a-bitch with too much free time. (For what it worth; he's likely to be introverted and/or socially inept, but craving attention)

2) This guy was into scanners.

3) This guy captured tones and showed a flair for programming remote devices
to operate in his absence. (This guy had a computer with a modem)

4) This article describes a multitude of different scanner/computer modifications and capabilities that are routinely exchanged on these two NG's every day.

C'MON! You *KNOW* this guy was here!

I can work that Deja News thingy pretty good, but I'm a little weak in tracing down headers. Can any of you match this name up with any activity on these two NG's?

NAME: John A. Halstead Jr.

If so....Repost any of this author's messages. and No...I'm not looking to glorify the guy. But let's face it; it looks like one of our

NG denizens got loose and ran amuck with tips and tricks that are usually learned here.

Someone will probably dig it up anyhow; might as well be us.

So where is it? Did numbnut post?

In THIS newsgroup? No. I'd have to call that
mincing words and beating around the bush.

Now had you gone on to suggest that his mammy and sissy
were some obscure members of the lizard or cockroach
families, then yeah......it would count.

As it is, I have to submit that you've treated the
poor sap rather humanely. I mean, after all is said
and done, a *lot* of people's mothers and sisters are
one and the same. All of Obladee-Fada's family are
kind of connected in that manner. And you didn't
even mention his brother and father.......

No, you will really have to do better to garner
any special attention on questioning his ancestry
and heritage.

Sorry. That's how I see it. I gotta tell it like
it is, man.

> "Been there, done that, didn't ever get kissed"
Stealth2 uttered:

Bullshit, Rat Shacks prices have sucked for 30 years, well above other retailers for simular or even inferior products. I am always returning somthing even if its only one flaw. The botom line is price and features. I have hated radio shack junk for years even a lousy CB a few years back. I too had a new pro34 when they first came out, it was sold to me by an over eager, evasive, body odor reeking rat at the shack. It was a good radio for its day, too much bleed over from chaneel to channel and the case was an easy to scracth or break 1970,s plastic. The fake charcoal finish wore off quicker that a cheap gold watch. It was involved in and accident and I finally got the insurance to give full price paid. I went with Uniden ever since and now use the BC235 best sscanner one could ask for and for less.

Peddle it. It ain't worth much. Hell to
work on; almost impossible to get inside;
and not a heck of a lot can be done to it.

You can stick in an Extended Memory of 12,800
channels if that turns you on. Quite a few
other things are semi-possible provided you
can get inside of that puppy.

Best bet is to sell it to someone who will cough
up some cash. And go get something a little
more up to date.

Looking for a 10 meter FM rig such as an Azden or similar. Physical
condition not important as long as it works ok. Does NOT need to have
a PL tone card since it will be used mainly for simplex operation.
Please state what you have and your asking price please when emailing.
Thanks.

Any firemen out there from Hamden Connecticut that are willing to share
the radio codes for the town? They appear to be similar to New Haven,
but slightly different.

Thanks.

I have been using a glass mounted antenna for about a year now. They are
better than the rubber whip on my AOR AR8000 scanner but not as good as the
big thing I have on the roof on my house.

I have also moved it from my old car to my new car. You can buy a refit kit
which is a couple of sticky pads and is very easy to do.

John.

Hello All

Like I don't have enough toyz yet...8^)
I am looking for comments from anyone who has used
any of the BearCat Detectors mentioned above.

I am wondering if the detection of radio waves from
the DPS car radios stuff really works.
From someone who has used the unit(s).

I am on the road a lot, and would like to add one of
the BCT's my arsenal. If you have one of these detectors
and can give me some insight please post an answer.

Thanks..Richard

I'm going to be moving there in a couple
of weeks. Everything I read says that the
state police are using a tunked system that is
digital.

My question is two fold, 1) does anyone make a scanner
capable of receiving digital, or coming out with one soon?
2) or is there a mod that can be put into a portable trunktacker
that can do this, and i mean one the work independant of a computer
or anything else

Thanks

YES, the additonal money would be worth it. I have the original Rat Shack discone and was sadly disappointed in it's quality. The cone rods are not solid, so they are very easily breakable. I've been looking for solid rods that I can put threads on to replace those with. On the other hand, I just ordered the coil and whip assembly for $6 from Rat Shack. The coil and whip go on their new model discone and should fit quite nicely on my old model.

The customer is right because he found a good deal in a pawn shop on a product that is no longer legally made or sold? The "idiot sales droid" sold the man exactly what he wanted. This "customer" even admitted the PRO-64 was just what he wanted - until he "got lucky at the pawn shop". Who said anybody is underpaid - I said the poster was stealing the saleperson's time and money by returning something that had NOTHING wrong with it aside from the fact that he found a new toy. The salesman could have been selling something to somebody who wasn't playing little boy games on somebody else's nickel. Then he posts it on the net and wants me to applaud him. Do you suppose the guy told the salesman he just wanted to play with the PRO-64 for a few weeks while he looked for something else? Just because Radio Shack employees work for low wages doesn't give one a license to insult them and lie to them and then brag about how cool one is for doing it.
If you want to be a bigot, go right ahead. It is easy to throw around insults and call names here. I can't imagine you would think this was such a great story if the guy had said he got lucky at the pawn shop and would refuse a COD or stop payment on a check for a scanner he bought from YOU on this NG! Heck that would only cost you a few bucks and an hour or two of your worthless time, no biggie, right?
No wonder people are wary about buying things on the net, they know how many people like you think it's just fine to cheat anybody who will let them do it.
So if you hate Radio Shack and the people who work there, why not deal

with Best Buy? Because Best Buy has a written "NO RENTALS" policy, that's why! I bet you steal extra newspapers from vending machines and laugh at THEM too.
